READING GUIDE

This report — *how to read it*

1 **Start here: Mental Index & Archetype** (next page)
Your overall score and archetype — a 2 minute read, direct insight into your mental profile.

2 **Then go to Priorities + Action plan** (page 11–12)
Three concrete priorities and an action plan for before, during and after the round. Cut out the tear-off card — take it to the course (in your bag or to a partner).

3 **Use Part 2 as a reference or with your coach**
Per step a scene on the course you will recognise, your five components and concrete drills — then your four factors with their lenses. Ideal to share with a teaching professional or sport psychologist before a session.

The holes and moments we describe are recognisable example situations based on your answers — not rounds we watched, but a mirror of how you describe yourself on the course.

YOUR 8 STEPS — QUICK GUIDE

Focus ★ Strongest step	7.2/10
Concentration	6.6/10
Conviction ▼ Biggest opportunity	3.8/10
Trust	5.4/10
Evaluation	6.1/10
Acceptance	6.8/10
Analysis	5.9/10
Transfer	5.0/10

HOW DO YOU READ A SCORE?

7.0–10	**Strength** — build on this; use it as an anchor under pressure.
4.0–6.9	**Working area** — functional but inconsistent; focused attention pays off.
0–3.9	**Growth area** — most to be gained here; this step costs you energy now.

'Strongest step' and 'biggest opportunity' compare your steps with each other; strength, working area and growth area say where a score sits on the scale.

WHERE YOUR MENTAL INDEX (5.8) SITS

0–3.9 · Growth area | Working area | 7.0–10 · Strength

MENTAL INDEX & ARCHETYPE

MENTAL INDEX

The higher your Mental Index, the stronger you experience your own mental game

You can prepare a sensible shot and still feel your hands tighten over it; your Mental Index of 5.8/10 reflects that unevenness. You have useful habits already, but they do not yet accompany you reliably through the whole shot.

YOUR ARCHETYPE

The Strategist

You win holes before you swing. Your plan is your edge.

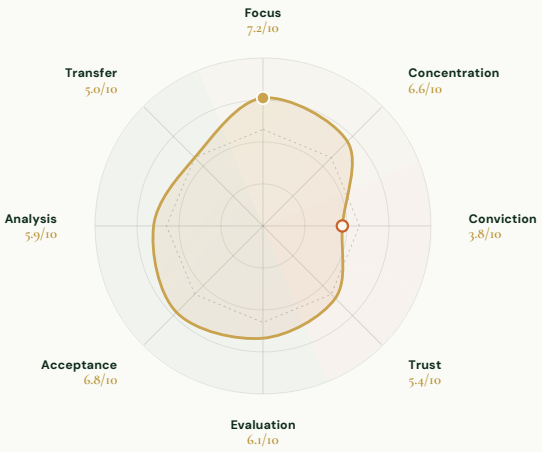

"Golf is a game that is played on a five-inch course — the distance between your ears."

— BOBBY JONES

MENTAL FINGERPRINT

Your unique *mental profile*

THE STRATEGIST

PRE-SHOT SWING POST-SHOT

YOUR THREE PHASES

Pre-Shot	Focus · Concentration	6.9/10
Swing	Conviction · Trust	4.6/10
Post-Shot	Evaluation · Acceptance · Analysis · Transfer	6.0/10

YOUR FOUR INFLUENCING FACTORS

Risk appetite	5.2/10
Pressure	4.6/10
Resilience	6.4/10
Readiness	6.0/10

Not steps, but the conditions that decide whether your routine holds. Covered in Part 2.

5.8
MENTAL INDEX

The further a point sits from the centre, the stronger that step. Your silhouette shows at a glance where your foundation lies — and where the most is to be gained.

INTRODUCTION

Welcome to *your report*

FOR YOU

You might recognise the moment when you have chosen the club but are still asking yourself whether you can hit it. This report gives that moment some attention without turning it into a verdict on your golf. The scenes are examples drawn from your answers, not a record of an observed round. Take what feels familiar onto the course and let your next few rounds add the detail.

WHAT YOUR SILHOUETTE SAYS

You can stand on a narrow tee and find a sensible way to play the hole. Once you address the ball, you do not always feel ready to commit to that choice. You generally keep a disappointing result in perspective, although you do not always carry what you learn into your next round. Your next step is simple: pick your target, back your choice for one swing, and take one useful lesson into your next round.

Where the shape bulges outward lies your foundation. Where it caves in lies the most gain. Part 2 tells you per step what to do about it.

"If I commit to the shot and trust my routine, the result takes care of itself."

— ANNIKA SÖRENSTAM

ABOUT THIS REPORT

How does *the MentalRoutine work?*

THE MODEL AND THIS REPORT

The model is built on sport-psychology research — how you steer attention, handle tension and stay motivated — and tested on more than 1,000 golfers, from handicap 0 to 36+. The next page shows at a glance how it fits together: three phases, eight steps with five components each, and four influencing factors with four lenses each. The report has two parts. Part 1 is your portrait: what your scores say, where your strength lies and where you start. Part 2 is your reference: every step and then every factor worked out in full, with exercises.

HOW YOUR SCORES ARE BUILT

You answer a series of questions about your routine and the factors around it — 20 to 25 minutes in all. Per step we measure five components (forty in all) and per influencing factor four sub-factors (sixteen in all). Every score is a mark from 0 to 10, based on the maximum attainable score on that component — so you see at a glance where you are strong and where the most room lies. The Mental Index (0–10) sums your eight steps in one number.

Important: these scores measure how you experience your own game — not an outside, measured performance. Read a 10 as "the top of the scale", not as perfection. Because it reflects your own experience, the scores point you straight to where it chafes for you.

THIS REPORT IS UNIQUE TO YOUR PROFILE

The course scenes, comparisons and advice in this report are not generic — they are built from your own answers and handicap (14.2). It works for golfers at every level, from handicap 0 to 36+. There is no "right" or "wrong" mental profile. This report helps you understand yourself better; it is not a medical or psychological diagnosis. Struggling with severe tension or stress around your game? Speak to a sport psychologist.

THE MODEL

One routine. Eight steps. *Every shot.*

Not eight separate parts, but one routine you run in the same order on every shot — and the terrain that routine has to get through. The shot routine tells you when something happens (before, during or after the shot), the mental routine what you do at that moment, and the influencing factors what makes it easier or harder.

PRE-SHOT		SWING		POST-SHOT			
1	2	3	4	5	6	7	8
Focus	Concentration	Conviction	Trust	Evaluation	Acceptance	Analysis	Transfer

Risk appetite 5.2
Interferes with your target and plan: the risk you accept before the shot.

Pressure 4.6
Interferes with conviction and a free swing: under real pressure your game falls back on what is ingrained.

Resilience 6.4
Interferes with processing after the shot — and decides whether a miss carries into the Focus of your next shot.

↻ *Step 8, Transfer, hands the next shot its Focus — that is how the loop closes.*

READINESS — THE FOUNDATION 6.0
Your capacity to run any of this at all: built over time, plus your state today. Readiness is not one point in the loop, but the ground under every step.

HOW TO USE THE MODEL — FOUR QUESTIONS FOR EVERY SHOT

1 · When?
THE SHOT ROUTINE
Before, during or after the shot: three phases.

2 · Which step?
THE MENTAL ROUTINE
Eight steps, each with five trainable components — forty in all.

3 · What was in play?
THE INFLUENCING FACTORS
Four factors, each seen through four lenses: knowledge, context, dialogue and self — sixteen in all.

4 · What now?
ONE ACTION
One exercise, cue or reset for the next comparable shot. You find them per step and per factor in Part 2.

Together 56 measurement points: 40 in your routine, 16 in the factors around it. Every piece of advice in this report works on one of them.

THE SHOTROUTINE

Pre-Shot · Swing · *Post-Shot*

Behind the ball, you usually give yourself a clear route and a sensible club. Your Pre-Shot phase is your anchor, while the Swing phase is where belief and execution become less settled. Afterwards, you often regain perspective more readily than you turn the experience into something useful for next time.

PRE-SHOT
Preparation
6.9/10

FOCUS
CONCENTRATION

You prepare at 6.9/10, usually weighing the trouble and picturing your route before you address the ball.

Influenced by: **Risk appetite** 5.2/10

SWING
Execution
4.6/10

CONVICTION
TRUST

You move into execution at 4.6/10, with belief in your choice less settled than the choice itself.

Influenced by: **Pressure** 4.6/10

POST-SHOT
Processing
6.0/10

EVALUATION
ACCEPTANCE
ANALYSIS
TRANSFER

You process shots at 6.0/10, often recovering your perspective without consistently keeping a useful lesson.

Influenced by: **Resilience** 6.4/10

Readiness 6.0/10 — the foundation under all three phases

ENERGY LEAK

Between Pre-Shot and Swing, you can move from picturing a safe landing area to wondering whether you can deliver the shot. Between Post-Shot and your next round, a useful observation can disappear without becoming something you actually practise.

PART 1 · THE BIG PICTURE

A Good Decision, An Unfinished Yes

You choose a hybrid on a tight par four, picture the widest part of the fairway, then hover over the ball waiting to feel certain. Alex, your Focus at 7.2/10 is a strength you can build on: you can give that clear target your full attention. With your Conviction at 3.8/10, a useful first step is to commit to your choice for just one swing. You do not need to feel certain about the outcome.

> *You can choose a sensible shot without feeling certain of its outcome.*

STRONGEST STEP

Focus

7.2/10

Use your clear picture of a playable route when the next hole looks intimidating, and choose the club that suits that shot. Take the same strength to your short game: pick a landing spot before you make your practice swing.

BIGGEST OPPORTUNITY

Conviction

3.8/10

"Back your chosen shot."

Alex, use this on the sixth hole after reading your five-foot par putt, just before placing the putter behind the ball.

YOUR NEXT STEPS

Three routes *forward*

ROUTE 01

More *enjoyment* in the game

After a pulled approach, you want to walk towards the green without replaying your hands through impact. This route helps you leave disappointment behind and notice the good shots before the next worry arrives. You would work towards a round that feels less like a running examination.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · CONVICTION · TRANSFER

Acceptance helps you leave a disappointing result where it happened, while Conviction makes standing over the next ball less uncomfortable. Transfer gives your reflection an ending: one useful note, then put the card away.

ROUTE 02

Better *performance*

From a good fairway lie, you want the club in your hands to feel like a decision already made. This route concentrates on backing the sensible shot, allowing the swing to happen and checking what you can learn afterwards. For your game, dependable execution matters more than adding a more ambitious option.

GIVE THESE STEPS PRIORITY

CONVICTION · TRUST · TRANSFER

Conviction addresses the hesitation before movement, and Trust addresses the urge to interfere once movement starts. Transfer then helps you bring evidence from those shots into your next practice session.

ROUTE 03

Enjoyment & performance

You want to care about a par putt without making it a test of your whole game. This route combines a more definite start to the shot with a kinder, clearer response afterwards. You keep the interest of playing for a score without carrying every result around the course.

GIVE THESE STEPS PRIORITY

CONVICTION · ACCEPTANCE · TRANSFER

Conviction helps you take the shot on, Acceptance makes room for the result, and Transfer gives the experience a useful destination. Together, they suit your wish to improve without turning a club round into homework.

PRIORITIES

Where to begin — *your focus*

LEVERAGE YOUR STRENGTHS

FOCUS | ACCEPTANCE | CONCENTRATION

Use Focus to picture a generous landing area when the fairway looks narrow, then set your clubface to it. Draw on the steadier parts of Acceptance after a missed green by walking towards your next playable position. Use your ability to park distractions during preparation by letting a passing conversation finish before you address the ball.

HANDLING YOUR OPPORTUNITIES WELL

TRUST | TRANSFER | CONVICTION

Start with Conviction by naming the shot you are willing to play before stepping in. Add Trust only once that feels familiar, using a practice swing to rehearse the finish rather than another correction. Add Transfer by writing down one example of a chosen shot you backed and taking that note to the range.

YOUR TOP 3 PRIORITIES NOW

1. Build Conviction now by backing one familiar shot before stepping in, giving your sensible choices a definite starting point.
2. Develop Trust next by rehearsing a balanced finish, then letting your chosen club move without a last-second correction.
3. Strengthen Transfer by keeping one example of backing your choice and recreating that shot during your next practice.

YOUR 4 WEEKS — STEP BY STEP

WEEK 1
Name one familiar shot you back before stepping in on three tees.

WEEK 2
Keep that choice, then add a balanced finish on those tee shots.

WEEK 3
Add one written lesson about backing your choice after each round.

WEEK 4
Link your chosen shot, balanced finish and written lesson across nine holes.

GETTING TO WORK

Your personal *action plan*

MEASURE IT ON THE COURSE — THIS ROUND

☐ Count tee shots where you name your intended shot before stepping in, then address the ball without reopening your choice.

☐ Count those tee shots where you hold your finish until the ball lands.

☐ Record whether you take one written lesson into your next practice and rehearse it with five balls.

TEST THIS REPORT'S CORE YOURSELF

☐ Tally shots across three rounds: clear plan or unclear plan, followed by hesitation or a definite start. If hesitation follows clear plans more often, this picture fits your game; if not, adjust it to what you actually record.

Before

THE ROUND

- Choose a familiar tee-shot shape and write its name at the top of your card.
- Rehearse three balanced finishes with the club you expect to use from the opening tee.
- Leave one blank line on your card for a lesson about a shot you backed.

During

ON THE COURSE

- Name your intended ball flight behind the ball before three selected tee shots.
- Hold your finish on those shots until the ball lands, provided your footing is secure.
- Mark one shot worth remembering beside its hole number when you reach the next tee.

After

REFLECTION

- Write one sentence about what helped you start a chosen shot without another check.
- Circle one example where you allowed the swing to finish without trying to rescue it.
- Put the card in your practice bag and recreate your chosen example with five balls next time.

TAKE THIS TO THE COURSE · PUT IT IN YOUR BAG

PRE-SHOT CUE	Set your clubface, look once, then settle your feet.
RESET LINE	Lower your shoulders and walk towards the ball.

YOUR PROMISE SHEET

Alex

Alex, your answers describe someone who wants to give a shot proper thought rather than simply hope for the best. You also describe how uncomfortable it can feel when that thought has not brought the reassurance you wanted. You deserve to enjoy the moment a well-chosen shot leaves the club, even when golf sends it somewhere disappointing. You are a thoughtful golfer learning to stand behind your own decisions.

YOUR MAIN MANTRA — THE LINE FOR THIS ROUND

> *"Back your chosen shot."*

"The mind messes up more shots than the body."

— TOMMY BOLT

DEEP DIVE

Questions to *think about*

Write your first thoughts below. There are no right or wrong answers — only honest ones. You need not answer them straight away — feel free to come back later.

ON YOUR STRONGEST STEP — FOCUS

Where could you use your clear picture of the shot more deliberately: a tee shot, a recovery or a chip?

ON YOUR BIGGEST OPPORTUNITY — CONVICTION

What are you still asking the shot to prove after you have already chosen it?

OVERALL — YOUR COMPLETE PROFILE

What would you notice during a round if backing your choice mattered more than feeling certain?

YOUR INTENTION FOR THE NEXT ROUND

Which single mental habit will you build in over the next four weeks? Describe when, how and what for.

PART 2 OF THE REPORT

Your Complete *Profile*

Per step and per factor — worked out in full

In this part each of your eight steps is worked out in full: a scene on the course you will recognise, your score, the five components read personally, concrete advice, two exercises and a mantra. Then come your four influencing factors, each with the four lenses. Use Part 2 as a reference — or share it with your coach.

THE EIGHT STEPS

1. Focus	7.2	**17**
2. Concentration	6.6	**19**
3. Conviction	3.8	**21**
4. Trust	5.4	**23**
5. Evaluation	6.1	**25**
6. Acceptance	6.8	**27**
7. Analysis	5.9	**29**
8. Transfer	5.0	**31**

THE FOUR FACTORS

Risk appetite	5.2	**34**
Pressure	4.6	**36**
Resilience	6.4	**38**
Readiness	6.0	**40**

FOR YOUR COACH — IN 90 SECONDS

BIGGEST GAIN	Your biggest opportunity is backing familiar shot choices before address, then recognising an unsteered swing independently of its result.
CORE DIAGNOSIS	You report clear tactical commitment but weaker belief at address; explore whether an extra target check signals doubt about execution rather than an unresolved choice.
START QUESTION	*"What are you hoping one more look will give you after you have chosen the shot?"*

Every step has its own story.
This one is yours.

STEP 1 OF 8 · PRE

Focus

Influenced by: Risk appetite 5.2/10 · Readiness — the foundation

7.2/10

STRENGTH ★ Strongest step

A STRONG SIDE OF YOUR GAME

"You give a difficult hole a sensible shape before picking your club."

> *On the second, a steady crosswind pushes towards the fairway bunker, with 165 yards left. You picture a lower shot towards the broad left side and feel your grip settle. You finish on the front apron with a straightforward chip.*

DEFINITION

You pick the target area, settle your club choice and see the ball flight before you swing. This includes course management: how do you play the hole strategically, in a way that suits your own game? Focus must be fully finished before you move on to concentration.

From an awkward approach, you can picture a playable route rather than fixating on the trouble. Your 7.2/10 is a strength you can deliberately bring to recovery shots and chips.

BLIND SPOT?

A score this high is a strength — but check it once with your pro: does your focus feel as strong on the course as it scores on paper?

ON THE CARD · YOU TEND TO MAKE AWKWARD HOLES FEEL MORE MANAGEABLE BY FINDING A ROUTE YOU CAN EXPLAIN.

You give yourself a clear, sensible choice before the club goes behind the ball.

IF YOU DO JUST ONE THING **Use your shot picture to choose a generous landing area before setting your clubface.**

You aim an approach towards the broad centre of the green rather than automatically choosing the flag.

THE FIVE COMPONENTS OF FOCUS

Pick a target · START HERE — WORKING AREA

Pick a target varies: you sometimes settle on the green rather than a precise landing patch.

See the shot — STRENGTH

With See the shot, you clearly picture a lower flight before selecting your approach club.

Judge it honestly — STRENGTH

Judge it honestly helps you choose a comfortable carry instead of stretching your usual distance.

Weigh the risk — STRENGTH

You use Weigh the risk well when choosing the wider side of a guarded green.

Commit to it — STRENGTH

Commit to it shows in your clear tactical choice of a sensible club from behind the ball.

You picture the flight, check your carry and weigh the trouble; a precise landing patch gives that sound choice an even clearer destination.

PRIMARY ADVICE

Use your clear shot picture on recovery shots by choosing the next comfortable lie before taking your club from the bag.

Extra tip: *Extend your risk judgement to chips by picking the landing area that leaves the widest margin.*

MENTAL DRILL 1

Picture the lower approach and choose your landing area on three closing holes. Count success when you name both before selecting your club on all three. Then repeat during a scored round.

MENTAL DRILL 2

Choose a landing patch before chipping at the practice green. Hit eight balls, changing targets each time. Succeed by naming the patch before every setup. Then take that preparation onto three different greens.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Choose the landing area first."

STEP 2 OF 8 · PRE

Concentration

Influenced by: Risk appetite 5.2/10 · Readiness — the foundation

6.6/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You can shut out the conversation more easily than your own running commentary."

> *On the fourth tee, you wait with a five-wood as the group ahead clears. You notice the crosswind but start wondering whether your opening bogey matters. You step in quickly, your jaw tight, and send the ball towards the right rough.*

DEFINITION

You put all your attention on that one task — the ball to the target area — and shut out everything that is irrelevant right now: the last shot, the state of the match, outside noise and inner doubt.

While waiting to play, you can usually leave outside distractions alone. At 6.6/10, Concentration is a working area because thoughts about the round still sometimes enter your setup.

> ON THE CARD · YOU TEND TO RUSH YOUR SETUP WHEN THOUGHTS ABOUT THE ROUND ARRIVE BEFORE THE SHOT.
>
> *You prepare more calmly when the previous hole stays out of your address position.*

02

IF YOU DO JUST ONE THING **Pause behind your ball until you can describe only the shot ahead.**

You let a nearby conversation finish, then return your attention to the ball instead of the previous hole.

THE FIVE COMPONENTS OF CONCENTRATION

Stay with it · START HERE — WORKING AREA

Stay with it varies when a long wait sends your attention back to an earlier bogey.

Park distractions — STRENGTH

Park distractions works well when you let nearby conversation pass before setting up.

Eye on ball — WORKING AREA

With Eye on ball, your gaze sometimes returns to trouble after you have addressed it.

Reset — WORKING AREA

Reset is nearly dependable, but you occasionally step in before your attention has returned.

Relax between shots — WORKING AREA

You manage Relax between shots unevenly, sometimes carrying the score through an otherwise pleasant walk.

When you relax between shots, distractions are easier to park; without that pause, your reset can finish before your attention returns to the ball.

PRIMARY ADVICE

Stand behind the ball while you wait, then begin your setup only when the fairway is clear.

Extra tip: *Unclench your jaw before addressing the ball whenever you catch yourself reviewing the score.*

MENTAL DRILL 1

Soften your jaw before addressing a range ball. Repeat with eight balls, stepping away between each. Succeed when you complete seven without restarting your setup. Then use it on three waiting tees.

MENTAL DRILL 2

Wait behind your ball until your attention returns to the intended shot. Use three tee shots. Count success when you step in without rehearsing the previous hole. Then extend it to six tees.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Stay with this ball."

STEP 3 OF 8 · SWING

Conviction

Influenced by: Pressure 4.6/10 · Readiness — the foundation

3.8/10

GROWTH AREA

▼ Biggest opportunity

ROOM TO GROW IN THIS STEP

"You can know the shot and still wait for permission to play it."

> *On the sixth, you read a five-foot putt for par and choose the left edge. You know that pace, but think, 'Don't waste this chance,' and tighten your fingers. You take another look, then leave the putt short.*

DEFINITION

You are convinced you will hit the shot exactly as intended. You want it, you can do it, you do it. Doubt is useless and has to be switched off completely, because without conviction there is no good performance.

You already know how to choose a familiar shot. Conviction at 3.8/10 is a growth area: you often reach address still asking whether you can deliver it.

> ON THE CARD · YOU CAN REACH A PLAYABLE SHOT STILL FEELING THAT YOU NEED PERMISSION TO ATTEMPT IT.
>
> *You feel more willing to play when your chosen shot receives a definite yes.*

03

IF YOU DO JUST ONE THING **Back your chosen putt by setting the face before taking another look.**

You choose a putting line, then stand over the ball believing that line deserves a proper stroke.

THE FIVE COMPONENTS OF CONVICTION

Believe in it · START HERE — GROWTH AREA

You recognise familiar shots; Believe in it falters when you seek reassurance over the ball.

Fully commit — WORKING AREA

Fully commit varies when you choose a putting line but revisit it at address.

Fire yourself up — GROWTH AREA

Fire yourself up needs a small start: you approach a par chance thinking mainly about missing.

Take it on — WORKING AREA

With Take it on, you sometimes back a sensible approach and sometimes wish for another option.

Back yourself — GROWTH AREA

Back yourself needs support when your fingers tighten before a putt you have made before.

You can take on a familiar shot, yet weak belief makes full commitment harder; a clear, encouraging cue helps you back the choice before moving.

PRIMARY ADVICE

Choose one familiar shot on a comfortable tee, name it quietly and place your club behind the ball.

Extra tip: *Rehearse the pace of a short putt once, then set your putter to the line you selected.*

MENTAL DRILL 1

Set your putter to your chosen line without another read. Roll six five-foot putts. Succeed when you begin five without reopening the choice. Then use it for three putts during a round.

MENTAL DRILL 2

Name a familiar ball flight before stepping into each range shot. Hit eight balls with your seven-iron. Succeed when six start without another decision. Then repeat with your usual tee club.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You can roll this at the hole."

STEP 4 OF 8 · SWING

Trust

Influenced by: Pressure 4.6/10 · Readiness — the foundation

5·4/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

"You sometimes try to look after the ball while the club is moving."

> *On the eighth, you have a seven-iron from a clean fairway lie in the same crosswind. You try to prevent the rightward miss from earlier, and your forearms stiffen. You guide the club through and pull the approach left of the green.*

DEFINITION

You hit the shot with full commitment: no hesitation, nothing held back. This is 'stand there and do it'. The prep is done; now the loyal execution, with the right balance of power and calm.

From a good lie, you sometimes allow your usual swing to happen. Trust at 5.4/10 is a working area because the urge to prevent a miss can still stiffen your delivery.

ON THE CARD · YOU TEND TO LOSE FREEDOM WHEN PREVENTING A MISS BECOMES PART OF THE SWING ITSELF.

You swing more freely when you stop trying to protect the result during movement.

04

IF YOU DO JUST ONE THING **Rehearse a balanced finish, then let your swing reach it without a correction.**

You allow the rehearsed swing to happen instead of trying to redirect the club halfway down.

THE FIVE COMPONENTS OF TRUST

Don't steer · START HERE — WORKING AREA

Don't steer varies when your forearms stiffen to keep an approach away from the right rough.

No swing thoughts — WORKING AREA

With No swing thoughts, you sometimes play freely and sometimes carry a correction into takeaway.

Hit your plan — WORKING AREA

Hit your plan is inconsistent when your rehearsed finish gives way to a protective swing.

Stay loose — WORKING AREA

Stay loose varies as an important approach makes your grip firmer than it was in rehearsal.

Practise on purpose — WORKING AREA

You manage Practise on purpose unevenly, sometimes repeating seven-irons without changing the target.

Purposeful rehearsal gives you a familiar movement; when your grip stays comfortable, you need fewer swing thoughts and can follow the plan without steering.

PRIMARY ADVICE

Make one practice swing to a balanced finish, then address the ball with that movement in mind.

Extra tip: *Ease your forearms before takeaway by briefly lifting the clubhead clear of the grass.*

MENTAL DRILL 1

Swing your seven-iron to a balanced finish without protecting against the right miss. Hit eight range balls. Hold six finishes until the ball lands. Then repeat with three different targets.

MENTAL DRILL 2

Rehearse one free finish beside your ball before an approach. Use three approaches during a practice round. Count success when each finish resembles its rehearsal. Then extend the exercise to six approaches.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Let the club swing through."

STEP 5 OF 8 · POST

Evaluation

Influenced by: Resilience 6.4/10 · Readiness — the foundation

6.1/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You often know the miss before you have watched all of it."

> *On the tenth, you pitch from 35 yards towards a central flag. You feel a slightly thin strike and look down before the ball stops. When it finishes beyond the hole, you blame the contact without noticing how far it released.*

DEFINITION

You note objectively what the ball did — strike feel, sound, direction, ball flight, distance, where it finished, divot — and match it against your Focus plan. This sets up the Analysis.

After a miss, you can often describe its direction sensibly. Evaluation at 6.1/10 is a working area because your first verdict sometimes arrives before the ball has finished moving.

ON THE CARD · YOU CAN MAKE A MANAGEABLE MISS FEEL WORSE WHEN YOUR VERDICT ARRIVES BEFORE THE FULL PICTURE.

You carry less uncertainty when you describe the shot rather than immediately judging yourself.

05

IF YOU DO JUST ONE THING **Keep your eyes on the ball until it stops before describing the result.**

You describe a putt as finishing right and long rather than simply calling it terrible.

THE FIVE COMPONENTS OF EVALUATION

Watch closely · START HERE — WORKING AREA

Watch closely varies when disappointing contact makes you look away before the ball stops.

Judge the miss — WORKING AREA

With Judge the miss, you usually find the direction but do not consistently judge the distance.

Stay level-headed — WORKING AREA

Stay level-headed varies when a thin pitch prompts a harsher verdict than its finishing position deserves.

Check your plan — WORKING AREA

Check your plan is inconsistent when you overlook whether the ball landed on your chosen patch.

Fixed order — WORKING AREA

You use Fixed order unevenly, sometimes judging contact before checking flight, landing and finish.

If you look away early, your miss judgement lacks detail; that makes it harder to stay level-headed and compare the outcome with your original plan.

PRIMARY ADVICE

Rest the clubhead on the ground, breathe out slowly, then watch the ball finish before naming its direction and distance.

Extra tip: *Compare where your pitch first landed with the patch you chose before deciding what went wrong.*

MENTAL DRILL 1

Watch each pitch finish before describing landing and rollout. Hit eight balls from 35 yards. Succeed when you describe both on seven attempts. Then repeat from a different lie.

MENTAL DRILL 2

Point your club towards the finishing position after an approach. Use four approaches on the course. Succeed when you name direction and distance before judging contact. Then extend it to nine holes.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Watch until the ball stops."

STEP 6 OF 8 · POST

Acceptance

Influenced by: Resilience 6.4/10 · Readiness — the foundation

6.8/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You keep golf in perspective, though an unfair bounce can stay with you."

> *On the twelfth, your approach catches the green's edge and rolls into a bunker. You know the crosswind played a part, yet your shoulders drop as you walk. You recover onto the green but are still rehearsing the unlucky bounce.*

DEFINITION

You accept the outcome of your shot, good or bad. It happened; you cannot change it any more. Emotions are allowed, but they have to be dealt with before you move to the next shot.

You usually keep disappointment from becoming an attack on yourself. Acceptance at 6.8/10 remains a working area because an unlucky result can still occupy you during the walk.

ON THE CARD · YOU USUALLY RECOVER YOUR PERSPECTIVE, BUT AN UNLUCKY RESULT CAN MAKE THE WALK FEEL HEAVIER.

You enjoy the next part of the hole more when disappointment finishes before you arrive.

06

IF YOU DO JUST ONE THING **Open your trailing hand, breathe out slowly and walk towards your next lie.**

You feel annoyed by a bunker bounce but reach the sand ready to play the next shot.

THE FIVE COMPONENTS OF ACCEPTANCE

Let go · START HERE — WORKING AREA

Let go varies when you keep revisiting an awkward bounce on the walk to your ball.

Be kind — STRENGTH

Be kind is a strength: you can miss a green without calling yourself a poor golfer.

Keep perspective — WORKING AREA

Keep perspective varies when an unlucky result briefly feels bigger than the hole itself.

Play on — STRENGTH

Play on works well as you prepare the bunker shot rather than abandon the hole.

Enjoy good shots — WORKING AREA

You manage Enjoy good shots unevenly, sometimes reaching for your bag before appreciating a pleasing approach.

Your kindness helps you keep playing; letting the particular result go makes perspective easier and leaves more room to enjoy the next good shot.

PRIMARY ADVICE

Return your club to the bag, let your shoulders settle and breathe out slowly before walking to the next lie.

Extra tip: *Give a good shot a moment of attention by watching its finish before reaching for your bag.*

MENTAL DRILL 1

Open your trailing hand after a disappointing practice shot, then exhale slowly. Use six shots. Succeed when your hand opens before your first verdict each time. Then repeat after three on-course misses.

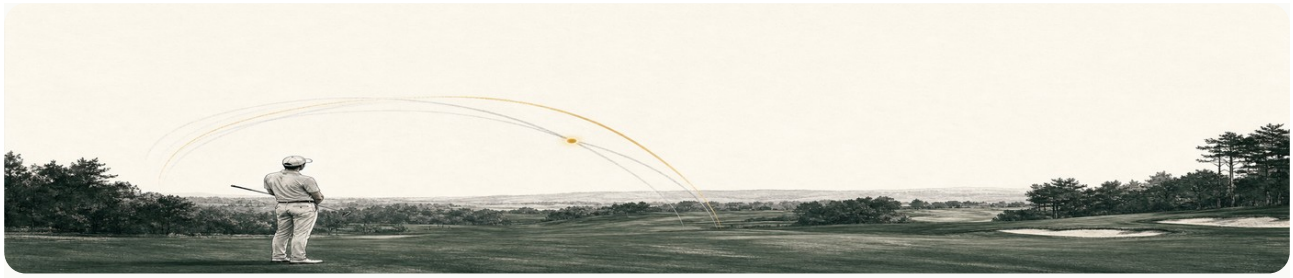

MENTAL DRILL 2

Walk to your next lie without retelling an unlucky bounce. Use three disappointing results during a round. Succeed when your first words describe the next shot. Then extend it across nine holes.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Leave that bounce behind."

STEP 7 OF 8 · POST

Analysis

Influenced by: Resilience 6.4/10 · Readiness — the foundation

5·9/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You look for an answer, but sometimes choose the swing before checking the decision."

> *On the fifteenth, you leave a 20-yard chip short from a clean lie. You think about your wrists, then remember the stiff forearms on the eighth. You rehearse a technical fix without deciding whether you doubted the landing spot or changed the stroke.*

DEFINITION

You compare the shot you hit with the shot you had in mind during Focus. You look for the main cause of any difference — mental as well as technical — and draw one clear conclusion.

You can narrow a disappointing shot down to a sensible cause. Analysis at 5.9/10 is a working area because you sometimes reach for a technical explanation before checking your decision.

ON THE CARD · YOU CAN LEAVE A HOLE WITH UNNECESSARY SWING QUESTIONS WHEN THE DECISION HAS NOT BEEN CHECKED.

You finish a hole with a clearer head when one useful cause replaces several competing explanations.

07

IF YOU DO JUST ONE THING **Check whether you backed the shot before choosing one cause to practise.**

You distinguish a poor strike from a changed decision before choosing what to practise.

THE FIVE COMPONENTS OF ANALYSIS

Mental or technical? · START HERE — WORKING AREA

Mental or technical? varies when you blame your wrists before checking whether you backed the chip.

One cause — WORKING AREA

One cause is inconsistent when a short chip leaves you considering both pace and wrist action.

Spot the pattern — WORKING AREA

With Spot the pattern, you sometimes connect protective swings but overlook similar hesitation on putts.

Diagnose honestly — WORKING AREA

Diagnose honestly varies when a technical explanation feels easier than admitting you changed your mind.

Ask for help — WORKING AREA

You manage Ask for help unevenly, sometimes practising a suspected fault before showing your pro.

Checking the decision first narrows your search; one honest cause makes repeated patterns clearer and gives your pro a specific question rather than several guesses.

PRIMARY ADVICE

Set your club against the bag, breathe out slowly, then ask whether you changed your decision or your movement.

Extra tip: *Choose one cause after the hole and rehearse only that change once beside the next tee.*

MENTAL DRILL 1

Check whether you backed the landing spot before blaming your wrists. Hit six practice chips. Succeed when you choose one explanation after each. Then repeat with six pitches from a longer distance.

MENTAL DRILL 2

After a disappointing shot, wait until the hole ends before choosing one cause. Use three holes. Succeed when each explanation fits one sentence. Then discuss the clearest example with your pro.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Check the decision before the swing."

STEP 8 OF 8 · POST

Transfer

Influenced by: Resilience 6.4/10 · Readiness — the foundation

5.0/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

"You notice useful moments, but do not always carry them into your next round."

> *On the seventeenth, you find the fairway with a controlled hybrid in the same crosswind. You think, 'That felt easier,' but hurry towards your ball. By the next tee, you remember the short chip more clearly than what made this swing comfortable.*

DEFINITION

You give meaning to what the Analysis showed and carry it forward — you store it as an insight for after the round. That way you get to know your strengths and weaknesses over time and know exactly what to work on.

You sometimes leave the course with a useful observation. Transfer at 5.0/10 is a working area because that observation does not consistently become something you rehearse next time.

> ON THE CARD · YOU CAN FINISH WITH USEFUL EXPERIENCE THAT NEVER BECOMES PART OF YOUR NEXT PRACTICE.
>
> *You leave the round feeling more settled when one lesson has somewhere practical to go.*

IF YOU DO JUST ONE THING **Write one repeatable detail from a useful shot before leaving the course.**

You record one lesson after a round and use it to shape your next practice session.

THE FIVE COMPONENTS OF TRANSFER

Misses teach you · START HERE — WORKING AREA

Misses teach you varies when a short chip stays a disappointment rather than a practice reminder.

Look back — WORKING AREA

With Look back, you sometimes review the round but struggle to select its most useful moment.

Turn miss to aim — WORKING AREA

Turn miss to aim is inconsistent when you remember the error without choosing what to rehearse.

Find the fix — WORKING AREA

Find the fix varies when you notice an easier swing but do not recreate its preparation.

Keep one lesson — WORKING AREA

You manage Keep one lesson unevenly, sometimes leaving several thoughts instead of one written reminder.

When you turn a miss into one clear practice aim, looking back becomes useful; testing that aim gives you a lesson worth keeping.

PRIMARY ADVICE

Sit down after the round, breathe out slowly and write one detail you can recreate with a club.

Extra tip: *Place that note beside your range basket and use your opening five balls to rehearse its lesson.*

MENTAL DRILL 1

Record what made your controlled hybrid feel easier. Keep one sentence after each of three rounds. Succeed when each note names a repeatable action. Then rehearse the latest action with five range balls.

MENTAL DRILL 2

Recreate one lesson from a previous miss at the range. Hit six balls using that lesson. Succeed when you can name what changed on four. Then bring the same lesson to your next round.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Keep one lesson for next time."

PART 2 · CONTINUED

The four influencing factors

You have now seen your eight steps — the mental routine itself. But how well that routine holds up depends on four factors around it, in shot order: how you weigh **risk** before the shot, how **pressure** loads your swing, how quickly you **bounce back** after the shot, and how **ready** you are — the game you have available today.

They are not steps, but the conditions that decide whether the routine holds when it gets tense. We look at each factor through the same four lenses: Knowledge (what do you know?), Context (what is true here?), Dialogue (say the shot) and Self (are you ready to hit it?). Four factors times four lenses: sixteen sub-factors.

INFLUENCING FACTOR 1 OF 4

Risk appetite

Pre-shot: club, target, line and miss

5.2/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *You have a fairway wood into a par five, with water short and room left. You can picture reaching the green, but you hesitate because your usual carry and your best carry suggest different clubs.*

WHAT THIS FACTOR IS

Risk appetite sets the shot before commitment begins: which club, which target, which line and which miss you accept. It is neither courage nor caution. With a poor risk call the atmosphere decides — mood, ego or another player — and the numbers are guessed or ignored. With a good risk call the facts decide: a known carry, a clear target and an acceptable miss, and then full commitment. Judge the decision separately from the result.

Knowledge sets odds · context sets exposure · dialogue states reasons · self carries consequences

Your Risk appetite score of 5.2 is a working area: your choices need a firmer footing in your usual game. At your 14.2 handicap, the tempting shot can be available without being dependable. You can build consistency by making your normal carry and spread easier to consult.

HOW THIS HITS YOUR ROUTINE

Primarily in the pre-shot, in Focus and Concentration: club, target, line and miss. A good pre-shot produces a target that is specific, reachable and in line with your form. Skewed by risk appetite, the choice turns too aggressive or too cautious — and that happens before the swing, not inside it. In the swing it asks for commitment to the chosen shot; after the shot, for reviewing the decision, not the score.

> *You give yourself more playable next shots when your choices reflect your usual ball flight.*

OBSERVATION POINT · WATCH SOMEONE ELSE

You can watch whether your playing partner consults recorded carry distances when choosing between clubs for a long approach.

IF YOU DO JUST ONE THING You can base your next ambitious choice on your typical carry.

THE FOUR SUB-FACTORS OF RISK APPETITE

KNOWLEDGE **Calibration** · START HERE — WORKING AREA

Your Calibration at 4.3 needs clearer evidence of your typical carry, spread and dependable shots.

CONTEXT **Exposure** — WORKING AREA

Your Exposure at 5.5 needs a fuller reading of the lie, wind, carry and available space.

DIALOGUE **Rationale** — WORKING AREA

Your Rationale at 4.9 needs a clearer connection between your evidence, club, target and line.

SELF **Tolerance** — WORKING AREA

Your Tolerance at 6.1 leaves room to accept uncertainty more consistently when choosing a shot.

PRIMARY ADVICE

You can make club selection clearer by keeping typical carry distances for your longer clubs, including ordinary strikes.

Extra tip: *Before choosing an ambitious line, you can name the miss you would genuinely accept and leave enough room for it.*

DRILL 1 · ON THE COURSE

On the range, you can hit ten balls with a long club and record carry and left-to-right spread. Keep every ordinary strike, then use the middle cluster to judge what that club usually offers.

DRILL 2 · AT HOME

At home, you can sketch a familiar approach and add your recorded shot spread around two targets. Compare where ordinary misses finish, then choose the target you would take onto the course.

OBSERVATION POINT · CALIBRATION — *"Play your percentage."*

Watch for: Chooses from memory or best-case ability; no reference to stock dispersion or actual percentages.
Ask: What percentage shot is this for you? **Probe:** What evidence from practice or recent rounds supports that?

KEY LINE FOR THIS FACTOR

"You can choose freely when you know what your usual shot actually offers."

INFLUENCING FACTOR 2 OF 4

Pressure

Swing: tension, tempo and freedom

4.6/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *You reach the last tee with a score you would like to bring home. The fairway has not changed, but your grip feels firmer and your swing starts before you feel settled.*

WHAT THIS FACTOR IS

Pressure makes the shot feel bigger than it is. It loads the routine — especially attention, tension and commitment — and is felt most in the swing: rushing, steering, a tighter grip, a shorter breath. Pressure can come from outside (a match, the cut, the final hole) or be added by yourself (the score, fear of the miss, wanting to prove something). The routine stays the same; only the load increases.

Knowledge locates the limit · context supplies load · dialogue frames meaning · self registers activation

Your Pressure score of 4.6 is a working area, especially when the moment starts to feel bigger. You may recognise the change without yet keeping your usual freedom. Start by separating what the hole actually demands from what you hope the round will mean.

HOW THIS HITS YOUR ROUTINE

Primarily in the swing: grip, breath, tempo and freedom. Conviction loses its ease and Trust is the most pressure-sensitive step of all — the urge to steer IS a pressure response. Pressure can already build in the pre-shot (outcome thinking, bodily tension); after the shot it asks you to keep the result in proportion.

> *You give your swing more freedom when a scoring chance remains an ordinary golf shot.*

OBSERVATION POINT · WATCH SOMEONE ELSE

You can watch which distances, wind conditions and match details your playing partner checks before a demanding shot.

IF YOU DO JUST ONE THING **You can name what the situation actually asks before adding any extra weight.**

THE FOUR SUB-FACTORS OF PRESSURE

KNOWLEDGE **Threshold** — WORKING AREA

Your Threshold at 5.5 suggests you are still learning when pressure starts changing your usual execution.

CONTEXT **Demand** · START HERE — GROWTH AREA

Your Demand at 3.7 needs a simpler, factual reading of what the moment requires.

DIALOGUE **Narrative** — WORKING AREA

Your Narrative at 4.9 can keep the moment smaller through more proportionate words about the task.

SELF **Arousal** — WORKING AREA

Your Arousal at 4.3 needs attention to finding a usable level of tension, tempo and energy.

PRIMARY ADVICE

When the stakes rise, you can identify the actual requirement: the carry, the time available or the match situation.

Extra tip: *You can make pressure more familiar through occasional friendly practice contests, keeping the challenge small enough to repeat willingly.*

DRILL 1 · ON THE COURSE

With a partner on the practice green, you can play six putts for a small match. Before each, state the distance and match position, then notice whether your pace of play changes.

DRILL 2 · AT HOME

At home, you can write down three demanding golf moments. For each, list only the actual requirements, such as distance, match position and time available, so you practise recognising the size of the task.

OBSERVATION POINT · DEMAND — *"Read the stakes."*

Watch for: Treats every shot as equally important — or inflates the real score, format or consequence.
Ask: What does this shot actually require? **Probe:** Which consequence is real, and which is added?

KEY LINE FOR THIS FACTOR

"You can care about the result without making this shot carry the whole round."

INFLUENCING FACTOR 3 OF 4

Resilience

Post-shot: recover, reset and learn

6.4/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *You miss a short putt after giving yourself a chance to get up and down. Walking towards the next tee, you notice the putt replaying, even though a completely different shot now needs your attention.*

WHAT THIS FACTOR IS

Resilience gets you to the next shot. It ends the carryover from the last shot and frees your attention for the next routine. As long as the previous shot is still playing — in your emotion, your tempo or your decisions — the reset is not finished. The reset is complete when you are available again for the shot in front of you.

Knowledge tracks the pattern · context selects the response · dialogue turns attention · self regains state

Your Resilience score of 6.4 is a working area with a useful starting point. You know your recovery patterns well, but getting fully available again is less consistent. You can use that knowledge to recognise the moments when the previous hole is still influencing the next.

HOW THIS HITS YOUR ROUTINE

Primarily in the post-shot: Evaluation keeps emotion calibrated, Acceptance closes the shot, Analysis turns it into information and Transfer carries one lesson forward. But carryover can also enter the next plan and disturb the next swing.

> *You keep one disappointing hole from shaping how you play the next.*

OBSERVATION POINT · WATCH SOMEONE ELSE

You can listen for your playing partner's first words about the next shot after a disappointing hole.

IF YOU DO JUST ONE THING You can make room for the next shot before chasing a better score.

THE FOUR SUB-FACTORS OF RESILIENCE

KNOWLEDGE **Trajectory** — STRENGTH

Your Trajectory at 7.3 is a strength: you know how setbacks tend to unfold across holes.

CONTEXT **Agility** — WORKING AREA

Your Agility at 6.7 needs more consistency in matching your recovery response to the situation.

DIALOGUE **Reorientation** · START HERE — WORKING AREA

Your Reorientation at 5.5 needs clearer words that close the previous shot and name what matters now.

SELF **Elasticity** — WORKING AREA

Your Elasticity at 6.1 leaves room for body, emotion and attention to regain a playable state.

PRIMARY ADVICE

You can agree with a regular playing partner to keep complaints about the previous hole away from the next tee.

Extra tip: *After a setback, you can let the next hole's actual demands determine your approach rather than trying to recover your score immediately.*

DRILL 1 · ON THE COURSE

On the practice green, you can alternate easy and awkward chips without replaying either. Notice whether disappointment changes how you approach the following ball, and practise giving each new lie your full attention.

DRILL 2 · AT HOME

At home, you can recall three rounds with setbacks and sketch where your attention returned. Look for the familiar point when frustration spreads, then decide where a playing partner's timely question could help.

OBSERVATION POINT · REORIENTATION — *"Name the next task."*

Watch for: Keeps talking about the previous shot or cannot formulate one clear next task.
Ask: What matters now? **Probe:** Can you say the next job in one sentence?

KEY LINE FOR THIS FACTOR

"You do not need to like the last shot to be available for the next."

INFLUENCING FACTOR 4 OF 4

Readiness

Whole routine: the game available today

6.0/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *You arrive after a busy morning and find your irons flying shorter than expected. By the first approach, you face a familiar choice: play the club you normally use or the game you have brought today.*

WHAT THIS FACTOR IS

Readiness is the game available today. It matches your plan to the body, swing, numbers and equipment actually present. Not ready means the plan asks for a shot you cannot reliably produce today. Ready means you can stand over the ball and execute what has actually been prepared. Play the game you brought to the first tee.

Knowledge builds the base · context tests fit · dialogue formulates the plan · self provides presence

Your Readiness score of 6.0 is a working area: your preparation does not always become a clear plan for today. You have groundwork to draw on, but your available game still needs checking. A modest adjustment before the first tee can make the whole routine feel more manageable.

HOW THIS HITS YOUR ROUTINE

Readiness runs through the whole routine: an available body, numbers and shot in the pre-shot; an available swing and trust in the swing; and available attention to learn in the post-shot.

> *You create more manageable approaches when your plan matches the game available today.*

OBSERVATION POINT · WATCH SOMEONE ELSE

You can listen for how your playing partner describes today's available shots and turns that description into a plan.

IF YOU DO JUST ONE THING You can turn today's warm-up evidence into one clear playing plan.

THE FOUR SUB-FACTORS OF READINESS

KNOWLEDGE **Foundation** — WORKING AREA

Your Foundation at 6.9 is a working area; you can make accumulated preparation and evidence more dependable.

CONTEXT **Fit** — WORKING AREA

Your Fit at 6.3 needs more consistent matching of today's capacity and equipment to the course.

DIALOGUE **Formulation** · START HERE — WORKING AREA

Your Formulation at 5.1 needs a clearer description of today's readiness and a usable playing plan.

SELF **Presence** — WORKING AREA

Your Presence at 5.7 needs body, attention, energy and intention gathered more consistently for each shot.

PRIMARY ADVICE

When your warm-up shows a shorter carry, you can adjust today's club expectations rather than wait for your usual distance to return.

Extra tip: *You can make preparation more useful by deciding which familiar shots feel available today and building your round around them.*

DRILL 1 · ON THE COURSE

Before a round, you can sample three familiar clubs and note today's carry and strike. Use those observations to write one brief plan for the game available, rather than trying to repair your swing.

DRILL 2 · AT HOME

At home, you can prepare two short plans for a familiar course: one for a rested day and one for limited energy. Give each suitable club expectations and a manageable approach to preparation.

OBSERVATION POINT · FORMULATION — *"Call today's game."*

Watch for: Cannot diagnose present readiness or state one plan that fits current capacity and conditions.

Ask: What game have you brought today? **Probe:** Say one plan that fits it.

KEY LINE FOR THIS FACTOR

"You can enjoy today's round more when you play the game you actually brought."

ONE EXTRA INTERVENTION

Learning by observing

With each of your four factors comes an **observation point**. That is no side note — it is an intervention in itself. Your sharpest insight into your own mental game often comes not from looking inward, but from *someone else* watching.

When you deliberately watch how a playing partner handles pressure, a missed putt, a risky decision, two things happen at once. You see a pattern you do not spot so easily in yourself — the tension in the shoulders on the first tee, the tempo that changes after a bad shot, the club picked too quickly. And right at that moment you become more aware of your own routine and your own factors. Observing makes the abstract concrete.

> *The beauty is: it costs you nothing extra. You already play in company. By watching one thing in someone else for one round at a time, you build an eye for the mental game — which you then turn on yourself. What you learn to spot in others, you recognise in yourself.*

HOW TO GO ABOUT IT

Pick one factor per round. In yourself or in one playing partner, watch the observation point that belongs to it. Fact first — what a camera would capture — and only then the meaning. Wait for three comparable moments before you call it a pattern. After the round, ask yourself: what did I see, and did I recognise it in myself too?

FINALLY

This is *yours now*

Alex, the next time you stand over a shot you know you can play, you do not have to wait for a completely different feeling. You can give the familiar shot a fair attempt while some doubt is still there. That small act belongs to you, regardless of where the ball finishes. Your next round is a chance to find out how it feels to play more of your golf that way.

WANT TO GO FURTHER?

The next step *in your story*

Reading a report changes nothing on the course yet — you know that. The real gain, and the real fun, only start when you pick one thing and work on it. And you do not have to do that alone.

For that, MentalRoutine builds from exactly this profile a personal **Training report**: a personal workbook of around ten pages, tuned to your scores and your level of play. No generic tips, but exercises, mantras and stories that fit where you stand now — the logical next step after what you have just read about yourself.

YOUR PERSONAL ADVICE

Where you are best *placed to begin*

We laid your full profile side by side: your eight steps with their forty components, and your four influencing factors. Below are the three topics where training pays off most for you now — your two biggest opportunities and your strongest step. The same three are waiting as advice in your portal.

YOUR THREE RECOMMENDED TOPICS

Each its own training report — together exactly the three included with your assessment.

1. Conviction
start with: Believe in it

IMPROVE
score 3.8/10

2. Transfer
start with: Misses teach you

IMPROVE
score 5.0/10

3. Focus
start with: Pick a target

LEVERAGE
score 7.2/10

OR CHOOSE AN INFLUENCING FACTOR

You can also spend one of your three reports on a factor. For you, **Pressure** (4.6/10) is the obvious choice — start there with **Demand** — *"Read the stakes."*

HOW TO START

Start with the first topic: that is where the most is to be gained. Rather go another way? In your portal you choose freely from all twelve topics.

Your training reports are waiting in your portal — that is where you choose what to pick up first.

Go to the portal →

AFTER THIS REPORT

How your *training works*

HOW A TRAINING REPORT WORKS

A STEP OF YOUR ROUTINE

Trains one of your eight steps through five angles, tuned to your score on each component. Choose this if you want to work on a part of your routine.

AN INFLUENCING FACTOR

Trains one of your four factors through the four lenses: knowledge, context, dialogue and self. Choose this if the terrain around your routine costs you most.

> Nothing extra to arrange: three training reports are included with your assessment, and you choose them yourself from all twelve topics — your eight steps and your four factors. Everything is ready in your portal, at your own pace.

TWO WAYS TO GROW

IMPROVE

With a lower score. The report motivates and builds: small, doable steps that make your weak spot stronger bit by bit. This is often the quickest gain.

LEVERAGE

With a high score. The report inspires: how do you use a strength you already have even more deliberately, so it wins you shots on the holes that count?

WHEN TO MEASURE AGAIN?

Give yourself 3 to 6 months to work with your training reports and the advice in this report, and make sure you really practise in that period — count on at least 6 to 10 rounds or 8 to 12 practice sessions where you work on it deliberately. Then take the MentalRoutine Assessment again. Where you truly changed something, you will see it as a clear shift in your profile — not in a single decimal, but in the direction a whole step moves.

"The greens are not going anywhere. The game will always be here for you. What you choose to do with what you've learned — that's entirely yours."

— MENTALROUTINE · WWW.MENTALROUTINE.COM
