READING GUIDE

This report — *how to read it*

1 **Start here: Mental Index & Archetype** (next page)
Your overall score and archetype — a 2 minute read, direct insight into your mental profile.

2 **Then go to Priorities + Action plan** (page 11–12)
Three concrete priorities and an action plan for before, during and after the round. Cut out the tear-off card — take it to the course (in your bag or to a partner).

3 **Use Part 2 as a reference or with your coach**
Per step a scene on the course you will recognise, your five components and concrete drills — then your four factors with their lenses. Ideal to share with a teaching professional or sport psychologist before a session.

The holes and moments we describe are recognisable example situations based on your answers — not rounds we watched, but a mirror of how you describe yourself on the course.

YOUR 8 STEPS — QUICK GUIDE

Focus	7.4/10
Concentration	6.9/10
Conviction	7.1/10
Trust ★ Strongest step	7.8/10
Evaluation	6.3/10
Acceptance ▼ Biggest opportunity	5.6/10
Analysis	6.0/10
Transfer	6.4/10

HOW DO YOU READ A SCORE?

7.0–10	**Strength** — build on this; use it as an anchor under pressure.
4.0–6.9	**Working area** — functional but inconsistent; focused attention pays off.
0–3.9	**Growth area** — most to be gained here; this step costs you energy now.

'Strongest step' and 'biggest opportunity' compare your steps with each other; strength, working area and growth area say where a score sits on the scale.

WHERE YOUR MENTAL INDEX (6.7) SITS

0–3.9 · Growth area Working area 7.0–10 · Strength

MENTAL INDEX & ARCHETYPE

MENTAL INDEX

The higher your Mental Index, the stronger you experience your own mental game

You can choose a playable route down a long hole and swing freely, yet still arrive at the next ball carrying the last miss.

YOUR ARCHETYPE

The Committer

Once you pull a club, you go all in. No half measures.

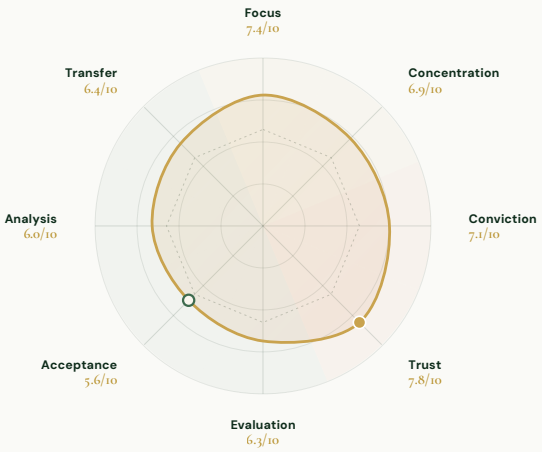

"Golf is a game that is played on a five-inch course — the distance between your ears."

— BOBBY JONES

YOUR THREE PHASES

Pre-Shot	Focus · Concentration	7.2/10
Swing	Conviction · Trust	7.4/10
Post-Shot	Evaluation · Acceptance · Analysis · Transfer	6.1/10

YOUR FOUR INFLUENCING FACTORS

Risk appetite	7.2/10
Pressure	6.8/10
Resilience	5.4/10
Readiness	5.0/10

Not steps, but the conditions that decide whether your routine holds. Covered in Part 2.

6.7
MENTAL INDEX

The further a point sits from the centre, the stronger that step. Your silhouette shows at a glance where your foundation lies — and where the most is to be gained.

INTRODUCTION

Welcome to *your report*

FOR YOU

When a poor shot follows a sensible decision, you can walk away wondering what more you were supposed to do. Sam, this report gives you somewhere useful to take that question. It draws on your answers, not an observed round, so the scenes are illustrations for you to recognise or question. Keep what feels true, and use the rest to look more closely at your next round.

WHAT YOUR SILHOUETTE SAYS

You can stand over a sensible lay-up and make a wholehearted swing without filling your head with instructions. Your preparation gives you a useful picture, and your execution is the most settled part of your game. After a disappointing result, your attention can stay with what should have happened instead of what the ball actually did. That makes the walk between shots the most useful place to bring more consistency into your golf.

Where the shape bulges outward lies your foundation. Where it caves in lies the most gain. Part 2 tells you per step what to do about it.

"If I commit to the shot and trust my routine, the result takes care of itself."

— ANNIKA SÖRENSTAM

ABOUT THIS REPORT

How does *the MentalRoutine work?*

THE MODEL AND THIS REPORT

The model is built on sport-psychology research — how you steer attention, handle tension and stay motivated — and tested on more than 1,000 golfers, from handicap 0 to 36+. The next page shows at a glance how it fits together: three phases, eight steps with five components each, and four influencing factors with four lenses each. The report has two parts. Part 1 is your portrait: what your scores say, where your strength lies and where you start. Part 2 is your reference: every step and then every factor worked out in full, with exercises.

HOW YOUR SCORES ARE BUILT

You answer a series of questions about your routine and the factors around it — 20 to 25 minutes in all. Per step we measure five components (forty in all) and per influencing factor four sub-factors (sixteen in all). Every score is a mark from 0 to 10, based on the maximum attainable score on that component — so you see at a glance where you are strong and where the most room lies. The Mental Index (0–10) sums your eight steps in one number.

Important: these scores measure how you experience your own game — not an outside, measured performance. Read a 10 as "the top of the scale", not as perfection. Because it reflects your own experience, the scores point you straight to where it chafes for you.

THIS REPORT IS UNIQUE TO YOUR PROFILE

The course scenes, comparisons and advice in this report are not generic — they are built from your own answers and handicap (24.0). It works for golfers at every level, from handicap 0 to 36+. There is no "right" or "wrong" mental profile. This report helps you understand yourself better; it is not a medical or psychological diagnosis. Struggling with severe tension or stress around your game? Speak to a sport psychologist.

THE MODEL

One routine. Eight steps. *Every shot.*

Not eight separate parts, but one routine you run in the same order on every shot — and the terrain that routine has to get through. The shot routine tells you when something happens (before, during or after the shot), the mental routine what you do at that moment, and the influencing factors what makes it easier or harder.

PRE-SHOT		SWING		POST-SHOT			
1	2	3	4	5	6	7	8
Focus	Concentration	Conviction	Trust	Evaluation	Acceptance	Analysis	Transfer
Risk appetite 7.2		**Pressure** 6.8		**Resilience** 5.4			
Interferes with your target and plan: the risk you accept before the shot.		Interferes with conviction and a free swing: under real pressure your game falls back on what is ingrained.		Interferes with processing after the shot — and decides whether a miss carries into the Focus of your next shot.			

↻ *Step 8, Transfer, hands the next shot its Focus — that is how the loop closes.*

READINESS — THE FOUNDATION 5.0

Your capacity to run any of this at all: built over time, plus your state today. Readiness is not one point in the loop, but the ground under every step.

HOW TO USE THE MODEL — FOUR QUESTIONS FOR EVERY SHOT

1 · When?
THE SHOT ROUTINE
Before, during or after the shot: three phases.

2 · Which step?
THE MENTAL ROUTINE
Eight steps, each with five trainable components — forty in all.

3 · What was in play?
THE INFLUENCING FACTORS
Four factors, each seen through four lenses: knowledge, context, dialogue and self — sixteen in all.

4 · What now?
ONE ACTION
One exercise, cue or reset for the next comparable shot. You find them per step and per factor in Part 2.

Together 56 measurement points: 40 in your routine, 16 in the factors around it. Every piece of advice in this report works on one of them.

THE SHOTROUTINE

Pre-Shot · Swing · *Post-Shot*

Behind the ball, you usually find a sensible shot and a picture you can use. Your Swing phase is your anchor: once the choice is made, you tend to let the club move. Post-Shot is the less settled stretch, especially when the result feels worse than the swing deserved.

PRE-SHOT
Preparation

7.2/10

FOCUS
CONCENTRATION

You picture a playable route and weigh the trouble before choosing your club, reflected in your Pre-Shot score of 7.2/10.

Influenced by: **Risk appetite** 7.2/10

SWING
Execution

7.4/10

CONVICTION
TRUST

You tend to carry your chosen shot through with a free swing, reflected in your Swing score of 7.4/10.

Influenced by: **Pressure** 6.8/10

POST-SHOT
Processing

6.1/10

EVALUATION
ACCEPTANCE
ANALYSIS
TRANSFER

You sometimes keep discussing the miss with yourself after the club is back in the bag, reflected in your Post-Shot score of 6.1/10.

Influenced by: **Resilience** 5.4/10

Readiness 5.0/10 — the foundation under all three phases

ENERGY LEAK

Between Swing and Post-Shot, you can move from a free finish to a tight jaw as the ball settles somewhere disappointing. Between Post-Shot and the next Pre-Shot, you are still replaying that finish while trying to choose a new club.

PART 1 · THE BIG PICTURE

The Weight Behind a Wholehearted Shot

You make a free swing with a hybrid, catch it cleanly, and watch a sideways bounce kick your ball into the rough. Sam, your Trust at 7.8/10 is a strength: you choose your shot and commit to it. Your Acceptance at 5.6/10 points to an opportunity after the shot, when an unlucky result can hold your attention. You can start small: acknowledge that you made a good swing, then pick a target for your recovery.

> *You can let go of the result and keep trusting your swing.*

STRONGEST STEP

Trust

7.8/10

Build on your Trust by making one relaxed rehearsal swing, then stepping in and committing to your target. On the practice green, you can bring that same freedom to a short putt: choose your line and let the stroke flow.

BIGGEST OPPORTUNITY

Acceptance

5.6/10

"You commit to the shot, then let the result go."

Sam, use this on the 12th after the short bogey putt misses, before you bend to mark the ball.

YOUR NEXT STEPS

Three routes *forward*

ROUTE 01

More *enjoyment* in the game

You miss a short putt, then notice the conversation carrying on without you as you replay it. This route helps you return to the people and the hole in front of you sooner. A good chip also gets its proper moment before you hurry towards the next task.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · CONCENTRATION · TRANSFER

You can walk a fairway without enjoying much of it when the last shot still fills your head. These three steps help you release it, settle between shots, and take one useful memory home.

ROUTE 02

Better *performance*

You have a long par four in front of you and enough club to reach trouble, but not reliably the green. This route makes the three-shot plan feel like purposeful golf rather than a compromise. After each attempt, you gather a clear fact and use it without rebuilding your swing on the course.

GIVE THESE STEPS PRIORITY

EVALUATION · ANALYSIS · FOCUS

You learn little from calling a shot poor when it actually followed the chosen line and finished short. These steps help you separate the choice, the strike, and the result before selecting your next landing area.

ROUTE 03

Enjoyment & performance

You reach your ball after a disappointing approach and want both a sensible recovery and a quieter head. This route gives you room to acknowledge the frustration before returning to the actual lie. You leave the round with something worth practising, rather than a long list of complaints.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · EVALUATION · TRANSFER

You already have a swing you are willing to use, so improvement need not mean adding more instructions over the ball. These steps make the aftermath clearer and help you carry one useful lesson to your next practice.

PRIORITIES

Where to begin — *your focus*

LEVERAGE YOUR STRENGTHS

TRUST | FOCUS | CONVICTION

Use Trust by rehearsing the smooth finish you already recognise, then stepping in with that same freedom. Extend Focus to awkward recoveries by choosing a generous landing area where your next shot will be straightforward. Bring Conviction to the safe option by selecting the club, taking your stance, and giving that modest shot your full attention.

HANDLING YOUR OPPORTUNITIES WELL

EVALUATION | ANALYSIS | ACCEPTANCE

Start with Acceptance by loosening your fingers after a miss and breathing out before walking on. Add Evaluation once that feels familiar: watch the ball finish and name its direction and distance. Introduce Analysis after that, using one check of your preparation before deciding whether anything technical needs attention.

YOUR TOP 3 PRIORITIES NOW

1. Start with Acceptance at 5.6/10: soften your grip after a miss so disappointment need not accompany your next club choice.
2. Build Evaluation by watching the finish before judging your wholehearted attempt, then noting one plain fact on your card.
3. Develop Analysis by checking whether you were ready before blaming your improving technique, then writing down one cause to investigate.

YOUR 4 WEEKS — STEP BY STEP

WEEK 1

Lower your shoulders after each miss before you walk on.

WEEK 2

Keep your release habit; add one spoken fact about the ball's finish.

WEEK 3

Keep both habits; add one check of your preparation before blaming technique.

WEEK 4

Link your release, factual description, and preparation check before putting the club away.

GETTING TO WORK

Your personal *action plan*

MEASURE IT ON THE COURSE — THIS ROUND

- ☐ Count misses after which you lower your shoulders before taking your first step.
- ☐ Tally shots you describe by direction and distance before calling them good or bad.
- ☐ Count misses after which you check your preparation before naming a technical cause.

TEST THIS REPORT'S CORE YOURSELF

☐ Tally misses across three rounds: clean strike with bad luck or expected mishit, and whether you release each within ten seconds. If the first kind lingers more, this picture fits you; if rates match, revise it.

Before

THE ROUND

- Rehearse opening your fingers and breathing out beside your bag, ready for the first disappointing shot.
- Mark three small tally spaces on your card for releasing, observing, and checking your preparation.
- Choose a familiar club for the opening hole and make one comfortable practice swing towards a generous target.

During

ON THE COURSE

- Loosen your glove after a miss, breathe out slowly, and walk towards the actual ball.
- Keep your eyes on the landing area until the ball stops, then describe the finish in a few words.
- Check whether you had a clear target and felt ready before writing down a suspected swing fault.

After

REFLECTION

- Count the occasions when you completed your release habit, including after shots that felt unfair.
- Circle one factual description that helped you choose a sensible recovery.
- Write one question about a recurring miss to take to your next lesson.

TAKE THIS TO THE COURSE · PUT IT IN YOUR BAG

PRE-SHOT CUE	Pick your landing patch, rehearse once, then step in.
RESET LINE	Let your fingers soften; breathe towards the fairway.

YOUR PROMISE SHEET

Sam

Sam, when an ordinary shot goes wrong, you want to know what to do with it, not be told to care less. From your answers, you come across as someone willing to choose a shot and give it an honest attempt. You deserve room to enjoy a neatly played recovery even when the hole has not gone to plan. You are a wholehearted golfer learning to make room for an imperfect round.

YOUR MAIN MANTRA — THE LINE FOR THIS ROUND

> *"You give your all, then let go."*

SIGNATURE

DATE

MentalRoutine Assessment · Sam · November 3, 2026

"The mind messes up more shots than the body."

— TOMMY BOLT

DEEP DIVE

Questions to *think about*

Write your first thoughts below. There are no right or wrong answers — only honest ones. You need not answer them straight away — feel free to come back later.

ON YOUR STRONGEST STEP — TRUST

Which shot lets you swing most freely, and what could you borrow from it for a short putt?

ON YOUR BIGGEST OPPORTUNITY — ACCEPTANCE

What are you still asking a disappointing shot to explain when you reach your next ball?

OVERALL — YOUR COMPLETE PROFILE

What would change in your round if you judged your response as carefully as you judge your strike?

YOUR INTENTION FOR THE NEXT ROUND

Which single mental habit will you build in over the next four weeks? Describe when, how and what for.

PART 2 OF THE REPORT

Your Complete *Profile*

Per step and per factor — worked out in full

In this part each of your eight steps is worked out in full: a scene on the course you will recognise, your score, the five components read personally, concrete advice, two exercises and a mantra. Then come your four influencing factors, each with the four lenses. Use Part 2 as a reference — or share it with your coach.

THE EIGHT STEPS

1. Focus	7.4	**17**
2. Concentration	6.9	**19**
3. Conviction	7.1	**21**
4. Trust	7.8	**23**
5. Evaluation	6.3	**25**
6. Acceptance	5.6	**27**
7. Analysis	6.0	**29**
8. Transfer	6.4	**31**

THE FOUR FACTORS

Risk appetite	7.2	**34**
Pressure	6.8	**36**
Resilience	5.4	**38**
Readiness	5.0	**40**

FOR YOUR COACH — IN 90 SECONDS

BIGGEST GAIN	Your biggest opportunity is a repeatable physical release after misses, followed by a factual description before any swing correction.
CORE DIAGNOSIS	You report strong execution but unsettled recovery; test whether cleanly struck, disappointing shots linger longer, then observe your response before introducing technical changes.
START QUESTION	*"What feels hardest to leave behind after a shot you struck as intended?"*

Every step has its own story.
This one is yours.

STEP 1 OF 8 · PRE

Focus

Influenced by: Risk appetite 7.2/10 · Readiness — the foundation

7.4/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"You see a playable route where a long hole could feel overwhelming."

> *On the 2nd, a long par four, you face 170 yards into a light breeze. You picture a low seven-iron stopping short of the greenside bunker: 'Leave a simple pitch.' You swing towards that patch and give yourself exactly that.*

DEFINITION

You pick the target area, settle your club choice and see the ball flight before you swing. This includes course management: how do you play the hole strategically, in a way that suits your own game? Focus must be fully finished before you move on to concentration.

With trouble near a distant green, you can picture a sensible stopping place. Your 7.4/10 reflects a strength in building a playable shot before you address the ball.

BLIND SPOT?

A score this high is a strength — but check it once with your pro: does your focus feel as strong on the course as it scores on paper?

ON THE CARD · YOU MAKE LONG HOLES FEEL MORE MANAGEABLE BY CHOOSING A USEFUL PLACE TO PLAY FROM NEXT.

You give your club choice a clear purpose before stepping over the ball.

IF YOU DO JUST ONE THING **Choose a landing patch that leaves you a straightforward next shot.**

Choosing a patch short of a bunker gives you a clearer task than simply hoping to avoid sand.

THE FIVE COMPONENTS OF FOCUS

Pick a target · START HERE — WORKING AREA

With Pick a target, you sometimes settle for 'fairway' rather than one clear patch.

See the shot — STRENGTH

See the shot helps you picture a seven-iron landing safely short of the bunker.

Judge it honestly — STRENGTH

You use Judge it honestly to choose a club suited to today's carry.

Weigh the risk — STRENGTH

Through Weigh the risk, you recognise when a lay-up leaves the simpler pitch.

Commit to it — STRENGTH

Commit to it shows when you address the ball with your landing patch already chosen.

You picture the flight, judge the carry, and weigh the trouble; sharpening the final landing patch gives your decision an even clearer destination.

PRIMARY ADVICE

Extend your clear shot picture to recovery play by finding the widest useful patch of fairway before choosing a club.

Extra tip: *Use your eye for risk on long par fours by choosing where you want your third shot to begin.*

MENTAL DRILL 1

Choose a generous landing patch before each approach on your final three holes. Complete three choices. Succeed by naming all three before selecting clubs. Then repeat with a playing partner watching.

MENTAL DRILL 2

Picture the seven-iron landing patch, then transfer that clarity to six practice chips. Succeed by naming a specific landing spot before all six. Then choose three different lies.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You pick the patch, not the flag."

STEP 2 OF 8 · PRE

Concentration

Influenced by: Risk appetite 7.2/10 · Readiness — the foundation

6.9/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You can shut out distractions, though your attention sometimes wanders at the last moment."

> *On the 4th, you have a 30-yard pitch from a dry, closely mown lie. A trolley rattles behind you, and your eyes leave the landing spot: 'Get on with it.' You hurry back to the ball and catch the pitch thin.*

DEFINITION

You put all your attention on that one task — the ball to the target area — and shut out everything that is irrelevant right now: the last shot, the state of the match, outside noise and inner doubt.

You can put outside noise aside and start again. At 6.9/10, staying with the shot through the final moments is less consistent than making that initial reset.

ON THE CARD · YOU ARE LESS LIKELY TO RUSH A SIMPLE SHOT WHEN YOU GIVE INTERRUPTED PREPARATION A FRESH START.

You prepare more calmly when your attention stays with the ball after your final look.

02

IF YOU DO JUST ONE THING **Step away when distracted, then rebuild your stance before playing.**

You can choose the right landing spot yet lose the shot by listening to a conversation during the setup.

THE FIVE COMPONENTS OF CONCENTRATION

Stay with it · START HERE — WORKING AREA

Stay with it varies when waiting players make you hurry a straightforward pitch.

Park distractions — STRENGTH

With Park distractions, you can set nearby conversation aside before choosing your club.

Eye on ball — WORKING AREA

You sometimes lose Eye on ball when a sound draws your gaze during setup.

Reset — STRENGTH

Reset helps you step back and rebuild your stance after an interruption.

Relax between shots — STRENGTH

Through Relax between shots, you give yourself breathing room on the walk.

You relax between shots and park distractions well; after a reset, keeping your eyes settled helps your attention last until the club moves.

PRIMARY ADVICE

Step out of your stance if a sound pulls your eyes away, then take your final look again.

Extra tip: *Keep conversation for the walk, then let it end naturally before you begin choosing your shot.*

MENTAL DRILL 1

Rebuild your stance whenever your eyes leave a practice pitch unexpectedly. Play six balls. Succeed by restarting every interrupted setup rather than hurrying. Then use the same response over three holes.

MENTAL DRILL 2

Hold your attention on one dimple through the final breath before putting. Make eight practice strokes. Succeed with six uninterrupted setups. Then repeat while a partner talks several yards away.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You refocus on this ball."

STEP 3 OF 8 · SWING

Conviction

Influenced by: Pressure 6.8/10 · Readiness — the foundation

7.1/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"You can give a modest recovery the same conviction as a full shot."

> *On the 6th, your drive finishes beneath low branches, leaving 80 yards to open fairway. You take a seven-iron and think, 'Low and out is enough.' Your hands settle, and you punch it clear rather than attempting the green.*

DEFINITION

You are convinced you will hit the shot exactly as intended. You want it, you can do it, you do it. Doubt is useless and has to be switched off completely, because without conviction there is no good performance.

Once you choose the sensible escape, you can play it positively. Your 7.1/10 reflects conviction in acting on a decision, even when the shot is modest.

BLIND SPOT?

A score this high is a strength — but check it once with your pro: does your conviction feel as strong on the course as it scores on paper?

ON THE CARD · YOU CAN PLAY A SENSIBLE ESCAPE WITH PURPOSE RATHER THAN TREATING IT AS A RELUCTANT SURRENDER.

You give the chosen recovery a proper chance rather than making a hesitant attempt.

IF YOU DO JUST ONE THING **Give your safe recovery a definite target and make a positive stroke.**

You show conviction by playing your chosen punch shot positively instead of wishing for a different club halfway through.

THE FIVE COMPONENTS OF CONVICTION

Believe in it · START HERE — WORKING AREA

Believe in it fluctuates when your chosen club must carry an awkward stretch of rough.

Fully commit — STRENGTH

With Fully commit, you give a safe punch shot a positive, complete action.

Fire yourself up — WORKING AREA

You use Fire yourself up inconsistently when a slow round leaves you feeling flat.

Take it on — STRENGTH

Take it on helps you play a necessary recovery instead of backing away.

Back yourself — STRENGTH

Through Back yourself, you support your chosen club once the decision is made.

You can act decisively before certainty feels complete; choosing a manageable recovery gives your belief and readiness something solid to support.

PRIMARY ADVICE

Give the safe option a positive description, such as 'through that gap', then set the clubface towards it.

Extra tip: *Bring your recovery-shot decisiveness to a short putt by choosing the starting line before taking your stance.*

MENTAL DRILL 1

Play the sensible recovery on three holes with a partner watching. Name the target before addressing each ball. Succeed by making all three without reopening club choice. Then repeat during a club competition.

MENTAL DRILL 2

Transfer your positive seven-iron recovery decision to six short practice putts. Choose each line before stepping in. Succeed with six uninterrupted decisions. Then repeat from a slightly longer distance.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You back your chosen shot."

STEP 4 OF 8 · SWING

Trust

Influenced by: Pressure 6.8/10 · Readiness — the foundation

7.8/10

STRENGTH ★ Strongest step

A STRONG SIDE OF YOUR GAME

"You give the club room to work once your choice is made."

> *On the 8th, you face a 105-yard approach with the same light breeze across you. You picture the middle of the green and feel your fingers stay soft: 'Let the club go.' You swing without adjusting halfway through, and the ball reaches the putting surface.*

DEFINITION

You hit the shot with full commitment: no hesitation, nothing held back. This is 'stand there and do it'. The prep is done; now the loyal execution, with the right balance of power and calm.

Over a manageable approach, you can let the club move without a running technical commentary. Your 7.8/10 makes Trust a clear strength and your strongest step.

BLIND SPOT?

A score this high is a strength — but check it once with your pro: does your trust feel as strong on the course as it scores on paper?

04

ON THE CARD · YOU GIVE YOUR DEVELOPING TECHNIQUE ROOM TO WORK INSTEAD OF CROWDING IT WITH LAST-SECOND CORRECTIONS.

You allow your chosen swing to happen without trying to repair it halfway through.

IF YOU DO JUST ONE THING **Carry your comfortable practice-swing finish straight into the shot.**

You show trust by letting the club follow the planned swing rather than steering it away from trouble.

THE FIVE COMPONENTS OF TRUST

Don't steer RELATIVE WEAKEST

Don't steer shows when you let an approach travel without trying to guide the club.

No swing thoughts STRENGTH

With No swing thoughts, you play familiar irons without running through technical instructions.

Hit your plan STRENGTH

You use Hit your plan to carry the chosen flight into the actual swing.

Stay loose STRENGTH

Stay loose lets your fingers remain soft as you begin a manageable approach.

Practise on purpose STRENGTH

Through Practise on purpose, you take a clear shot intention to the range.

You practise with purpose, carry a clear plan to the ball, and stay loose enough to let it happen without steering or technical chatter.

PRIMARY ADVICE

Use your familiar loose finish on the closing holes by rehearsing it once before stepping in.

Extra tip: *Transfer your freedom to putting by rehearsing the pace beside the ball, then repeating that unforced stroke.*

MENTAL DRILL 1

Keep your fingers as soft as on the approach during three closing-hole shots with a partner watching. Succeed with three swings free of deliberate steering. Then repeat in a club event.

MENTAL DRILL 2

Carry your free approach rhythm into eight short practice putts. Rehearse the pace once before each. Succeed with six strokes made without a mid-stroke correction. Then repeat on a gentle slope.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You let the club do its job."

STEP 5 OF 8 · POST

Evaluation

Influenced by: Resilience 5.4/10 · Readiness — the foundation

6.3/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You notice a disappointing result before you have collected all the useful details."

> *On the 10th, your 20-foot putt rolls past the hole and stops four feet beyond. You straighten before it stops: 'Too hard again.' Your jaw tightens, and you prepare the return without noticing how much the first putt broke.*

DEFINITION

You note objectively what the ball did — strike feel, sound, direction, ball flight, distance, where it finished, divot — and match it against your Focus plan. This sets up the Analysis.

You can identify the broad miss but sometimes stop watching too soon. At 6.3/10, Evaluation works best when you let the ball finish before deciding what happened.

ON THE CARD · YOU UNDERSTAND MORE OF THE ROUND WHEN YOU DESCRIBE THE FINISH BEFORE ATTACHING A VERDICT.

You carry fewer vague complaints when the ball's actual finish replaces an immediate verdict.

05

IF YOU DO JUST ONE THING **Watch the ball stop before you describe its direction and distance.**

Evaluation separates your 'terrible putt' from the useful observation that it finished four feet long and right.

THE FIVE COMPONENTS OF EVALUATION

Watch closely · START HERE — WORKING AREA

Watch closely varies when you straighten before a disappointing putt has stopped.

Judge the miss — WORKING AREA

With Judge the miss, you estimate the gap but sometimes exaggerate after frustration.

Stay level-headed — WORKING AREA

You find Stay level-headed less reliable when a reasonable approach finishes in trouble.

Check your plan — WORKING AREA

Check your plan happens inconsistently when you call a sensible lay-up a poor shot.

Fixed order — WORKING AREA

Through Fixed order, you sometimes check direction before distance, but the sequence still varies.

When you stop watching early, you judge the miss from an incomplete picture, making a calm comparison with your original plan harder to repeat.

PRIMARY ADVICE

Rest the putter head on the ground, breathe out slowly, and watch the ball stop before describing its finish.

Extra tip: *Name direction and distance before judging quality, using plain descriptions such as 'right edge, four feet beyond'.*

MENTAL DRILL 1

Keep watching each practice putt until it stops, especially after you straighten early. Roll six balls. Succeed by describing all six finishes accurately. Then repeat during three holes.

MENTAL DRILL 2

Compare your planned landing patch with the actual finish after six range shots. Succeed by recording direction and distance for five. Then repeat with a different club.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You watch where it finishes."

STEP 6 OF 8 · POST

Acceptance

Influenced by: Resilience 5.4/10 · Readiness — the foundation

5.6/10

WORKING AREA

▼ Biggest opportunity

SOLID — WITH ROOM TO SHARPEN FURTHER

"You want to move on, but disappointing shots can keep asking for your attention."

> *On the 12th, a five-foot bogey putt slips past, and you squeeze the putter grip. You bend towards the ball thinking, 'That should have dropped.' You rush the next stroke before your breathing settles, then walk away still arguing with the first putt.*

DEFINITION

You accept the outcome of your shot, good or bad. It happened; you cannot change it any more. Emotions are allowed, but they have to be dealt with before you move to the next shot.

After a short miss, you can keep playing while still debating what happened. At 5.6/10, Acceptance is a working area and your biggest opportunity for a calmer round.

ON THE CARD · YOU CAN FINISH A HOLE STILL ARGUING WITH A PUTT INSTEAD OF NOTICING THE NEXT FAIRWAY.

You enjoy less of the walk when the last result keeps occupying your thoughts.

06

IF YOU DO JUST ONE THING **Open your fingers after a miss before you start walking.**

You accept a missed putt when the disappointment can pass without being carried into the next stroke.

THE FIVE COMPONENTS OF ACCEPTANCE

Let go · START HERE — WORKING AREA

Let go remains inconsistent when you replay a missed short putt while leaving the green.

Be kind — WORKING AREA

With Be kind, you sometimes answer a mishit with criticism rather than a fair description.

Keep perspective — WORKING AREA

You find Keep perspective harder when one awkward hole colours the next few minutes.

Play on — WORKING AREA

Play on varies when you reach the next ball still debating the previous result.

Enjoy good shots — WORKING AREA

Through Enjoy good shots, you sometimes pause, but often hurry past a well-played chip.

When you keep replaying the miss, your self-talk sharpens and perspective narrows, making it harder to play on or give a good recovery its moment.

PRIMARY ADVICE

Uncurl your fingers from the grip, breathe out longer than you breathe in, then turn towards the ball.

Extra tip: *Give a well-played chip two seconds of attention by watching its finish before reaching for your putter.*

MENTAL DRILL 1

Loosen your glove and breathe out after each disappointing range shot. Use six balls. Succeed by completing the action before your next setup every time. Then use it after three on-course misses.

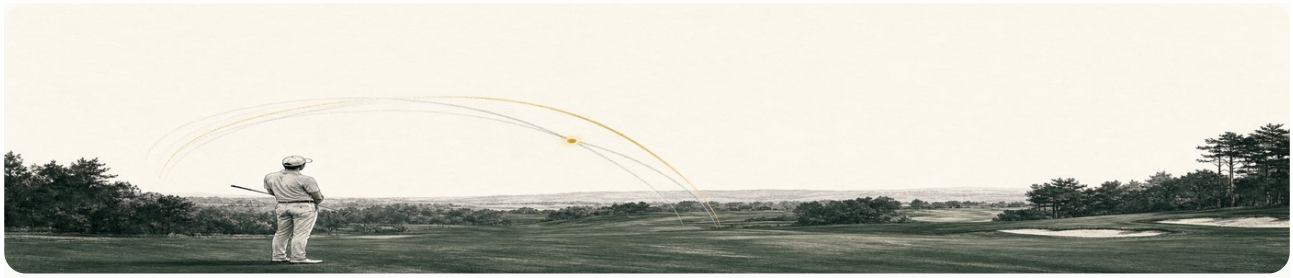

MENTAL DRILL 2

Practise short putts and notice any squeeze after a miss. Roll eight balls. Succeed by easing your fingers before the next setup every time. Then repeat with a partner watching.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You can be upset without gripping harder."

STEP 7 OF 8 · POST

Analysis

Influenced by: Resilience 5.4/10 · Readiness — the foundation

6.0/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You want an explanation, and a swing fault can arrive before the evidence."

> *On the 15th, your seven-iron finishes short from 130 yards into the breeze. You frown: 'Must have lifted up.' You rehearse a corrected swing before checking whether the club was enough, and reach the ball with another instruction in your head.*

DEFINITION

You compare the shot you hit with the shot you had in mind during Focus. You look for the main cause of any difference — mental as well as technical — and draw one clear conclusion.

You want to understand a miss, but can reach for a technical explanation too quickly. Your 6.0/10 reflects useful intent that needs a more consistent order of checks.

ON THE CARD · YOU PRACTISE MORE PURPOSEFULLY WHEN YOU INVESTIGATE ONE SUPPORTED CAUSE INSTEAD OF COLLECTING CORRECTIONS DURING THE ROUND.

You give yourself more to think about when every miss becomes a new swing instruction.

07

IF YOU DO JUST ONE THING **Check your target and readiness before choosing one cause to investigate.**

Analysis asks whether a short approach came from insufficient club, an interrupted setup, or poor contact before choosing one cause.

THE FIVE COMPONENTS OF ANALYSIS

Mental or technical? · START HERE — WORKING AREA

Mental or technical? stays unsettled when you blame your swing before checking your preparation.

One cause — WORKING AREA

With One cause, you sometimes settle on one explanation, then add another after rehearsing.

Spot the pattern — WORKING AREA

You use Spot the pattern inconsistently when repeated short approaches feel like separate accidents.

Diagnose honestly — WORKING AREA

Diagnose honestly varies when a poor club choice is easier to call a poor swing.

Ask for help — WORKING AREA

Through Ask for help, you sometimes bring a clear question, but often bring several complaints.

If you label the miss technical too soon, you collect corrections instead of one cause, and the repeated pattern becomes harder to explain to your pro.

PRIMARY ADVICE

Rest your club across your forearms, breathe out slowly, then check whether your target and club choice matched the shot.

Extra tip: *Write one suspected cause beside a repeated miss, and take that single question to your pro rather than changing three things.*

MENTAL DRILL 1

Check club choice before rehearsing a correction after a short iron. Hit six range balls. Succeed by making that check after every short finish. Then repeat into a breeze.

MENTAL DRILL 2

Check target clarity and readiness after each of three on-course misses. Succeed by naming one supported cause or saying 'not clear' each time. Then repeat over six holes.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You check before changing your swing."

STEP 8 OF 8 · POST

Transfer

Influenced by: Resilience 5.4/10 · Readiness — the foundation

6.4/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You spot useful lessons, though some disappear before the next practice session."

> *On the 17th, you leave a 25-yard chip short from the dry fringe. You think, 'Same thing again,' recalling the hurried pitch earlier. You make a useful rehearsal, then put the wedge away without choosing what to practise next time.*

DEFINITION

You give meaning to what the Analysis showed and carry it forward — you store it as an insight for after the round. That way you get to know your strengths and weaknesses over time and know exactly what to work on.

You can look back and find a useful adjustment, but do not always carry it forward. At 6.4/10, Transfer needs a small, repeatable way to preserve one lesson.

ON THE CARD · YOU GIVE THE NEXT PRACTICE A PURPOSE WHEN YOU PRESERVE ONE CLEAR LESSON FROM THE ROUND.

You leave more satisfied when one useful lesson survives beyond the car park.

08

IF YOU DO JUST ONE THING **Write one specific shot to practise before leaving the course.**

Transfer happens when you turn a short chip into a clear landing-distance task at the next practice session.

THE FIVE COMPONENTS OF TRANSFER

Misses teach you · START HERE — WORKING AREA

Misses teach you varies when 'short again' remains a complaint rather than a practice target.

Look back — WORKING AREA

With Look back, you review the round, though the useful detail sometimes fades.

Turn miss to aim — WORKING AREA

You use Turn miss to aim inconsistently when a short chip suggests no specific landing-distance task.

Find the fix — WORKING AREA

Find the fix sometimes produces a useful rehearsal that you do not revisit.

Keep one lesson — WORKING AREA

Through Keep one lesson, you occasionally save a note, but often leave with several thoughts.

You can recognise the repeated miss and rehearse an answer; without one written task, that answer rarely gets a fair test at your next practice.

PRIMARY ADVICE

Place your wedge beside the bag, breathe out slowly, and write the one chip distance you want to rehearse next time.

Extra tip: *Read your last practice note before warming up, then play three balls that recreate the same shot.*

MENTAL DRILL 1

Write one practice task after the round instead of stopping at 'same thing again'. Use three rounds. Succeed by bringing each note to your next practice. Then include one successful shot.

MENTAL DRILL 2

Recreate the short chip with six practice balls and record your landing distance. Succeed by writing one usable task before leaving. Then use that task at your next warm-up.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"You take one lesson home."

PART 2 · CONTINUED

The four influencing factors

You have now seen your eight steps — the mental routine itself. But how well that routine holds up depends on four factors around it, in shot order: how you weigh **risk** before the shot, how **pressure** loads your swing, how quickly you **bounce back** after the shot, and how **ready** you are — the game you have available today.

They are not steps, but the conditions that decide whether the routine holds when it gets tense. We look at each factor through the same four lenses: Knowledge (what do you know?), Context (what is true here?), Dialogue (say the shot) and Self (are you ready to hit it?). Four factors times four lenses: sixteen sub-factors.

INFLUENCING FACTOR 1 OF 4

Risk appetite

Pre-shot: club, target, line and miss

7.2/10

STRENGTH

A STRENGTH THAT HOLDS YOUR ROUTINE UP UNDER PRESSURE

> *You face a pond short of the green, with room to the right. You can see the sensible route, but the important detail is whether your usual carry supports the club you choose.*

WHAT THIS FACTOR IS

Risk appetite sets the shot before commitment begins: which club, which target, which line and which miss you accept. It is neither courage nor caution. With a poor risk call the atmosphere decides — mood, ego or another player — and the numbers are guessed or ignored. With a good risk call the facts decide: a known carry, a clear target and an acceptable miss, and then full commitment. Judge the decision separately from the result.

Knowledge sets odds · context sets exposure · dialogue states reasons · self carries consequences

Your Risk appetite score of 7.2 is a strength: you can choose a shot and accept its uncertainty. At your 24.0 handicap, that gives you something valuable to build on. Sharper knowledge of your usual distances and misses will help you use that willingness more deliberately.

HOW THIS HITS YOUR ROUTINE

Primarily in the pre-shot, in Focus and Concentration: club, target, line and miss. A good pre-shot produces a target that is specific, reachable and in line with your form. Skewed by risk appetite, the choice turns too aggressive or too cautious — and that happens before the swing, not inside it. In the swing it asks for commitment to the chosen shot; after the shot, for reviewing the decision, not the score.

> *You give your scorecard more consistency when your choices match your usual shot pattern.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a playing partner measure a carry, name the expected distance, then compare where the ball actually lands.

IF YOU DO JUST ONE THING **Build your choices around the carry and spread you repeatedly produce.**

THE FOUR SUB-FACTORS OF RISK APPETITE

KNOWLEDGE **Calibration** · START HERE — WORKING AREA

Your Calibration at 6.3 needs firmer evidence of your usual carry and sideways spread.

CONTEXT **Exposure** — STRENGTH

Your Exposure at 7.5 is a strength in recognising the opportunity and trouble each situation presents.

DIALOGUE **Rationale** — WORKING AREA

Your Rationale at 6.9 needs clearer links between your evidence, club, target and line.

SELF **Tolerance** — STRENGTH

Your Tolerance at 8.1 is a strength: you can genuinely accept uncertainty in your chosen shot.

PRIMARY ADVICE

Base carries over trouble on your ordinary strike, because your best shot is not the one you can count on.

Extra tip: *When choosing a club, explain how its usual carry and landing area support your target.*

DRILL 1 · ON THE COURSE

On the range, hit eight balls with your usual approach club. Record the carry spread and sideways misses, then choose a landing area that accommodates that pattern.

DRILL 2 · AT HOME

At home, sketch a familiar approach and add your recorded carry range. Choose a club and target, then write one sentence explaining the choice.

OBSERVATION POINT · CALIBRATION — *"Play your percentage."*

Watch for: Chooses from memory or best-case ability; no reference to stock dispersion or actual percentages.
Ask: What percentage shot is this for you? **Probe:** What evidence from practice or recent rounds supports that?

KEY LINE FOR THIS FACTOR

"You already accept uncertainty; give that strength the clearest possible numbers."

INFLUENCING FACTOR 2 OF 4

Pressure

Swing: tension, tempo and freedom

6.8/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *You reach the last tee with a score you would like to bring home. The fairway looks familiar, but you might notice your grip tightening and your swing becoming more careful.*

WHAT THIS FACTOR IS

Pressure makes the shot feel bigger than it is. It loads the routine — especially attention, tension and commitment — and is felt most in the swing: rushing, steering, a tighter grip, a shorter breath. Pressure can come from outside (a match, the cut, the final hole) or be added by yourself (the score, fear of the miss, wanting to prove something). The routine stays the same; only the load increases.

Knowledge locates the limit · context supplies load · dialogue frames meaning · self registers activation

Your Pressure score of 6.8 is a working area, close to becoming a strength. You recognise familiar triggers and can keep your inner message helpful. The next step is separating what the situation actually demands from the extra importance you give it, while keeping your swing playable.

HOW THIS HITS YOUR ROUTINE

Primarily in the swing: grip, breath, tempo and freedom. Conviction loses its ease and Trust is the most pressure-sensitive step of all — the urge to steer IS a pressure response. Pressure can already build in the pre-shot (outcome thinking, bodily tension); after the shot it asks you to keep the result in proportion.

> *You give yourself a steadier chance to finish holes when important swings remain playable.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch your playing partner check the lie, wind and match score before an important shot, and notice which facts receive attention.

IF YOU DO JUST ONE THING Match your response to what the shot actually asks of you.

THE FOUR SUB-FACTORS OF PRESSURE

KNOWLEDGE **Threshold** — STRENGTH

Your Threshold at 7.7 is a strength: you recognise where pressure has previously changed your execution.

CONTEXT **Demand** · START HERE — WORKING AREA

Your Demand at 5.9 needs a clearer reading of the moment's actual difficulty and consequences.

DIALOGUE **Narrative** — STRENGTH

Your Narrative at 7.1 is a strength: you can give important shots a proportionate meaning.

SELF **Arousal** — WORKING AREA

Your Arousal at 6.5 needs attention to the tension and energy that keep your swing playable.

PRIMARY ADVICE

When a hole feels important, identify its actual demands: distance, conditions, time and what the format requires.

Extra tip: *Practise occasional watched shots with a friend, so you can recognise the level of tension that still lets you swing freely.*

DRILL 1 · ON THE COURSE

On the range, alternate three unwatched shots with three watched by a friend. Compare your grip tension and tempo, looking for a level where you can still swing freely.

DRILL 2 · AT HOME

At home, compare two imagined final holes with identical yardages but different formats. Write what each situation actually requires, keeping the facts separate from your predictions.

OBSERVATION POINT · DEMAND — *"Read the stakes."*

Watch for: Treats every shot as equally important — or inflates the real score, format or consequence.

Ask: What does this shot actually require? **Probe:** Which consequence is real, and which is added?

KEY LINE FOR THIS FACTOR

"You can care about the result and still give the swing room."

INFLUENCING FACTOR 3 OF 4

Resilience

Post-shot: recover, reset and learn

5·4/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *You catch an approach heavy and leave yourself short of the green. As you walk forward, you may still be replaying the strike when the next lie needs your attention.*

WHAT THIS FACTOR IS

Resilience gets you to the next shot. It ends the carryover from the last shot and frees your attention for the next routine. As long as the previous shot is still playing — in your emotion, your tempo or your decisions — the reset is not finished. The reset is complete when you are available again for the shot in front of you.

Knowledge tracks the pattern · context selects the response · dialogue turns attention · self regains state

Your Resilience score of 5.4 is a working area: a disappointing shot can still travel with you. That is familiar territory while you develop your game. Your clearest opportunity is giving yourself simple words that turn attention towards what you can play next.

HOW THIS HITS YOUR ROUTINE

Primarily in the post-shot: Evaluation keeps emotion calibrated, Acceptance closes the shot, Analysis turns it into information and Transfer carries one lesson forward. But carryover can also enter the next plan and disturb the next swing.

> *You make steadier scoring decisions when one disappointing shot stops shaping the next.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Listen after your playing partner misses a green: notice the exact words used when attention turns towards the next shot.

IF YOU DO JUST ONE THING Give your attention somewhere useful to go after a miss.

THE FOUR SUB-FACTORS OF RESILIENCE

KNOWLEDGE **Trajectory** — WORKING AREA

Your Trajectory at 6.3 needs clearer knowledge of how setbacks typically unfold across your round.

CONTEXT **Agility** — WORKING AREA

Your Agility at 5.7 needs more flexibility in matching your recovery response to the next situation.

DIALOGUE **Reorientation** · START HERE — WORKING AREA

Your Reorientation at 4.5 needs simpler words that close the previous shot and name your next task.

SELF **Elasticity** — WORKING AREA

Your Elasticity at 5.1 needs room for your body, emotion and attention to regain playability.

PRIMARY ADVICE

Give yourself a plain next-task sentence, such as 'You have room to chip towards the middle.'

Extra tip: *Let the next lie set the size of your response; you do not need to recover everything at once.*

DRILL 1 · ON THE COURSE

Around the practice green, alternate straightforward chips with awkward lies. After each awkward attempt, play a straightforward chip and notice whether you bring extra force into it.

DRILL 2 · AT HOME

At home, picture three familiar misses and say one next-task sentence for each. Keep your words about the playable shot ahead, rather than the strike behind you.

OBSERVATION POINT · REORIENTATION — *"Name the next task."*

Watch for: Keeps talking about the previous shot or cannot formulate one clear next task.
Ask: What matters now? **Probe:** Can you say the next job in one sentence?

KEY LINE FOR THIS FACTOR

"You do not need to like the last shot to be available for the next."

INFLUENCING FACTOR 4 OF 4

Readiness

Whole routine: the game available today

5.0/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *You arrive with little time before your tee slot, and your longer clubs feel unfamiliar in the warm-up. You can still enjoy the round, but your plan needs to match the game you have brought.*

WHAT THIS FACTOR IS

Readiness is the game available today. It matches your plan to the body, swing, numbers and equipment actually present. Not ready means the plan asks for a shot you cannot reliably produce today. Ready means you can stand over the ball and execute what has actually been prepared. Play the game you brought to the first tee.

Knowledge builds the base · context tests fit · dialogue formulates the plan · self provides presence

Your Readiness score of 5.0 is a working area: your preparation and today's available game do not yet connect consistently. At your stage, you do not need every club working perfectly. You need a clear account of what is available and a plan you can actually use.

HOW THIS HITS YOUR ROUTINE

Readiness runs through the whole routine: an available body, numbers and shot in the pre-shot; an available swing and trust in the swing; and available attention to learn in the post-shot.

> *You give your scoring more stability when your plan uses shots you can produce today.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Listen as your playing partner finishes warming up: notice whether today's ball flight becomes a clear, spoken plan for the round.

IF YOU DO JUST ONE THING Put today's available game into a plan you can say plainly.

THE FOUR SUB-FACTORS OF READINESS

KNOWLEDGE **Foundation** — WORKING AREA

Your Foundation at 5.9 needs more consistent preparation and reliable evidence from your practice.

CONTEXT **Fit** — WORKING AREA

Your Fit at 5.3 needs closer matching between today's capacity, equipment, conditions and available time.

DIALOGUE **Formulation** · START HERE — WORKING AREA

Your Formulation at 4.1 needs a clearer description of today's game and the plan it supports.

SELF **Presence** — WORKING AREA

Your Presence at 4.7 needs your body, attention, energy and intention gathered for the whole routine.

PRIMARY ADVICE

Before leaving the practice area, put today's available game into one sentence covering your dependable clubs and comfortable shot shape.

Extra tip: *Make your preparation manageable: allow time for a few familiar shots, check your equipment, and arrive without needing to rush.*

DRILL 1 · ON THE COURSE

During your warm-up, sample a short iron, a longer club and your tee-shot option. Use what you see to describe the game you can bring to the first tee.

DRILL 2 · AT HOME

At home, prepare two short round plans: one for a full warm-up and one for limited time. Include equipment checks and the clubs you would prioritise.

OBSERVATION POINT · FORMULATION — *"Call today's game."*

Watch for: Cannot diagnose present readiness or state one plan that fits current capacity and conditions.

Ask: What game have you brought today? **Probe:** Say one plan that fits it.

KEY LINE FOR THIS FACTOR

"You can play with purpose without bringing your best swing to the first tee."

ONE EXTRA INTERVENTION

Learning by observing

With each of your four factors comes an **observation point**. That is no side note — it is an intervention in itself. Your sharpest insight into your own mental game often comes not from looking inward, but from *someone else* watching.

When you deliberately watch how a playing partner handles pressure, a missed putt, a risky decision, two things happen at once. You see a pattern you do not spot so easily in yourself — the tension in the shoulders on the first tee, the tempo that changes after a bad shot, the club picked too quickly. And right at that moment you become more aware of your own routine and your own factors. Observing makes the abstract concrete.

> *The beauty is: it costs you nothing extra. You already play in company. By watching one thing in someone else for one round at a time, you build an eye for the mental game — which you then turn on yourself. What you learn to spot in others, you recognise in yourself.*

HOW TO GO ABOUT IT

Pick one factor per round. In yourself or in one playing partner, watch the observation point that belongs to it. Fact first — what a camera would capture — and only then the meaning. Wait for three comparable moments before you call it a pattern. After the round, ask yourself: what did I see, and did I recognise it in myself too?

FINALLY

This is *yours now*

Sam, picture reaching the next fairway and noticing the breeze before you notice the replay in your head. You do not have to become indifferent to enjoy that moment. You can care about the shot and still give the rest of the round your attention. There is more of the game waiting for you there.

WANT TO GO FURTHER?

The next step *in your story*

Reading a report changes nothing on the course yet — you know that. The real gain, and the real fun, only start when you pick one thing and work on it. And you do not have to do that alone.

For that, MentalRoutine builds from exactly this profile a personal **Training report**: a personal workbook of around ten pages, tuned to your scores and your level of play. No generic tips, but exercises, mantras and stories that fit where you stand now — the logical next step after what you have just read about yourself.

YOUR PERSONAL ADVICE

Where you are best *placed to begin*

We laid your full profile side by side: your eight steps with their forty components, and your four influencing factors. Below are the three topics where training pays off most for you now — your two biggest opportunities and your strongest step. The same three are waiting as advice in your portal.

YOUR THREE RECOMMENDED TOPICS

Each its own training report — together exactly the three included with your assessment.

1. Acceptance
start with: Let go

IMPROVE
score 5.6/10

2. Analysis
start with: Mental or technical?

IMPROVE
score 6.0/10

3. Trust
start with: Don't steer

LEVERAGE
score 7.8/10

OR CHOOSE AN INFLUENCING FACTOR

You can also spend one of your three reports on a factor. For you, **Readiness** (5.0/10) is the obvious choice — start there with **Formulation** — *"Call today's game."*

HOW TO START

Start with the first topic: that is where the most is to be gained. Rather go another way? In your portal you choose freely from all twelve topics.

Your training reports are waiting in your portal — that is where you choose what to pick up first.

Go to the portal →

AFTER THIS REPORT

How your *training works*

HOW A TRAINING REPORT WORKS

A STEP OF YOUR ROUTINE

Trains one of your eight steps through five angles, tuned to your score on each component. Choose this if you want to work on a part of your routine.

AN INFLUENCING FACTOR

Trains one of your four factors through the four lenses: knowledge, context, dialogue and self. Choose this if the terrain around your routine costs you most.

> Nothing extra to arrange: three training reports are included with your assessment, and you choose them yourself from all twelve topics — your eight steps and your four factors. Everything is ready in your portal, at your own pace.

TWO WAYS TO GROW

IMPROVE

With a lower score. The report motivates and builds: small, doable steps that make your weak spot stronger bit by bit. This is often the quickest gain.

LEVERAGE

With a high score. The report inspires: how do you use a strength you already have even more deliberately, so it wins you shots on the holes that count?

WHEN TO MEASURE AGAIN?

Give yourself 3 to 6 months to work with your training reports and the advice in this report, and make sure you really practise in that period — count on at least 6 to 10 rounds or 8 to 12 practice sessions where you work on it deliberately. Then take the MentalRoutine Assessment again. Where you truly changed something, you will see it as a clear shift in your profile — not in a single decimal, but in the direction a whole step moves.

"The greens are not going anywhere. The game will always be here for you. What you choose to do with what you've learned — that's entirely yours."

— MENTALROUTINE · WWW.MENTALROUTINE.COM
