READING GUIDE

This report — *how to read it*

1 **Start here: Mental Index & Archetype** (next page)
Your overall score and archetype — a 2 minute read, direct insight into your mental profile.

2 **Then go to Priorities + Action plan** (page 11–12)
Three concrete priorities and an action plan for before, during and after the round. Cut out the tear-off card — take it to the course (in your bag or to a partner).

3 **Use Part 2 as a reference or with your coach**
Per step a scene on the course you will recognise, your five components and concrete drills — then your four factors with their lenses. Ideal to share with a teaching professional or sport psychologist before a session.

The holes and moments we describe are recognisable example situations based on your answers — not rounds we watched, but a mirror of how you describe yourself on the course.

YOUR 8 STEPS — QUICK GUIDE

Focus ★ Strongest step	7.2/10
Concentration	6.6/10
Conviction ▼ Biggest opportunity	3.8/10
Trust	5.4/10
Evaluation	6.1/10
Acceptance	6.8/10
Analysis	5.9/10
Transfer	5.0/10

HOW DO YOU READ A SCORE?

7.0–10	**Strength** — build on this; use it as an anchor under pressure.
4.0–6.9	**Working area** — functional but inconsistent; focused attention pays off.
0–3.9	**Growth area** — most to be gained here; this step costs you energy now.

'Strongest step' and 'biggest opportunity' compare your steps with each other; strength, working area and growth area say where a score sits on the scale.

WHERE YOUR MENTAL INDEX (5.8) SITS

0–3.9 · Growth area | Working area | 7.0–10 · Strength

MENTAL INDEX & ARCHETYPE

MENTAL INDEX

The higher your Mental Index, the stronger you experience your own mental game

A 5.8 says your course management is already carrying you — but your swing-moment is dragging the number down. You arrive at the ball with a good plan and then don't fully pull the trigger on it.

YOUR ARCHETYPE

The Strategist

You win holes before you swing. Your plan is your edge.

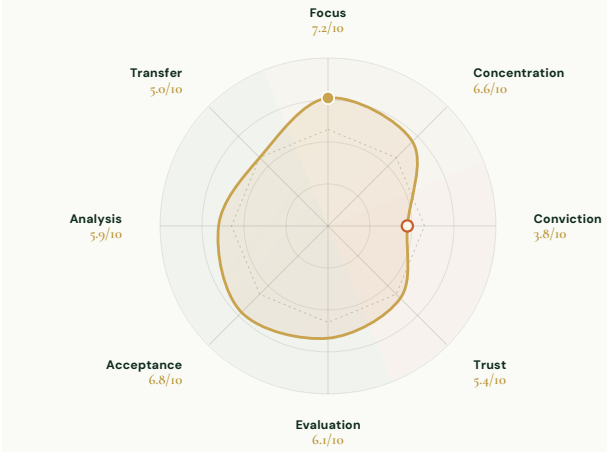

"Golf is a game that is played on a five-inch course — the distance between your ears."

— BOBBY JONES

MENTAL FINGERPRINT

Your unique *mental profile*

PRE-SHOT SWING POST-SHOT

YOUR THREE PHASES

Pre-Shot	Focus · Concentration	6.9/10
Swing	Conviction · Trust	4.6/10
Post-Shot	Evaluation · Acceptance · Analysis · Transfer	6.0/10

YOUR FOUR INFLUENCING FACTORS

Risk appetite	5.2/10
Pressure	4.6/10
Resilience	6.4/10
Readiness	6.0/10

Not steps, but the conditions that decide whether your routine holds. Covered in Part 2.

5.8
MENTAL INDEX

The further a point sits from the centre, the stronger that step. Your silhouette shows at a glance where your foundation lies — and where the most is to be gained.

INTRODUCTION

Welcome to *your report*

FOR YOU

Alex, this isn't a scorecard for your mind. It's a mirror held up to the way you already play — the sharp parts and the shaky parts both. Nothing here is a verdict. Read it as a conversation with someone who studied your answers closely and recognised a very specific golfer in them.

WHAT YOUR SILHOUETTE SAYS

You see the course better than most players at your level — targets, risk, the smart miss, all of it clear before you swing. But between that clear plan and the ball there's a gap, and that's where strokes leak away. You trust your reading right up until the moment you have to commit your body to it, and then a flicker of doubt slips in. The plan is your edge; believing in it is your unfinished work.

Where the shape bulges outward lies your foundation. Where it caves in lies the most gain. Part 2 tells you per step what to do about it.

"If I commit to the shot and trust my routine, the result takes care of itself."

— ANNIKA SÖRENSTAM

ABOUT THIS REPORT

How does *the MentalRoutine work?*

THE MODEL AND THIS REPORT

The model is built on sport-psychology research — how you steer attention, handle tension and stay motivated — and tested on more than 1,000 golfers, from handicap 0 to 36+. The next page shows at a glance how it fits together: three phases, eight steps with five components each, and four influencing factors with four lenses each. The report has two parts. Part 1 is your portrait: what your scores say, where your strength lies and where you start. Part 2 is your reference: every step and then every factor worked out in full, with exercises.

HOW YOUR SCORES ARE BUILT

You answer a series of questions about your routine and the factors around it — 20 to 25 minutes in all. Per step we measure five components (forty in all) and per influencing factor four sub-factors (sixteen in all). Every score is a mark from 0 to 10, based on the maximum attainable score on that component — so you see at a glance where you are strong and where the most room lies. The Mental Index (0–10) sums your eight steps in one number.

Important: these scores measure how you experience your own game — not an outside, measured performance. Read a 10 as "the top of the scale", not as perfection. Because it reflects your own experience, the scores point you straight to where it chafes for you.

THIS REPORT IS UNIQUE TO YOUR PROFILE

The course scenes, comparisons and advice in this report are not generic — they are built from your own answers and handicap (14.2). It works for golfers at every level, from handicap 0 to 36+. There is no "right" or "wrong" mental profile. This report helps you understand yourself better; it is not a medical or psychological diagnosis. Struggling with severe tension or stress around your game? Speak to a sport psychologist.

THE MODEL

One routine. Eight steps. *Every shot.*

Not eight separate parts, but one routine you run in the same order on every shot — and the terrain that routine has to get through. The shot routine tells you when something happens (before, during or after the shot), the mental routine what you do at that moment, and the influencing factors what makes it easier or harder.

PRE-SHOT		SWING		POST-SHOT			
1	2	3	4	5	6	7	8
Focus	Concentration	Conviction	Trust	Evaluation	Acceptance	Analysis	Transfer
Risk appetite 5.2		**Pressure** 4.6		**Resilience** 6.4			
Interferes with your target and plan: the risk you accept before the shot.		Interferes with conviction and a free swing: under real pressure your game falls back on what is ingrained.		Interferes with processing after the shot — and decides whether a miss carries into the Focus of your next shot.			

↻ *Step 8, Transfer, hands the next shot its Focus — that is how the loop closes.*

READINESS — THE FOUNDATION 6.0

Your capacity to run any of this at all: built over time, plus your state today. Readiness is not one point in the loop, but the ground under every step.

HOW TO USE THE MODEL — FOUR QUESTIONS FOR EVERY SHOT

1 · When?
THE SHOT ROUTINE
Before, during or after the shot: three phases.

2 · Which step?
THE MENTAL ROUTINE
Eight steps, each with five trainable components — forty in all.

3 · What was in play?
THE INFLUENCING FACTORS
Four factors, each seen through four lenses: knowledge, context, dialogue and self — sixteen in all.

4 · What now?
ONE ACTION
One exercise, cue or reset for the next comparable shot. You find them per step and per factor in Part 2.

Together 56 measurement points: 40 in your routine, 16 in the factors around it. Every piece of advice in this report works on one of them.

THE SHOTROUTINE

Pre-Shot · Swing · *Post-Shot*

Your Pre-Shot is your home — the reading, the picture, the risk, it all clicks before you move. Then comes the swing, and that's where it wobbles: the clear plan meets a body that isn't quite sold on it. Your Post-Shot is steady enough to keep you level, but it can't fully rescue a shot you half-committed to.

PRE-SHOT
Preparation

6.9/10

FOCUS
CONCENTRATION

You read the hole and pick your line with real clarity — the thinking part of your game is already strong.

Influenced by: **Risk appetite** 5.2/10

SWING
Execution

4.6/10

CONVICTION
TRUST

You arrive over the ball with a good plan but let a last-second doubt soften the swing you meant to make.

Influenced by: **Pressure** 4.6/10

POST-SHOT
Processing

6.0/10

EVALUATION
ACCEPTANCE
ANALYSIS
TRANSFER

You stay fairly level after a shot, though the sting of a half-committed miss lingers longer than it should.

Influenced by: **Resilience** 6.4/10

Readiness 6.0/10 — the foundation under all three phases

ENERGY LEAK

The leak runs from Pre-Shot into the swing: you build a crisp plan on the tee, then ease off it the instant the club starts back.

PART 1 · THE BIG PICTURE

Your Best Reading, Your Worst Doubt

On the 2nd you stood over a mid-iron, picked the back-left edge, judged the wind, chose your line — a textbook read. Then over the ball something crept in, and the swing you made wasn't the swing you planned. Here's what's really going on, Alex: the same mind that reads a hole this thoroughly also keeps the door open just a crack too long, and that crack is where doubt walks in.

> *The mind that plans every angle also leaves one angle open for doubt.*

STRONGEST STEP

Focus

7.2/10

Use your reading as your steadying anchor when a round gets tight — on the holes that scare you, slow down and let the clarity of your plan quiet the nerves.

BIGGEST OPPORTUNITY

Conviction

3.8/10

"I planned it, now I play it."

On the 6th, standing over the shot you've already chosen, when that last flicker of doubt tries to soften your swing.

YOUR NEXT STEPS

Three routes *forward*

ROUTE 01

More *enjoyment* in the game

Picture the holes where you usually tighten up — the long par-4 into the wind, the tee shot with water left. When you learn to commit to the line you already picked, those holes stop feeling like a gamble and start feeling like a decision made.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · CONCENTRATION · CONVICTION

Acceptance and Concentration already keep your head light between shots — lean on them. Add a little more Conviction and the good rounds stop feeling like luck.

ROUTE 02

Better *performance*

For lower scores at your level, the gap isn't in reading the hole — you've got that. It's in the two feet of swing after you've decided. Close the door on doubt at the top of the backswing and the middle of your scorecard quietly tidies up.

GIVE THESE STEPS PRIORITY

CONVICTION · TRUST · TRANSFER

Conviction and Trust are where your planned shots turn into committed ones. Transfer makes sure each round's lesson sticks instead of repeating.

ROUTE 03

Enjoyment & performance

The balanced road keeps your strong head and fixes your shaky swing-moment at once. You build on the parts that already carry you — your reading, your calm — while you close the one gap that costs you most. That's how a scoring round and an enjoyable one become the same round.

GIVE THESE STEPS PRIORITY

CONVICTION · ACCEPTANCE · FOCUS

Conviction is the growth, Acceptance keeps you steady while you build it, and Focus is the anchor you already own. Together they turn a good plan into a committed round.

PRIORITIES

Where to begin — *your focus*

LEVERAGE YOUR STRENGTHS

FOCUS · ACCEPTANCE · CONCENTRATION

When a hole gets tight, fall back on your reading — it's the most reliable thing you own. Pick the target, weigh the risk, and let that clarity settle you before you move. Your calm between shots is the second anchor: use the walk to the ball to arrive quiet, not cluttered.

HANDLING YOUR OPPORTUNITIES WELL

TRUST · TRANSFER · CONVICTION

Don't try to fix Trust, Transfer and Conviction all at once — that's three swings' worth of thinking over one ball. Start with Conviction alone: it feeds the other two. Once you back your plan without flinching, trusting the swing and learning from the miss get easier on their own.

YOUR TOP 3 PRIORITIES NOW

1. Conviction first — it's your biggest opportunity, and backing the plan you already made is the fastest way to turn good reads into good shots.
2. Trust second — once you believe in the shot, let the swing run free instead of steering it to the target.
3. Transfer third — so the miss you accepted actually becomes a lesson you carry, not one you repeat two holes later.

YOUR 4 WEEKS — STEP BY STEP

WEEK 1
Say your target out loud, then commit — no second-guessing over the ball.

WEEK 2
Add one slow breath before each swing to settle the doubt.

WEEK 3
Make your fullest, freest practice swing match the real one.

WEEK 4
Blend target, breath and free swing into one smooth routine.

GETTING TO WORK

Your personal *action plan*

MEASURE IT ON THE COURSE — THIS ROUND

- ☐ Count how many times you changed your mind over the ball after you'd already picked your line and club.
- ☐ Tally the holes where you decelerated or steered the swing instead of letting it run through.
- ☐ Note each shot where a lesson from an earlier hole actually changed what you did later.

TEST THIS REPORT'S CORE YOURSELF

☐ Over three rounds, tally after each miss whether it was a well-struck shot with bad luck or a half-committed swing you felt coming. If the half-committed ones clearly outweigh the rest, this report's core holds. If they're even, feel free to adjust the diagnosis.

Before
THE ROUND

- Pick one hole on the card where you'll commit fully, no matter the trouble.
- Hit three range balls where you say the target aloud before each swing.
- Decide your pre-shot routine length and keep it identical all round.

During
ON THE COURSE

- Once you've picked the line, don't re-open it — step in and swing.
- Take one slow breath at address to quiet the last-second doubt.
- Let your through-swing finish full, especially on the shots you fear.

After
REFLECTION

- Mark the holes where you backed your plan versus the ones you flinched.
- Write down the one shot you'd replay with full commitment.
- Carry a single lesson to the next round, not a list.

TAKE THIS TO THE COURSE · PUT IT IN YOUR BAG

PRE-SHOT CUE	Target picked, club chosen — now step in and go.
RESET LINE	That shot's gone; this one's clean.

YOUR PROMISE SHEET

Alex

Alex, from your answers one thing jumps out: you think your way around a course better than most players ever will. You see the trouble, weigh the smart miss, pick the line — and you enjoy that part. But you also told me, in your own way, that something softens between the plan and the swing. That's not a flaw in your golf; it's the one door left open by the very mind that plans so well.

YOUR MAIN MANTRA — THE LINE FOR THIS ROUND

> *"I planned it, now I play it."*

SIGNATURE

DATE

MentalRoutine Assessment · Alex · November 2, 2026

"The mind messes up more shots than the body."

— TOMMY BOLT

DEEP DIVE

Questions to *think about*

Write your first thoughts below. There are no right or wrong answers — only honest ones. You need not answer them straight away — feel free to come back later.

ON YOUR STRONGEST STEP — FOCUS

When you've read a hole perfectly, what's the first thing you do that proves you believed your own plan?

ON YOUR BIGGEST OPPORTUNITY — CONVICTION

What exactly happens in the half-second before your swing that makes you ease off the shot you chose?

OVERALL — YOUR COMPLETE PROFILE

If you trusted your reading as fully as you trust your eyes, what would change on your card?

YOUR INTENTION FOR THE NEXT ROUND

Which single mental habit will you build in over the next four weeks? Describe when, how and what for.

PART 2 OF THE REPORT

Your Complete *Profile*

Per step and per factor — worked out in full

In this part each of your eight steps is worked out in full: a scene on the course you will recognise, your score, the five components read personally, concrete advice, two exercises and a mantra. Then come your four influencing factors, each with the four lenses. Use Part 2 as a reference — or share it with your coach.

THE EIGHT STEPS

1. Focus	7.2	**17**
2. Concentration	6.6	**19**
3. Conviction	3.8	**21**
4. Trust	5.4	**23**
5. Evaluation	6.1	**25**
6. Acceptance	6.8	**27**
7. Analysis	5.9	**29**
8. Transfer	5.0	**31**

THE FOUR FACTORS

Risk appetite	5.2	**34**
Pressure	4.6	**36**
Resilience	6.4	**38**
Readiness	6.0	**40**

FOR YOUR COACH — IN 90 SECONDS

BIGGEST GAIN	Biggest gain is Conviction: he reads and plans at a level above his handicap but softens the swing at commitment, leaking those strokes.
CORE DIAGNOSIS	His strongest trait (Focus/planning) and weakest (Conviction) are the same thorough mind — it reads superbly but keeps the decision open a beat too long, so doubt enters at address and the swing decelerates.
START QUESTION	*"When he stands over a shot he's already chosen, what exactly makes him re-open the decision instead of committing?"*

Every step has its own story.
This one is yours.

STEP 1 OF 8 · PRE

Focus

Influenced by: Risk appetite 5.2/10 · Readiness — the foundation

7.2/10

STRENGTH ★ Strongest step

A STRONG SIDE OF YOUR GAME

"You see a hole three shots deep before anyone's teed up."

> *On the 2nd, a mid-iron into a firm green with the wind off the right, you studied the shot and picked the back edge instead of the flag. Short-sided was the trap, you saw it, and you aimed to the fat of the green. Two putts, easy par — the read saved you.*

DEFINITION

You pick the target area, settle your club choice and see the ball flight before you swing. This includes course management: how do you play the hole strategically, in a way that suits your own game? Focus must be fully finished before you move on to concentration.

When you stand on a tight par-4 with trouble right, you already know the smart line and the club that fits it. That clarity buys you pars that other players at your level throw away.

BLIND SPOT?

On the closing holes, legs tired and the card in your head, you may grab the first picture that feels good enough instead of the best one. Worth checking once with your pro whether your speed turns into shortcuts late.

ON THE CARD · YOUR CLEAR READING TURNS TIGHT HOLES INTO ROUTINE PARS THAT LESS SURE PLAYERS BOGEY.

You arrive over the ball with a clear picture, and that quiet certainty is rare.

IF YOU DO JUST ONE THING **Name your landing spot out loud before every full shot.**

Focus is the difference between aiming 'at the green' and aiming at the back-left quarter where the miss still leaves a putt.

THE FIVE COMPONENTS OF FOCUS

Pick a target · START HERE — WORKING AREA

Picking a target lands well but sometimes stays broad — you aim at the green, not a quarter of it.

See the shot — STRENGTH

Seeing the shot comes naturally; you picture the flight before you move, and it's vivid.

Judge it honestly — STRENGTH

You judge your real distance honestly, rarely fooling yourself into a club you can't hit.

Weigh the risk — STRENGTH

Weighing the risk is instinctive — the smart miss is usually chosen before you notice choosing it.

Commit to it — STRENGTH

Committing to the read is strong; once you've decided the line, you don't drift off it.

It starts with the picture: because you see the shot so vividly, you judge distance honestly and weigh the risk cleanly — the only soft spot is aiming slightly broad before you lock on.

PRIMARY ADVICE

Before each full shot, name your exact landing spot aloud — not 'the green', but 'front-right of the flag'. Then step in.

Extra tip: *On the tee of a trouble hole, pick your target and your bail-out in the same breath, so the smart miss is already decided.*

MENTAL DRILL 1

On the course, play three holes where you say your precise target aloud before every full shot, even the easy ones. Succeed if you name all of them without vagueness. Once that's automatic, do it with an opponent watching and the pressure on.

MENTAL DRILL 2

On the range, hit 10 balls to 5 different targets, switching every shot. Succeed if you fully re-picture the new target before each swing, never repeating the last one on autopilot. Once easy, add a fairway width you must 'hit' to pass.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I see the shot, I name the shot."

STEP 2 OF 8 · PRE

Concentration

Influenced by: Risk appetite 5.2/10 · Readiness — the foundation

6.6/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You let the noise and the last hole fall away before you swing."

> *On the 4th, a group shouting on the next fairway and a bad drive still fresh from the 2nd, you stepped back, let it settle, and returned to the ball clean. No clutter, no replaying the last hole. You struck it flush and walked on.*

DEFINITION

You put all your attention on that one task — the ball to the target area — and shut out everything that is irrelevant right now: the last shot, the state of the match, outside noise and inner doubt.

When a playing partner chatters or the last hole stung, you can still arrive at the ball with a quiet head. That reset keeps one bad hole from becoming three.

> ON THE CARD · YOUR CLEAN RESET KEEPS ONE SOUR HOLE FROM SPILLING INTO THE NEXT TWO OR THREE.
>
> *You park the noise and the last shot, so you step in clear more often than not.*

02

IF YOU DO JUST ONE THING **Step back once and reset before you walk into the shot.**

Concentration is the difference between hearing the group behind you and actually letting that sound change your swing.

THE FIVE COMPONENTS OF CONCENTRATION

Stay with it · START HERE — WORKING AREA

Staying with the shot holds most of the time, but a long round can loosen your grip on it.

Park distractions — STRENGTH

Parking distractions is a real strength — chatter and a bad hole slide off you.

Eye on ball — WORKING AREA

Your eye stays on the ball through most swings, though late fatigue can nudge it off.

Reset — WORKING AREA

Resetting after a disturbance works well; you step back and return quiet.

Relax between shots — WORKING AREA

You relax between shots naturally, letting the walk clear your head before the next one.

Parking distractions is the engine here: because noise slides off you, your reset works and your eye settles — the one place it dips is staying with it deep into a tiring round.

PRIMARY ADVICE

Between shots, let your eyes go wide and your shoulders drop on the walk, then narrow back in only when you reach the ball.

Extra tip: *Build a fixed 'trigger' — a glance at the target, one waggle — that tells your mind the thinking is done and the shot begins.*

MENTAL DRILL 1

On the course, play 3 holes where you deliberately look away from the ball, take a breath, then return your eyes and swing within five seconds. Succeed if you hold stillness through impact each time. Once steady, do it on a knee-knocker putt.

MENTAL DRILL 2

On the range, have someone talk or move during your takeaway on 10 balls. Succeed if 8 of 10 swings stay committed with no flinch. Once easy, raise the stakes by putting a small bet on each ball.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Noise out, ball in, I'm here now."

STEP 3 OF 8 · SWING

Conviction

Influenced by: Pressure 4.6/10 · Readiness — the foundation

3.8/10

GROWTH AREA

▼ Biggest opportunity

ROOM TO GROW IN THIS STEP

"You pick the right shot, then leave a door open for doubt."

> *On the 6th, a long par-4 with water left, you'd read it right and picked the 5-iron lay-up to the fat side. Then over the ball a voice asked 'is it enough?', and the swing came out soft and short. You knew the line; you just didn't back it.*

DEFINITION

You are convinced you will hit the shot exactly as intended. You want it, you can do it, you do it. Doubt is useless and has to be switched off completely, because without conviction there is no good performance.

When you stand over the shot you've already chosen, a last-second doubt softens the swing and the ball comes up short of your plan. This is where your good reading quietly leaks away.

ON THE CARD · GOLFERS WITH THIS PATTERN LEAVE STROKES IN THE SHORT, SOFT SWINGS THEY NEVER FULLY BACKED.

You believe the plan right up to the ball, then flinch — and the swing shows it.

03

IF YOU DO JUST ONE THING **Once you've chosen, step in and swing without re-asking the question.**

Conviction is the difference between a golfer who picks a club and one who picks it, then wonders about it all the way through the swing.

THE FIVE COMPONENTS OF CONVICTION

Believe in it · START HERE — GROWTH AREA

Believing in the shot is the softest spot — the doubt arrives just as you settle over it.

Fully commit — WORKING AREA

Fully committing wavers; you start the swing half-sold more often than you'd like.

Fire yourself up — GROWTH AREA

Firing yourself up rarely happens — you stay flat when the shot needs a little fire.

Take it on — WORKING AREA

Taking on the bold-but-smart shot is hard; you default to the safe club under doubt.

Back yourself — GROWTH AREA

Backing yourself is shaky — your body questions the plan your head already settled.

It starts with belief: when you don't quite believe the shot, you won't fire yourself up or take it on, and the whole swing arrives half-committed — fix belief and the other four lift with it.

PRIMARY ADVICE

Once your line is set, say 'done' under your breath, then step in — treat re-opening the decision as off-limits.

Extra tip: *On one trouble hole per round, deliberately back the aggressive-but-smart shot you'd normally talk yourself out of, and swing it full.*

MENTAL DRILL 1

On the range, pick a demanding target on 10 balls; before each, say 'this one' and commit fully. Succeed if 8 of 10 swings finish full with no deceleration. Once easy, take it to the course on your first trouble hole.

MENTAL DRILL 2

On the course, play 5 holes where the moment doubt appears over the ball, you step back and re-start the routine rather than swinging unsure. Succeed if you never swing while doubting. Once reliable, hold it on a pressure putt.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I chose it, so I swing it full."

STEP 4 OF 8 · SWING

Trust

Influenced by: Pressure 4.6/10 · Readiness — the foundation

5·4/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

"You know the swing you want, then try to steer it instead of letting it go."

> *On the 8th, a short pitch over a bunker to a tight pin, you'd pictured it fine — then your hands took over and steered the club, decelerating into the ball. It came up in the sand. The plan was right; the guiding ruined it.*

DEFINITION

You hit the shot with full commitment: no hesitation, nothing held back. This is 'stand there and do it'. The prep is done; now the loyal execution, with the right balance of power and calm.

When you've chosen the shot, your body sometimes won't let the swing run — it steers toward the target and the strike suffers. On the short, delicate shots this costs you most.

ON THE CARD · YOU GIVE BACK GOOD PLANS IN STEERED, DECELERATED SWINGS THAT YOUR SHORT GAME CAN'T AFFORD.

You half-trust the swing, so your freest shots never quite come out free.

04

IF YOU DO JUST ONE THING **Pick the shot, then let the swing run — hands off the wheel.**

Trust is the difference between swinging freely at the target and guiding the clubhead there inch by inch.

THE FIVE COMPONENTS OF TRUST

Don't steer · START HERE — WORKING AREA

Not steering is the weakest part — your hands take over on the shots that need freedom most.

No swing thoughts — WORKING AREA

Swing thoughts stay fairly quiet, so clutter isn't usually what trips you.

Hit your plan — WORKING AREA

Hitting your plan lands about half the time — the chosen shot and the actual one often differ.

Stay loose — WORKING AREA

Staying loose works reasonably well until a tight pin tightens your hands.

Practise on purpose — WORKING AREA

Practising on purpose is middling — your range work doesn't always carry its intent to the course.

The bottleneck is steering: your head is quiet and your body fairly loose, but the moment your hands try to guide the club, the plan and the strike part ways.

PRIMARY ADVICE

On full shots, make your practice swing the real one — same length, same freedom — then step in and repeat it without adjusting.

Extra tip: *On chips and pitches, pick a spot to land the ball and swing to a finish, letting the clubhead release instead of guiding it.*

MENTAL DRILL 1

On the range, hit 10 shots where your only job is a full, loose finish — don't watch the ball until you've held the pose. Succeed if 8 feel free, not steered. Once easy, do it on the course after a bad hole.

MENTAL DRILL 2

Around the green, hit 10 chips where you say 'release' as the club starts down. Succeed if you never decelerate, even on the ones that miss. Once reliable, take it to the tight short-sided lie you usually steer.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I let it go, I don't steer it."

STEP 5 OF 8 · POST

Evaluation

Influenced by: Resilience 6.4/10 · Readiness — the foundation

6.1/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You judge a miss by feel before you've actually looked at it."

> *On the 10th, your approach drifted right and short into the greenside rough, and you muttered 'awful' before you'd even seen where it lay. Up close it was a decent lie, ten feet off, an easy chip. You'd already written it off too harshly.*

DEFINITION

You note objectively what the ball did — strike feel, sound, direction, ball flight, distance, where it finished, divot — and match it against your Focus plan. This sets up the Analysis.

When a shot misses, you tend to label it before you've truly watched where it went. That rough first read makes the next shot harder than it needs to be.

ON THE CARD · YOU MAKE THE NEXT SHOT HARDER BY WRITING OFF A LIE BEFORE YOU'VE EVEN SEEN IT.

You judge the miss by feeling, so your head carries a heavier round than the lie deserves.

05

IF YOU DO JUST ONE THING **Before reacting, say exactly where the ball finished and why.**

Evaluation is the difference between 'that chip was terrible' and 'that chip ran four feet past, a touch firm'.

THE FIVE COMPONENTS OF EVALUATION

Watch closely · START HERE — WORKING AREA

Watching closely slips — you react to the strike before the ball has finished.

Judge the miss — WORKING AREA

Judging the miss works fairly well once you do look; you read direction accurately.

Stay level-headed — WORKING AREA

Staying level-headed holds some of the time, but a bad miss can tip the read.

Check your plan — WORKING AREA

Checking against your plan happens reasonably often — you ask whether the shot matched the intent.

Fixed order — WORKING AREA

Your fixed order of looking is decent, giving your post-shot read some consistency.

It starts with the looking: because you react before the ball settles, you misjudge the miss, which tips your mood and skips the check against your plan — fix the watching and the rest steadies.

PRIMARY ADVICE

After each shot, let the club settle back in the bag, breathe out once, then state out loud exactly where the ball ended and how far off line.

Extra tip: *Watch the ball land before you react — track it fully down, so your judgement comes from what happened, not from the feel at impact.*

MENTAL DRILL 1

On the course, for 5 missed shots, pause and describe the result in facts — direction and distance off line — before any emotion. Succeed if you do it on all 5. Once natural, add it after good shots too, so the habit holds everywhere.

MENTAL DRILL 2

On the range, hit 10 balls and call the exact miss aloud before the ball lands. Succeed if 8 calls match what you then see. Once accurate, do it with a wind you must account for.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I look first, I judge second."

STEP 6 OF 8 · POST

Acceptance

Influenced by: Resilience 6.4/10 · Readiness — the foundation

6.8/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You take a miss on the chin and keep the round in one piece."

> *On the 12th, after that steered pitch on the 8th still nagged, you pushed a drive into trees — and instead of stewing, you shrugged, found the gap, punched out, and made bogey without a word. You were kind to yourself and played on. One hole stayed one hole.*

DEFINITION

You accept the outcome of your shot, good or bad. It happened; you cannot change it any more. Emotions are allowed, but they have to be dealt with before you move to the next shot.

When a drive finds trouble, you rarely let it drag the next three holes down with it. That steadiness is why a bad swing stays a bad swing, not a ruined round.

ON THE CARD · YOU KEEP ONE BAD HOLE FROM BECOMING THREE, WHICH PROTECTS MORE ROUNDS THAN YOU REALISE.

You let misses go, so your round stays lighter than the scorecard sometimes earns.

06

IF YOU DO JUST ONE THING **Loosen your glove after a miss, breathe out, then walk on.**

Acceptance is the difference between a golfer who bogeys and moves on and one who bogeys and then doubles the next in a temper.

THE FIVE COMPONENTS OF ACCEPTANCE

Let go · START HERE — WORKING AREA

Letting go works most of the time, though a really galling miss can cling a hole longer.

Be kind — STRENGTH

Being kind to yourself is a genuine strength — you don't pile on after a bad shot.

Keep perspective — WORKING AREA

You keep perspective well, remembering one swing isn't the whole round.

Play on — STRENGTH

Playing on is a real asset; you commit to the next shot rather than stewing.

Enjoy good shots — WORKING AREA

You enjoy your good shots fully, letting them land before moving on.

Being kind to yourself is the hub: because you don't pile on, you keep perspective and play on cleanly — the only slight drag is a galling miss that lets go a touch slower.

PRIMARY ADVICE

After a miss, pull your glove tab loose and let your shoulders drop, breathe out slowly, then let the shot be gone before you reach the ball.

Extra tip: *Give yourself one honest word of kindness — 'tough lie', not 'idiot' — so the next swing starts from calm, not frustration.*

MENTAL DRILL 1

On the course, after your first 3 missed shots, loosen your glove and take one slow exhale within three seconds before walking on. Succeed if you do all 3 without a harsh word. Once easy, extend it to every miss in the round.

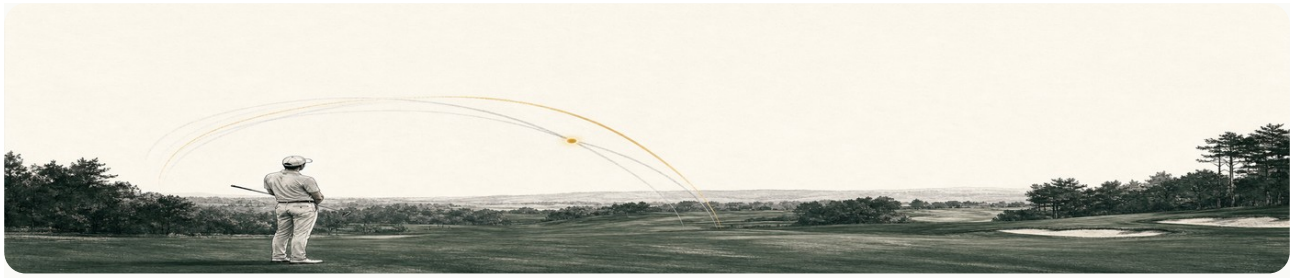

MENTAL DRILL 2

At home, picture your three worst recent misses and practise the glove-loosen-and-breathe for each, 5 reps. Succeed if your shoulders actually drop each time. Once grooved, it fires automatically on the course when a real one stings.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"It's done, I walk on light."

STEP 7 OF 8 · POST

Analysis

Influenced by: Resilience 6.4/10 · Readiness — the foundation

5·9/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You can diagnose sharply, when you stop to do it honestly."

> *On the 15th, after a thin wedge, you half-wondered if it was the swing or the nerves, landed on 'bad backswing', and moved on without really deciding. The truth was you'd steered it — same as the 8th — but you didn't name it. The pattern slipped past you.*

DEFINITION

You compare the shot you hit with the shot you had in mind during Focus. You look for the main cause of any difference — mental as well as technical — and draw one clear conclusion.

When a shot misses, you can find the real cause — but you don't always stop to look, and the same fault repeats. The skill is there; the habit of using it isn't quite.

ON THE CARD · YOU REPEAT THE SAME MISS ACROSS A ROUND BECAUSE YOU NEVER QUITE NAMED WHY IT HAPPENED.

You carry repeat faults into later holes because the miss went undiagnosed.

07

IF YOU DO JUST ONE THING **After a miss, decide out loud: mental or technical, pick one.**

Analysis is the difference between 'I keep missing right' and 'I'm steering under pressure, not swinging through'.

THE FIVE COMPONENTS OF ANALYSIS

Mental or technical? · START HERE — WORKING AREA

Telling mental from technical lands unevenly — you often guess rather than decide.

One cause — WORKING AREA

Settling on one cause works fairly well once you commit to looking.

Spot the pattern — WORKING AREA

Spotting the pattern is middling; a repeat miss can slip by unnoticed in the moment.

Diagnose honestly — WORKING AREA

Diagnosing honestly holds reasonably — you don't dodge the real fault when you check.

Ask for help — WORKING AREA

Asking for help is fine; you'll take a pointer rather than puzzle alone.

The soft spot is the first question — mental or technical: skip that and your one-cause instinct has nothing to work on, so the pattern goes unseen even though you'd diagnose it well.

PRIMARY ADVICE

After a miss, let the club rest, breathe, then ask one question only: was that my head or my swing? Decide before you move on.

Extra tip: *Keep a simple note of your three most common misses, so a repeat jumps out as a pattern instead of a one-off.*

MENTAL DRILL 1

On the course, after 5 missed shots, say aloud 'mental' or 'technical' and one cause — no more. Succeed if you commit to one each time. Once natural, add whether it matches a miss you've seen before this round.

MENTAL DRILL 2

After a round, review your card and tag each dropped shot with a single cause. Succeed if you find at least one repeating pattern across nine holes. Once easy, bring one pattern to your pro to confirm the fix.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"One cause, named, then I move."

STEP 8 OF 8 · POST

Transfer

Influenced by: Resilience 6.4/10 · Readiness — the foundation

5.0/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

"The miss keeps teaching, but you keep leaving the classroom."

> *On the 17th, you steered another pitch short — the third of the day after the 8th and the 15th — and still didn't make it your target for the next one. The lesson was sitting right there. You walked past it again.*

DEFINITION

You give meaning to what the Analysis showed and carry it forward — you store it as an insight for after the round. That way you get to know your strengths and weaknesses over time and know exactly what to work on.

When a round hands you a clear lesson, it rarely survives to the next tee or the next practice. The same fault keeps costing you because it never becomes an aim.

ON THE CARD · YOU LOSE THE SAME STROKES REPEATEDLY BECAUSE LAST ROUND'S LESSON NEVER FOLLOWED YOU TO THE NEXT.

You repeat last round's mistakes because the lesson never became your next target.

08

IF YOU DO JUST ONE THING **Turn today's most common miss into tomorrow's practice aim.**

Transfer is the difference between a golfer who repeats the lesson next round and one who repeats the mistake.

THE FIVE COMPONENTS OF TRANSFER

Misses teach you · START HERE — WORKING AREA

Letting misses teach you is the weakest link — the lesson rarely survives the walk to the next tee.

Look back — WORKING AREA

Looking back after a round happens somewhat, but not consistently enough to stick.

Turn miss to aim — WORKING AREA

Turning a miss into an aim is shaky — the fix seldom becomes a concrete target.

Find the fix — WORKING AREA

Finding the fix works reasonably once you sit down to look for it.

Keep one lesson — WORKING AREA

Keeping one lesson is middling; you often carry none rather than a single clear one.

It breaks at the first link: because the miss doesn't register as a teacher, it never becomes an aim, so even the fix you could find never makes it into your next round.

PRIMARY ADVICE

After the round, write one sentence: the single miss that cost you most and the one thing you'll practise because of it.

Extra tip: *Turn that lesson into a range task before your next round, so the fix is grooved before trouble shows up.*

MENTAL DRILL 1

After a round, pick 1 recurring miss and set it as your only range focus next session. Succeed if you spend the whole warm-up on it. Once habitual, carry that single aim onto the first hole of your next round.

MENTAL DRILL 2

Keep a one-line note after 3 rounds; before round four, read all three and name the lesson that repeats. Succeed if you find a common thread. Once clear, make that thread the one thing you fix this month.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"This miss is tomorrow's practice aim."

PART 2 · CONTINUED

The four influencing factors

You have now seen your eight steps — the mental routine itself. But how well that routine holds up depends on four factors around it, in shot order: how you weigh **risk** before the shot, how **pressure** loads your swing, how quickly you **bounce back** after the shot, and how **ready** you are — the game you have available today.

They are not steps, but the conditions that decide whether the routine holds when it gets tense. We look at each factor through the same four lenses: Knowledge (what do you know?), Context (what is true here?), Dialogue (say the shot) and Self (are you ready to hit it?). Four factors times four lenses: sixteen sub-factors.

INFLUENCING FACTOR 1 OF 4

Risk appetite

Pre-shot: club, target, line and miss

5.2/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *Par 5, second shot from a decent lie. The green sits behind water, and you reach for the 3-wood because the group is watching. You never checked the carry number first.*

WHAT THIS FACTOR IS

Risk appetite sets the shot before commitment begins: which club, which target, which line and which miss you accept. It is neither courage nor caution. With a poor risk call the atmosphere decides — mood, ego or another player — and the numbers are guessed or ignored. With a good risk call the facts decide: a known carry, a clear target and an acceptable miss, and then full commitment. Judge the decision separately from the result.

Knowledge sets odds · context sets exposure · dialogue states reasons · self carries consequences

A 5.2 puts your risk appetite squarely in work-territory, Alex. On good days the facts lead; on others the mood, the ego or the group decides for you. The ingredients are there, but they are not yet reliable enough to call the shot the same way every time.

HOW THIS HITS YOUR ROUTINE

Primarily in the pre-shot, in Focus and Concentration: club, target, line and miss. A good pre-shot produces a target that is specific, reachable and in line with your form. Skewed by risk appetite, the choice turns too aggressive or too cautious — and that happens before the swing, not inside it. In the swing it asks for commitment to the chosen shot; after the shot, for reviewing the decision, not the score.

> *Shaky shot decisions cost you two or three avoidable bogeys a round.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a playing partner before a risky carry: do they check a number and state a target, or just pull a club and swing?

IF YOU DO JUST ONE THING Let the facts pick the shot, then commit without looking back.

THE FOUR SUB-FACTORS OF RISK APPETITE

KNOWLEDGE **Calibration** · START HERE — WORKING AREA

At 4.3, your risk profile rarely matches your true dispersion yet.

CONTEXT **Exposure** — WORKING AREA

At 5.5, you read lie and trouble reasonably, but not every time.

DIALOGUE **Rationale** — WORKING AREA

At 4.9, your reasoning behind a shot is often half-formed.

SELF **Tolerance** — WORKING AREA

At 6.1, you genuinely accept the chosen risk fairly well.

PRIMARY ADVICE

Before every full shot, name three things aloud: carry number, target, acceptable miss. Then commit, whatever the outcome.

Extra tip: *After the round, grade five decisions as good or poor — separate from the result. You will spot your mood-driven calls fast.*

DRILL 1 · ON THE COURSE

On the range, play nine 'decision balls'. Before each, state club, target and your accepted miss out loud. Score the decision, not where the ball lands.

DRILL 2 · AT HOME

At home, list three holes where you usually over-reach. For each, write your realistic play based on your true dispersion, not your best-ever shot.

OBSERVATION POINT · CALIBRATION — *"Play your percentage."*

Watch for: Chooses from memory or best-case ability; no reference to stock dispersion or actual percentages.

Ask: What percentage shot is this for you? **Probe:** What evidence from practice or recent rounds supports that?

KEY LINE FOR THIS FACTOR

"Decide on the carry number, not on who is watching."

INFLUENCING FACTOR 2 OF 4

Pressure

Swing: tension, tempo and freedom

4.6/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *Standing on the 18th tee, one over your usual front nine, you feel the grip tighten and the tee shot gets quick. The swing speeds up and the ball leaks right into trouble.*

WHAT THIS FACTOR IS

Pressure makes the shot feel bigger than it is. It loads the routine — especially attention, tension and commitment — and is felt most in the swing: rushing, steering, a tighter grip, a shorter breath. Pressure can come from outside (a match, the cut, the final hole) or be added by yourself (the score, fear of the miss, wanting to prove something). The routine stays the same; only the load increases.

Knowledge locates the limit · context supplies load · dialogue frames meaning · self registers activation

A 4.6 tells me pressure still loads your swing more than you want, Alex. In the moments that matter, tempo shortens and the grip grabs. It is not a flaw — it is a pattern you can learn to spot early and manage. Small, repeatable habits will move this number.

HOW THIS HITS YOUR ROUTINE

Primarily in the swing: grip, breath, tempo and freedom. Conviction loses its ease and Trust is the most pressure-sensitive step of all — the urge to steer IS a pressure response. Pressure can already build in the pre-shot (outcome thinking, bodily tension); after the shot it asks you to keep the result in proportion.

> *Tight, rushed swings under pressure turn safe pars into doubles.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a partner on a demanding shot: does their routine stay the same length, or does the whole thing speed up when the moment grows?

IF YOU DO JUST ONE THING One breath out, one cue, then swing at your own tempo.

THE FOUR SUB-FACTORS OF PRESSURE

KNOWLEDGE Threshold — WORKING AREA

At 5.5, you half-know where pressure starts to shift your tempo.

CONTEXT Demand · START HERE — GROWTH AREA

At 3.7, you often misjudge what the moment actually demands.

DIALOGUE Narrative — WORKING AREA

At 4.9, your inner dialogue enlarges the moment as often as it steadies it.

SELF Arousal — WORKING AREA

At 4.3, your activation under execution tips past a usable level.

PRIMARY ADVICE

On any shot that feels big, take one slow breath out before you set the grip. That resets tempo before the backswing starts.

Extra tip: *Give yourself one short execution cue — 'smooth tempo' — and repeat only that. It leaves no room for the outcome story.*

DRILL 1 · ON THE COURSE

On the range, hit five balls at 80% effort, counting your tempo to yourself. Lock that feel before adding any target pressure.

DRILL 2 · AT HOME

At home, picture your three toughest moments on the course. For each, rehearse one breath and one cue until it feels automatic.

OBSERVATION POINT · DEMAND — *"Read the stakes."*

Watch for: Treats every shot as equally important — or inflates the real score, format or consequence.

Ask: What does this shot actually require? **Probe:** Which consequence is real, and which is added?

KEY LINE FOR THIS FACTOR

"The shot never got bigger — only the weight you added did."

INFLUENCING FACTOR 3 OF 4

Resilience

Post-shot: recover, reset and learn

6.4/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *You three-putt the 7th for bogey. On the 8th tee, the irritation is still there, your tempo is quick, and you pull the tee shot before fully settling. The last hole played the next one.*

WHAT THIS FACTOR IS

Resilience gets you to the next shot. It ends the carryover from the last shot and frees your attention for the next routine. As long as the previous shot is still playing — in your emotion, your tempo or your decisions — the reset is not finished. The reset is complete when you are available again for the shot in front of you.

Knowledge tracks the pattern · context selects the response · dialogue turns attention · self regains state

A 6.4 is a real strength starting to form, Alex. You recover from most setbacks and get back to the shot in front of you more often than not. The reset works; now it is about making it faster and more deliberate so one miss never becomes three.

HOW THIS HITS YOUR ROUTINE

Primarily in the post-shot: Evaluation keeps emotion calibrated, Acceptance closes the shot, Analysis turns it into information and Transfer carries one lesson forward. But carryover can also enter the next plan and disturb the next swing.

> *Clean resets keep one bad hole from becoming a bad stretch.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a partner's words after a missed putt: do they name what's next out loud, or keep replaying the one that just slipped by?

IF YOU DO JUST ONE THING Close the last shot in words, then turn fully to the next.

THE FOUR SUB-FACTORS OF RESILIENCE

KNOWLEDGE **Trajectory** — STRENGTH

At 7.3, you know your recovery pattern and what shortens it.

CONTEXT **Agility** — WORKING AREA

At 6.7, you adapt your recovery to what the round needs well.

DIALOGUE **Reorientation** · START HERE — WORKING AREA

At 5.5, your verbal turning point lands sometimes, not reliably.

SELF **Elasticity** — WORKING AREA

At 6.1, your body and attention return to a playable state soundly.

PRIMARY ADVICE

Give each miss a fixed closing line — 'that's done, next one' — spoken before you leave the previous spot.

Extra tip: *Use the walk to the next shot for recovery, then arrive fully present. Separate the emotion from the plan.*

DRILL 1 · ON THE COURSE

On the course, after any bad shot, name one neutral fact about what's next (lie, distance, target) before you move. It redirects attention forward.

DRILL 2 · AT HOME

At home, recall a round where one miss snowballed. Write the exact moment you could have closed it, and the words you'd use now.

OBSERVATION POINT · REORIENTATION — *"Name the next task."*

Watch for: Keeps talking about the previous shot or cannot formulate one clear next task.
Ask: What matters now? **Probe:** Can you say the next job in one sentence?

KEY LINE FOR THIS FACTOR

"The last shot is information; the next shot is where you live."

INFLUENCING FACTOR 4 OF 4

Readiness

Whole routine: the game available today

6.0/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *On the first tee you planned to work a gentle fade all day, but the warm-up showed a pull-draw. You ignore it and aim for the fade anyway — and the ball keeps running left.*

WHAT THIS FACTOR IS

Readiness is the game available today. It matches your plan to the body, swing, numbers and equipment actually present. Not ready means the plan asks for a shot you cannot reliably produce today. Ready means you can stand over the ball and execute what has actually been prepared. Play the game you brought to the first tee.

Knowledge builds the base · context tests fit · dialogue formulates the plan · self provides presence

A 6.0 says you mostly play the game you brought, Alex, but not always. Your preparation and your read of the day are solid, yet turning that read into a clear plan sometimes slips. When your plan matches today's swing, your scoring holds up well.

HOW THIS HITS YOUR ROUTINE

Readiness runs through the whole routine: an available body, numbers and shot in the pre-shot; an available swing and trust in the swing; and available attention to learn in the post-shot.

> *A plan that fits today's swing turns loose shots into fairways.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a partner after warm-up: do they put the day's swing into a clear plan, or step up still deciding what they're trying to do?

IF YOU DO JUST ONE THING Read today's game honestly, then turn it into one clear plan.

THE FOUR SUB-FACTORS OF READINESS

KNOWLEDGE **Foundation** — WORKING AREA

At 6.9, your preparation and verified patterns give you a solid base.

CONTEXT **Fit** — WORKING AREA

At 6.3, you adapt your game to the day's conditions fairly well.

DIALOGUE **Formulation** · START HERE — WORKING AREA

At 5.1, you read your readiness but struggle to make it a clear plan.

SELF **Presence** — WORKING AREA

At 5.7, you arrive present for the shot more often than not.

PRIMARY ADVICE

After warm-up, name the shot you actually have today in one sentence. Build your plan around that, not your ideal game.

Extra tip: *On the first tee, state your one clear intention out loud. A vague read becomes a usable instruction when you say it plainly.*

DRILL 1 · ON THE COURSE

On the range, finish warm-up by hitting your three go-to clubs and noting the real ball flight. Write one sentence: 'Today I have ___.'

DRILL 2 · AT HOME

At home the night before, run a quick check: sleep, body, schedule. Set one realistic scoring intention that matches what you'll actually bring.

OBSERVATION POINT · FORMULATION — *"Call today's game."*

Watch for: Cannot diagnose present readiness or state one plan that fits current capacity and conditions.

Ask: What game have you brought today? **Probe:** Say one plan that fits it.

KEY LINE FOR THIS FACTOR

"Play the game you brought to the first tee, not yesterday's."

ONE EXTRA INTERVENTION

Learning by observing

With each of your four factors comes an **observation point**. That is no side note — it is an intervention in itself. Your sharpest insight into your own mental game often comes not from looking inward, but from *someone else* watching.

When you deliberately watch how a playing partner handles pressure, a missed putt, a risky decision, two things happen at once. You see a pattern you do not spot so easily in yourself — the tension in the shoulders on the first tee, the tempo that changes after a bad shot, the club picked too quickly. And right at that moment you become more aware of your own routine and your own factors. Observing makes the abstract concrete.

> *The beauty is: it costs you nothing extra. You already play in company. By watching one thing in someone else for one round at a time, you build an eye for the mental game — which you then turn on yourself. What you learn to spot in others, you recognise in yourself.*

HOW TO GO ABOUT IT

Pick one factor per round. In yourself or in one playing partner, watch the observation point that belongs to it. Fact first — what a camera would capture — and only then the meaning. Wait for three comparable moments before you call it a pattern. After the round, ask yourself: what did I see, and did I recognise it in myself too?

FINALLY

This is *yours now*

Alex, you came into this already knowing how to read a golf course — that was never in doubt. What you can see now is the one thing standing between the player who plans every shot and the player who plays every shot he sees. That's not a weakness to fear; it's the most exciting kind of gap, because it's small, specific, and entirely yours to close.

WANT TO GO FURTHER?

The next step *in your story*

Reading a report changes nothing on the course yet — you know that. The real gain, and the real fun, only start when you pick one thing and work on it. And you do not have to do that alone.

For that, MentalRoutine builds from exactly this profile a personal **Training report**: a personal workbook of around ten pages, tuned to your scores and your level of play. No generic tips, but exercises, mantras and stories that fit where you stand now — the logical next step after what you have just read about yourself.

YOUR PERSONAL ADVICE

Where you are best *placed to begin*

We laid your full profile side by side: your eight steps with their forty components, and your four influencing factors. Below are the three topics where training pays off most for you now — your two biggest opportunities and your strongest step. The same three are waiting as advice in your portal.

YOUR THREE RECOMMENDED TOPICS

Each its own training report — together exactly the three included with your assessment.

1. Conviction
start with: Believe in it

IMPROVE
score 3.8/10

2. Transfer
start with: Misses teach you

IMPROVE
score 5.0/10

3. Focus
start with: Pick a target

LEVERAGE
score 7.2/10

OR CHOOSE AN INFLUENCING FACTOR

You can also spend one of your three reports on a factor. For you, **Pressure** (4.6/10) is the obvious choice — start there with **Demand** — *"Read the stakes."*

HOW TO START

Start with the first topic: that is where the most is to be gained. Rather go another way? In your portal you choose freely from all twelve topics.

Your training reports are waiting in your portal — that is where you choose what to pick up first.

Go to the portal →

AFTER THIS REPORT

How your *training works*

HOW A TRAINING REPORT WORKS

A STEP OF YOUR ROUTINE

Trains one of your eight steps through five angles, tuned to your score on each component. Choose this if you want to work on a part of your routine.

AN INFLUENCING FACTOR

Trains one of your four factors through the four lenses: knowledge, context, dialogue and self. Choose this if the terrain around your routine costs you most.

> Nothing extra to arrange: three training reports are included with your assessment, and you choose them yourself from all twelve topics — your eight steps and your four factors. Everything is ready in your portal, at your own pace.

TWO WAYS TO GROW

IMPROVE

With a lower score. The report motivates and builds: small, doable steps that make your weak spot stronger bit by bit. This is often the quickest gain.

LEVERAGE

With a high score. The report inspires: how do you use a strength you already have even more deliberately, so it wins you shots on the holes that count?

WHEN TO MEASURE AGAIN?

Give yourself 3 to 6 months to work with your training reports and the advice in this report, and make sure you really practise in that period — count on at least 6 to 10 rounds or 8 to 12 practice sessions where you work on it deliberately. Then take the MentalRoutine Assessment again. Where you truly changed something, you will see it as a clear shift in your profile — not in a single decimal, but in the direction a whole step moves.

"The greens are not going anywhere. The game will always be here for you. What you choose to do with what you've learned — that's entirely yours."

— MENTALROUTINE · WWW.MENTALROUTINE.COM
