READING GUIDE

This report — *how to read it*

1 **Start here: Mental Index & Archetype** (next page)
Your overall score and archetype — a 2 minute read, direct insight into your mental profile.

2 **Then go to Priorities + Action plan** (page 11–12)
Three concrete priorities and an action plan for before, during and after the round. Cut out the tear-off card — take it to the course (in your bag or to a partner).

3 **Use Part 2 as a reference or with your coach**
Per step a scene on the course you will recognise, your five components and concrete drills — then your four factors with their lenses. Ideal to share with a teaching professional or sport psychologist before a session.

The holes and moments we describe are recognisable example situations based on your answers — not rounds we watched, but a mirror of how you describe yourself on the course.

YOUR 8 STEPS — QUICK GUIDE

Focus ★ Strongest step	8.1/10
Concentration	7.6/10
Conviction	7.0/10
Trust	6.2/10
Evaluation	7.3/10
Acceptance ▼ Biggest opportunity	4.4/10
Analysis	6.9/10
Transfer	5.2/10

HOW DO YOU READ A SCORE?

7.0–10	**Strength** — build on this; use it as an anchor under pressure.
4.0–6.9	**Working area** — functional but inconsistent; focused attention pays off.
0–3.9	**Growth area** — most to be gained here; this step costs you energy now.

'Strongest step' and 'biggest opportunity' compare your steps with each other; strength, working area and growth area say where a score sits on the scale.

WHERE YOUR MENTAL INDEX (6.6) SITS

0–3.9 · Growth area Working area 7.0–10 · Strength

MENTAL INDEX & ARCHETYPE

MENTAL INDEX

The higher your Mental Index, the stronger you experience your own mental game

A 6.6 tells me your game is driven by a sharp, prepared mind that gets you into good positions again and again.

YOUR ARCHETYPE

The Strategist

You win holes before you swing. Your plan is your edge.

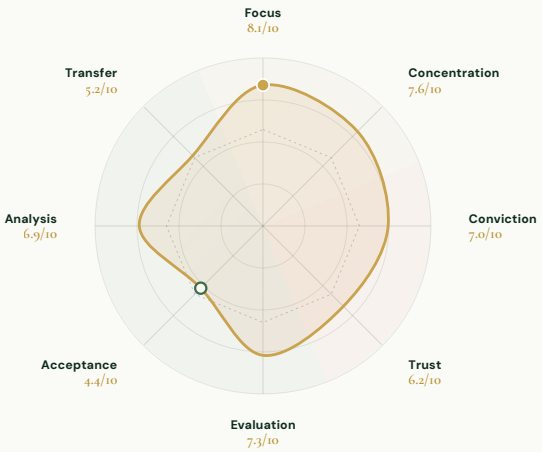

"Golf is a game that is played on a five-inch course — the distance between your ears."

— BOBBY JONES

MENTAL INDEX

The further a point sits from the centre, the stronger that step. Your silhouette shows at a glance where your foundation lies — and where the most is to be gained.

INTRODUCTION

Welcome to *your report*

FOR YOU

This report isn't a verdict on your game. It's a mirror held up to how you think between the ropes. Nothing here is a grade — it's a closer look at the golfer you already are. Read it as a conversation, not a scorecard.

WHAT YOUR SILHOUETTE SAYS

You arrive at the ball with a plan sharper than most players twice your ability. The front end of your game — reading, choosing, committing — is where you live, and it's beautiful to watch work. But the same intensity that makes your preparation so clean makes a bad result stick to you longer than it should. The strongest part of your game and the part that costs you the most are closer cousins than you'd think.

Where the shape bulges outward lies your foundation. Where it caves in lies the most gain. Part 2 tells you per step what to do about it.

"If I commit to the shot and trust my routine, the result takes care of itself."

— ANNIKA SÖRENSTAM

ABOUT THIS REPORT

How does *the MentalRoutine work?*

THE MODEL AND THIS REPORT

The model is built on sport-psychology research — how you steer attention, handle tension and stay motivated — and tested on more than 1,000 golfers, from handicap 0 to 36+. The next page shows at a glance how it fits together: three phases, eight steps with five components each, and four influencing factors with four lenses each. The report has two parts. Part 1 is your portrait: what your scores say, where your strength lies and where you start. Part 2 is your reference: every step and then every factor worked out in full, with exercises.

HOW YOUR SCORES ARE BUILT

You answer a series of questions about your routine and the factors around it — 20 to 25 minutes in all. Per step we measure five components (forty in all) and per influencing factor four sub-factors (sixteen in all). Every score is a mark from 0 to 10, based on the maximum attainable score on that component — so you see at a glance where you are strong and where the most room lies. The Mental Index (0–10) sums your eight steps in one number.

Important: these scores measure how you experience your own game — not an outside, measured performance. Read a 10 as "the top of the scale", not as perfection. Because it reflects your own experience, the scores point you straight to where it chafes for you.

THIS REPORT IS UNIQUE TO YOUR PROFILE

The course scenes, comparisons and advice in this report are not generic — they are built from your own answers and handicap (6.3). It works for golfers at every level, from handicap 0 to 36+. There is no "right" or "wrong" mental profile. This report helps you understand yourself better; it is not a medical or psychological diagnosis. Struggling with severe tension or stress around your game? Speak to a sport psychologist.

THE MODEL

One routine. Eight steps. *Every shot.*

Not eight separate parts, but one routine you run in the same order on every shot — and the terrain that routine has to get through. The shot routine tells you when something happens (before, during or after the shot), the mental routine what you do at that moment, and the influencing factors what makes it easier or harder.

PRE-SHOT		SWING		POST-SHOT			
1	2	3	4	5	6	7	8
Focus	Concentration	Conviction	Trust	Evaluation	Acceptance	Analysis	Transfer

Risk appetite 4.3
Interferes with your target and plan: the risk you accept before the shot.

Pressure 5.0
Interferes with conviction and a free swing: under real pressure your game falls back on what is ingrained.

Resilience 5.8
Interferes with processing after the shot — and decides whether a miss carries into the Focus of your next shot.

↻ *Step 8, Transfer, hands the next shot its Focus — that is how the loop closes.*

READINESS — THE FOUNDATION 7.4
Your capacity to run any of this at all: built over time, plus your state today. Readiness is not one point in the loop, but the ground under every step.

HOW TO USE THE MODEL — FOUR QUESTIONS FOR EVERY SHOT

1 · When?
THE SHOT ROUTINE
Before, during or after the shot: three phases.

2 · Which step?
THE MENTAL ROUTINE
Eight steps, each with five trainable components — forty in all.

3 · What was in play?
THE INFLUENCING FACTORS
Four factors, each seen through four lenses: knowledge, context, dialogue and self — sixteen in all.

4 · What now?
ONE ACTION
One exercise, cue or reset for the next comparable shot. You find them per step and per factor in Part 2.

Together 56 measurement points: 40 in your routine, 16 in the factors around it. Every piece of advice in this report works on one of them.

THE SHOTROUTINE

Pre-Shot · Swing · *Post-Shot*

Your anchor is the Pre-Shot — the ten seconds before you swing are the best ten seconds of your routine. The Swing holds up well; you mostly trust what you've picked. The break point sits after the ball flies, when a poor result lingers and the next tee doesn't start clean.

PRE-SHOT
Preparation
7.8/10

FOCUS
CONCENTRATION

You stand behind the ball, see the shot clearly, and know exactly what you want before you ever take your stance.

Influenced by: **Risk appetite** 4.3/10

SWING
Execution
6.6/10

CONVICTION
TRUST

You mostly let the swing go, but under real pressure your hands tighten and you start steering what you've already decided.

Influenced by: **Pressure** 5.0/10

POST-SHOT
Processing
6.0/10

EVALUATION
ACCEPTANCE
ANALYSIS
TRANSFER

You read your misses sharply, but you hold onto the bad ones far longer than a player of your standard should have to.

Influenced by: **Resilience** 5.8/10

Readiness 7.4/10 — the foundation under all three phases

ENERGY LEAK

The leak runs from your Swing into your Post-Shot — a good process produces a bad result, and the bad result won't leave.

PART 1 · THE BIG PICTURE

The Price Of Total Commitment

On the 2nd, a tight par-4, you stood behind the ball and saw the whole thing — the gap, the slope, the landing spot — then committed without a flicker of doubt. That same total commitment is why the 12th wrecked you, Chris. When you give yourself completely to a shot and it comes out poor, there's nothing left over to soften the blow — you don't miss halfway, so a miss never feels halfway.

> *You can't give yourself fully to a shot and then let the miss go gently.*

STRONGEST STEP

Focus

8.1/10

Use your Focus as the switch that starts every shot the same way, even when the scoreboard pulls at you. The holes others give away through vague aiming are exactly the ones your precise reading lets you steal.

BIGGEST OPPORTUNITY

Acceptance

4.4/10

"As full as I swung, I let go."

Say it on the 12th, walking off after a committed shot found trouble and the bad result wants to ride with you to the 13th tee.

YOUR NEXT STEPS

Three routes *forward*

ROUTE 01

More *enjoyment* in the game

Imagine the walk to the next tee after a flushed shot that found the bunker. Right now that walk is tense and quiet. The real reward of this work isn't a lower number — it's that the good holes stop getting ruined by the memory of one bad swing, and the round feels lighter from the 10th onward.

GIVE THESE STEPS PRIORITY

ACCEPTANCE TRANSFER TRUST

These three decide how heavy your round feels by the back nine. Soften how a miss lands and the whole walk between shots changes.

ROUTE 02

Better *performance*

For a 6.3, the scoring gains hide in the ten minutes after a double. Right now a bad hole bleeds into the next two. Clean up how you reset and recover, and your sharp pre-shot game finally gets to work on every hole instead of three out of five.

GIVE THESE STEPS PRIORITY

ACCEPTANCE TRUST TRANSFER

Your scores already prove the front end works. The strokes you're leaving out there are the ones that follow a miss, not the misses themselves.

ROUTE 03

Enjoyment & performance

The balanced road leans on what you already own. Keep your reading and commitment razor-sharp, then build the recovery that lets you use them on all eighteen. You get the best of both: a lighter round and a lower number from the same work.

GIVE THESE STEPS PRIORITY

ACCEPTANCE TRANSFER FOCUS

Pairing your strongest step with your weakest is the whole point of this report. Protect the strength, repair the drop-off, and let one feed the other.

PRIORITIES

Where to begin — *your focus*

LEVERAGE YOUR STRENGTHS

FOCUS · CONCENTRATION · EVALUATION

When a hole tightens, lean on what never leaves you: get behind the ball and build the picture before anything else. Your Focus is the one thing that holds when the scoreboard pulls at you — use it as the switch that starts every shot the same way.

HANDLING YOUR OPPORTUNITIES WELL

TRUST · TRANSFER · ACCEPTANCE

Don't try to fix all three at once — that's how you drown the thing that already works. Start with Acceptance alone, because it's the gate: until the last miss leaves your head, nothing else you learn gets through. Give it four weeks on its own before you add anything.

YOUR TOP 3 PRIORITIES NOW

1. Acceptance first — because a player who reads the course as well as you shouldn't be giving holes back while still fuming about the last one.
2. Transfer second — once a miss stops stinging, you can finally turn it into tomorrow's target instead of tonight's grudge.
3. Trust third — your committed decisions deserve a loose swing, especially on the short putts where your hands go quiet.

YOUR 4 WEEKS — STEP BY STEP

WEEK 1
Loosen your glove after every miss and take one slow breath.

WEEK 2
Add one calm, factual look at what the ball actually did.

WEEK 3
Commit harder to the decisive shot — pick and go.

WEEK 4
Blend all three into one smooth post-shot routine.

GETTING TO WORK

Your personal *action plan*

MEASURE IT ON THE COURSE — THIS ROUND

- ☐ Count how many times a bogey followed directly on another bogey across the round.
- ☐ Tally how often you reached the next tee still replaying the last shot.
- ☐ Note how many short putts you steered instead of releasing freely.

TEST THIS REPORT'S CORE YOURSELF

☐ For three rounds, after every miss tally whether it was a well-struck shot with bad luck or a miss you half-expected, and whether you were loose again within ten seconds. Does the first kind weigh heavier on you? Then the heart of this report holds.

Before

THE ROUND

- Decide before the round that one double won't define it.
- Pick one hole where you'll play bold instead of safe.
- Agree with yourself that misses get ten seconds, no more.

During

ON THE COURSE

- Loosen your glove after a bad shot before you walk.
- Take one slow breath between the miss and the next club.
- Say your target out loud before every tee shot.

After

REFLECTION

- Write down one shot you genuinely enjoyed today.
- Pick the single lesson worth keeping and leave the rest.
- Note one miss that was just bad luck, not bad golf.

TAKE THIS TO THE COURSE · PUT IT IN YOUR BAG

PRE-SHOT CUE	See the landing spot, then name it out loud.
RESET LINE	The ball's gone — my attention isn't.

YOUR PROMISE SHEET

Chris

Chris, from your answers one thing stands out immediately: you think your way around a course better than almost anyone at your level. You told me you see the shot, weigh it, and commit — and that you're hardest on yourself when a good plan produces a bad result. That honesty is exactly why your game has room to open up: the sharpness that makes your preparation so good is the same sharpness that keeps a miss in your head too long.

YOUR MAIN MANTRA — THE LINE FOR THIS ROUND

> *"As full as I swung, I let go."*

MentalRoutine Assessment · Chris · November 2, 2026

"The mind messes up more shots than the body."

— TOMMY BOLT

DEEP DIVE

Questions to *think about*

Write your first thoughts below. There are no right or wrong answers — only honest ones. You need not answer them straight away — feel free to come back later.

ON YOUR STRONGEST STEP — FOCUS

On which holes do you trust your reading so completely that you stop double-checking the obvious?

ON YOUR BIGGEST OPPORTUNITY — ACCEPTANCE

What would change in your back nine if a miss got ten seconds of your attention and not a hole?

OVERALL — YOUR COMPLETE PROFILE

Where in your round does the same intensity that makes you sharp start to weigh you down?

YOUR INTENTION FOR THE NEXT ROUND

Which single mental habit will you build in over the next four weeks? Describe when, how and what for.

PART 2 OF THE REPORT

Your Complete *Profile*

Per step and per factor — worked out in full

In this part each of your eight steps is worked out in full: a scene on the course you will recognise, your score, the five components read personally, concrete advice, two exercises and a mantra. Then come your four influencing factors, each with the four lenses. Use Part 2 as a reference — or share it with your coach.

THE EIGHT STEPS

1. Focus	8.1	**17**
2. Concentration	7.6	**19**
3. Conviction	7.0	**21**
4. Trust	6.2	**23**
5. Evaluation	7.3	**25**
6. Acceptance	4.4	**27**
7. Analysis	6.9	**29**
8. Transfer	5.2	**31**

THE FOUR FACTORS

Risk appetite	4.3	**34**
Pressure	5.0	**36**
Resilience	5.8	**38**
Readiness	7.4	**40**

FOR YOUR COACH — IN 90 SECONDS

BIGGEST GAIN
Biggest gain is teaching him to release a miss as completely as he commits to a shot — the back nine is where his strokes leak.

CORE DIAGNOSIS
His elite pre-shot clarity and poor acceptance are the same trait: total commitment. He reads causes sharply when he looks, but often judges before he's truly accepted the result, so emotion colours the diagnosis.

START QUESTION
"When a flushed shot gets an unlucky result, what exactly runs through your head on the walk to the next tee?"

Every step has its own story.
This one is yours.

STEP 1 OF 8 · PRE

Focus

Influenced by: Risk appetite 4.3/10 · Readiness — the foundation

8.1/10

STRENGTH ★ Strongest step

A STRONG SIDE OF YOUR GAME

"You read a hole the way others read a putt — fully, before committing."

> *On the 2nd, a tight par-4 into a crosswind, you got behind the ball and saw the exact gap — left of the fairway bunker, short of the slope. You picked a 3-wood over driver without a second thought and flushed it to the perfect spot. The hole was won before you swung.*

DEFINITION

You pick the target area, settle your club choice and see the ball flight before you swing. This includes course management: how do you play the hole strategically, in a way that suits your own game? Focus must be fully finished before you move on to concentration.

When you stand on a demanding tee, you don't guess — you build a clear picture and know exactly where the ball should finish. That clarity is the foundation your whole round is built on.

BLIND SPOT?

Late in a round, legs tired on the 16th, you can grab the first picture that feels good enough instead of the best one — the clarity turns into a shortcut. Worth checking once with your pro.

ON THE CARD · YOU GIVE YOURSELF THE BEST POSSIBLE SHOT BEFORE YOU EVER TAKE THE CLUB BACK.

You arrive at the ball already decided, which keeps your hands quiet and your tempo honest.

IF YOU DO JUST ONE THING **Name your landing spot out loud before every shot.**

Focus is the difference between aiming at a whole fairway and aiming at the single yard of grass you actually want the ball on.

THE FIVE COMPONENTS OF FOCUS

Pick a target — RELATIVE WEAKEST

You lock onto a precise target rather than a vague direction, and it shows in your lines.

See the shot — STRENGTH

Seeing the shot comes effortlessly — the flight is vivid in your head before you move.

Judge it honestly — STRENGTH

You judge your own capability honestly, so you rarely bite off a shot you can't hold.

Weigh the risk — STRENGTH

Weighing the risk is instinctive — you read trouble and reward in the same glance; this is your edge on the narrow holes.

Commit to it — STRENGTH

Once you've chosen, you're all-in on it, with no second-guessing before the swing.

It starts with a precise target: once you've locked that in, the picture, the honest read, and the risk weigh themselves — and commitment follows without a whisper of doubt.

PRIMARY ADVICE

Keep picking your landing spot out loud, especially on the holes where the scoreboard tempts you to aim at the whole fairway instead of a yard of it.

Extra tip: *On the last three holes, deliberately take one extra second behind the ball — that's exactly where your sharp picture starts cutting corners.*

MENTAL DRILL 1

On the back nine of a tired round, name your exact landing spot out loud on all nine tee shots. You succeed if you did it on 8 of 9 without shortcutting. Once that holds, do it with a partner watching you.

MENTAL DRILL 2

On the range, hit 10 shots where you first describe the shot in one sentence, then swing. You succeed when every ball gets its sentence first. Once easy, shrink the target to a single flag on the far fence.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I pick the yard, not the fairway."

STEP 2 OF 8 · PRE

Concentration

Influenced by: Risk appetite 4.3/10 · Readiness — the foundation

7.6/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"You shut the door on everything that isn't the shot in front of you."

> *On the 4th, with a group pushing up behind you and chatter near the tee, you stepped back, let it all fade, and stayed with your routine. You picked your line, locked onto the ball, and striped it down the middle as if the noise never existed. The distraction never touched the shot.*

DEFINITION

You put all your attention on that one task — the ball to the target area — and shut out everything that is irrelevant right now: the last shot, the state of the match, outside noise and inner doubt.

When something tries to pull your attention — a slow group, a tricky lie, a scoreboard — you park it and stay with the ball. You reset cleanly and rarely let the previous shot bleed into this one.

BLIND SPOT?

On a long round in heat, your eye on the ball can drift a fraction on the closing holes — you start seeing the target instead of the ball. One check with your pro on your closing-hole gaze is worth it.

ON THE CARD · YOU KEEP CLEAN SHOTS CLEAN BECAUSE YOU NEVER DRAG THE LAST DISTRACTION INTO THE NEXT SWING.

You keep your head in the ten seconds that matter and let the rest of the course wait.

02

IF YOU DO JUST ONE THING **Fix your eyes on one dimple before you start back.**

Concentration is the difference between hearing the group behind you and letting them into your backswing.

THE FIVE COMPONENTS OF CONCENTRATION

Stay with it — RELATIVE WEAKEST

Staying with it comes naturally — your attention holds through the whole shot, not just the setup.

Park distractions — STRENGTH

Parking distractions is a real strength; noise and movement slide off you before the swing.

Eye on ball — STRENGTH

Your eye stays on the ball right through impact, which keeps your strike clean under pressure.

Reset — STRENGTH

Resetting between shots is smooth — you arrive at the next ball fresh, not carrying the last one.

Relax between shots — STRENGTH

Relaxing between shots works well for you, so you reach each ball with energy to spare.

Four of these run almost automatically; it's staying with the shot start-to-finish that occasionally slips, and when it does, your clean reset is what saves the hole.

PRIMARY ADVICE

Keep your pre-shot length identical whether you're relaxed or under pressure — same beats, same look, same trigger, every time.

Extra tip: *When a group pushes behind you, deliberately slow one beat rather than rushing — your concentration is strongest when you refuse to be hurried.*

MENTAL DRILL 1

Play 3 holes with a group deliberately crowding your tempo and keep your routine exactly the same length. You succeed if all three tee shots felt unhurried. Once that holds, do it in a club medal.

MENTAL DRILL 2

On the range, hit 10 balls where you stare at one dimple until you start back. You succeed when you never swing without that fixed point. Once easy, transfer it to every putt inside six feet.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"This shot, nothing else exists."

STEP 3 OF 8 · SWING

Conviction

Influenced by: Pressure 5.0/10 · Readiness — the foundation

7.0/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"You believe in your plan — until the hole gets big enough to make you flinch."

> *On the 6th, a reachable par-5 with water guarding the green, the aggressive line was there — but you felt the pull to lay up. You chose the safe wedge-approach instead of the shot you'd actually planned. It was fine, but you walked off knowing you'd backed off, not committed.*

DEFINITION

You are convinced you will hit the shot exactly as intended. You want it, you can do it, you do it. Doubt is useless and has to be switched off completely, because without conviction there is no good performance.

On most shots you fully back your decision and swing without hesitation. But when a hole really matters, you sometimes trade the shot you planned for the one that feels safer — and you feel the difference.

BLIND SPOT?

Een score dit hoog is een kracht — maar toets hem één keer bij je pro: voelt jouw conviction op de baan even sterk als het op papier scoort?

ON THE CARD · YOU LEAVE BIRDIE CHANCES ON THE COURSE WHEN YOU SWAP YOUR REAL PLAN FOR THE SAFE ONE.

You mostly swing with belief, but on the deciding shot a flicker of doubt can soften your choice.

IF YOU DO JUST ONE THING **Choose the club your plan picked, then grip it and go.**

Conviction is the difference between the shot you planned at the tee and the safer one you talk yourself into at the ball.

THE FIVE COMPONENTS OF CONVICTION

Believe in it · START HERE — WORKING AREA

Believing in the shot works most of the time, but wavers when the hole carries real weight.

Fully commit — STRENGTH

Full commitment to the swing is a strength — once you go, you mostly go completely.

Fire yourself up — WORKING AREA

Firing yourself up is inconsistent; on the big shots the energy doesn't always rise to meet them.

Take it on — STRENGTH

Taking it on comes fairly readily — you'll back the aggressive line more often than you give yourself credit for.

Back yourself — STRENGTH

Backing yourself holds up decently, though it dips exactly when the moment gets largest.

It hinges on belief: when that dips on the big hole, the fire-up fades with it, and even your solid commitment can't fully carry a shot you half-doubted.

PRIMARY ADVICE

On the one shot per round that scares you, name the aggressive line out loud and commit to it before doubt gets a word in.

Extra tip: *When you catch yourself reaching for the safe club, pause one beat and ask whether it's the plan talking or the fear — then pick and go.*

MENTAL DRILL 1

Pick 3 holes per round where you'll play the bold shot you planned, no backing off. You succeed if you committed to all three, result aside. Once that's comfortable, add a fourth on the hardest hole.

MENTAL DRILL 2

On the range, before each of 10 shots, say 'this one, all in' out loud and swing fully. You succeed when every swing felt committed, not steered. Once easy, take the phrase to your next pressure tee shot.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"This is the shot — I'm all in."

STEP 4 OF 8 · SWING

Trust

Influenced by: Pressure 5.0/10 · Readiness — the foundation

6.2/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You pick the right shot, then your hands try to help it along."

> *On the 8th, a par-3 to a tucked pin, you'd picked your club and your line cleanly. But stepping in, you felt your hands take over and start guiding the swing toward the flag. The ball came out held-off and bailed right, long of safe.*

DEFINITION

You hit the shot with full commitment: no hesitation, nothing held back. This is 'stand there and do it'. The prep is done; now the loyal execution, with the right balance of power and calm.

When you let go, you swing freely and the strike is clean. But under pressure, especially on the short putts, your hands tighten and you start steering instead of releasing — and the result goes soft.

ON THE CARD · YOU LOSE GOOD SHOTS TO A LATE GRAB WHEN YOUR HANDS TRY TO SAVE WHAT YOU'D ALREADY PLANNED WELL.

You swing your best when you let the plan run and keep your hands out of it.

04

IF YOU DO JUST ONE THING **Pick it, then swing it like you already trust it.**

Trust is the difference between swinging at your target and steering the ball toward it.

THE FIVE COMPONENTS OF TRUST

Don't steer · START HERE — WORKING AREA

Not steering is the piece that slips most — under pressure your hands reach in to guide the ball.

No swing thoughts — WORKING AREA

Quieting swing thoughts works reasonably; you mostly swing on feel rather than a checklist.

Hit your plan — WORKING AREA

Hitting your plan is inconsistent — the shot you pick and the shot you make don't always match.

Stay loose — WORKING AREA

Staying loose holds up fairly well, though tension creeps into your hands on the shots that matter.

Practise on purpose — WORKING AREA

Practising on purpose is developing — your range work isn't yet fully pointed at this release.

It bottlenecks on one thing: the moment you steer, your plan and your swing split, your hands tighten, and even a loose setup can't rescue a guided stroke.

PRIMARY ADVICE

On short putts, let the stroke go the same length back and through — the moment you try to guide the pace, you've stopped trusting it.

Extra tip: *Make one smooth practice swing at full speed, then step in and copy it exactly — no corrections, no half measures.*

MENTAL DRILL 1

On the course, hit 5 approaches where you refuse any mid-swing correction, come what may. You succeed if all five felt released, not steered. Once that holds, take the same freedom to your short putts.

MENTAL DRILL 2

On the putting green, roll 10 four-footers with your eyes on the hole, not the ball. You succeed when the stroke stays loose and even. Once easy, do it on the first testing putt of your next round.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I swing it, I don't steer it."

STEP 5 OF 8 · POST

Evaluation

Influenced by: Resilience 5.8/10 · Readiness — the foundation

7·3/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"You see what the ball actually did, not what your mood says it did."

> *On the 10th, after an approach that pulled left of the green, you watched the ball the whole way and clocked exactly what happened — pull, not a fat strike, finishing pin-high left. You didn't panic or inflate it. You read the chip, saw it was a straightforward up-and-down, and got it close.*

DEFINITION

You note objectively what the ball did — strike feel, sound, direction, ball flight, distance, where it finished, divot — and match it against your Focus plan. This sets up the Analysis.

When a shot misses, you read it cleanly — direction, distance, cause — instead of exaggerating it. That honest read lets you choose the right recovery instead of compounding the error.

BLIND SPOT?

When a result stings — a flushed shot into a bunker — you sometimes judge the miss accurately but skip actually watching the ball, reacting before you've really looked. One check with your pro on that order is worth it.

ON THE CARD · YOU CHOOSE THE RIGHT RECOVERY BECAUSE YOU SEE THE MISS FOR WHAT IT REALLY WAS.

You keep a clear head after a miss, so your next shot is based on facts, not frustration.

IF YOU DO JUST ONE THING **Watch every shot land before you react to it.**

Evaluation is the difference between 'that putt was terrible' and 'that putt rolled a foot right, slightly too firm'.

THE FIVE COMPONENTS OF EVALUATION

Watch closely · START HERE — WORKING AREA

Watching closely is solid, though a stinging result can pull your eyes off the ball before it lands.

Judge the miss — STRENGTH

Judging the miss is a genuine strength — you name direction and distance without blowing it up.

Stay level-headed — STRENGTH

Staying level-headed holds well; you rarely let one bad shot colour the whole read.

Check your plan — STRENGTH

Checking against your plan works reliably — you ask whether the miss came from the plan or the swing.

Fixed order — STRENGTH

Working in a fixed order is dependable, so your post-shot read rarely skips a step.

It starts with watching: when a sting pulls your eyes early, you register the ball late, which nudges you to overstate the miss before you ever check it against your plan.

PRIMARY ADVICE

Keep watching every ball all the way down, then say one factual sentence about what it did before any feeling gets in.

Extra tip: *After a stinging miss, deliberately describe the flight out loud first — direction and distance — before you let yourself have an opinion about it.*

MENTAL DRILL 1

For 5 misses in a round, say the fact out loud before any reaction: 'pulled, pin-high left'. You succeed when the fact comes first every time. Once that holds, do it after your best shots too.

MENTAL DRILL 2

On the range, hit 10 shots and grade each flight in one neutral sentence, no judgement words. You succeed when none of the ten carry an emotion. Once easy, take it to the first tee.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I read what happened, not how it felt."

STEP 6 OF 8 · POST

Acceptance

Influenced by: Resilience 5.8/10 · Readiness — the foundation

4.4/10

WORKING AREA

▼ Biggest opportunity

A WORKABLE BASE TO BUILD ON

"You give everything to a shot, which is exactly why a miss won't leave you."

> *On the 12th, you flushed a drive that took a hard bounce into the trees — perfect swing, unlucky result. The injustice of it stuck. You stood over the next shot still arguing with the bounce, swung half-interested, and turned one piece of bad luck into a double.*

DEFINITION

You accept the outcome of your shot, good or bad. It happened; you cannot change it any more. Emotions are allowed, but they have to be dealt with before you move to the next shot.

When a good swing gets a bad result, you carry it to the next tee and the shot after suffers for it. That lingering is where single holes quietly become two-hole stretches on your card.

ON THE CARD · YOU HAND BACK HOLES YOU NEVER HAD TO LOSE WHILE STILL FIGHTING THE SHOT YOU CAN'T CHANGE.

Your round feels heaviest right here — a miss rides with you to the next tee instead of staying behind.

IF YOU DO JUST ONE THING **Loosen your glove after every miss, then breathe out slowly.**

Acceptance is the difference between a golfer who drops one shot to a bad bounce and one who drops three.

THE FIVE COMPONENTS OF ACCEPTANCE

Let go · START HERE — GROWTH AREA

Letting go is the hardest part for you — a miss clings on and follows you to the next ball.

Be kind — WORKING AREA

Being kind to yourself after a mistake doesn't come easily; you're your own toughest critic.

Keep perspective — WORKING AREA

Keeping perspective slips when it stings — one bad bounce can feel like the whole round turning.

Play on — WORKING AREA

Playing on is a struggle; the next shot often carries the weight of the last one.

Enjoy good shots — WORKING AREA

Enjoying good shots gets crowded out — the misses take up more room than the flushed ones.

It all starts with letting go: when a miss won't leave, the self-criticism grows, perspective shrinks, and the next shot is swung by someone still fighting the last one.

PRIMARY ADVICE

After a miss, first strip your glove loose and let your shoulders drop, then breathe out long and slow — settle the body before you ask the mind to move on.

Extra tip: *Give a bad result exactly ten seconds, then physically turn and walk — movement breaks the loop faster than willpower does.*

MENTAL DRILL 1

On the range, hit 10 shots and after every poor one loosen your glove and exhale slowly within 3 seconds. You succeed if you do it 8 of 10 times. Once that holds, take it to your first three misses on the course.

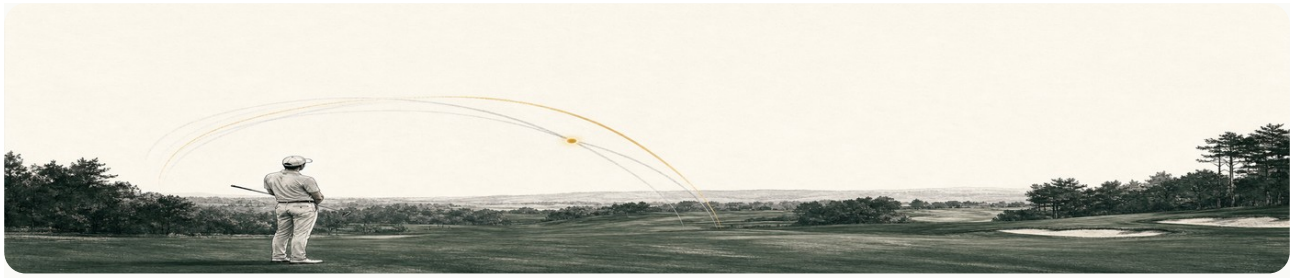

MENTAL DRILL 2

In a full round, give every bad result a strict ten-count, then step toward the next shot on the ten. You succeed if no miss outlasts the count. Once easy, shrink it to a five-count on the back nine.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Ten seconds, then I'm walking."

STEP 7 OF 8 · POST

Analysis

Influenced by: Resilience 5.8/10 · Readiness — the foundation

6.9/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You find the one real cause instead of rebuilding your swing over one bad shot."

> *On the 15th, after a wayward iron, you paused and asked the right question — was that mental or technical? You landed on it quickly: a rushed tempo from carrying the 12th with you, not a swing flaw. That honest, single cause let you reset your timing on the next tee.*

DEFINITION

You compare the shot you hit with the shot you had in mind during Focus. You look for the main cause of any difference — mental as well as technical — and draw one clear conclusion.

When something goes wrong, you mostly diagnose it honestly and settle on one cause rather than five. The catch is you sometimes analyse before you've truly accepted the shot, so emotion colours the diagnosis.

> ON THE CARD · YOU AVOID CHASING PHANTOM SWING FAULTS BECAUSE YOU NAME THE REAL REASON, NOT FIVE FAKE ONES.
>
> *You keep your head quiet after a round because you know the one reason, not a tangle of them.*

07

IF YOU DO JUST ONE THING **Ask one question after a miss: mental or technical?**

Analysis is the difference between 'my swing's gone' and 'I rushed that one because I was still annoyed'.

THE FIVE COMPONENTS OF ANALYSIS

Mental or technical? · START HERE — WORKING AREA

Separating mental from technical mostly works, though a still-raw emotion can push you toward blaming the swing.

One cause — STRENGTH

Landing on one cause is a strength — you rarely spiral into a list of five problems.

Spot the pattern — WORKING AREA

Spotting the pattern is developing; you catch the recurring misses but not always on the day.

Diagnose honestly — STRENGTH

Diagnosing honestly holds up well — you don't flatter yourself about what actually went wrong.

Ask for help — STRENGTH

Asking for help is a healthy habit; you'll take a read from your pro rather than guess alone.

The order matters here: when you diagnose before the emotion has cleared, your otherwise honest read tilts toward the swing, and the real mental cause slips past you.

PRIMARY ADVICE

After a miss, let the ten-second settle happen first, then ask 'mental or technical?' — a diagnosis made while still annoyed usually blames the swing.

Extra tip: *Hold yourself to one cause per miss; the moment you list a second, you're rebuilding instead of fixing.*

MENTAL DRILL 1

For 5 misses in a round, name a single cause out loud in four words or fewer. You succeed when none of the five spirals into a list. Once that holds, do it only after you've taken your ten-second settle.

MENTAL DRILL 2

After a range session, write one sentence per mishit: cause, nothing else. You succeed when every line names just one thing. Once easy, separate 'mental' from 'technical' causes into two columns.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"One cause, then I move on."

STEP 8 OF 8 · POST

Transfer

Influenced by: Resilience 5.8/10 · Readiness — the foundation

5.2/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

"You read the course beautifully, but your misses don't yet become tomorrow's targets."

> *On the 17th, closing out the round, you stood over a tee shot facing the same tucked-right pin that caught you earlier on the 8th. The lesson from that hole never reached this one. You aimed at the same spot, missed the same way, and walked off without the earlier miss ever teaching you anything.*

DEFINITION

You give meaning to what the Analysis showed and carry it forward — you store it as an insight for after the round. That way you get to know your strengths and weaknesses over time and know exactly what to work on.

When a miss repeats, you don't always connect it to the last time it happened, so the same pin catches you twice. The lesson is there — it just doesn't yet travel from one hole, or one round, to the next.

ON THE CARD · YOU PAY FOR THE SAME MISTAKE TWICE WHEN A LESSON STAYS ON THE HOLE IT HAPPENED ON.

Your round feels stuck when the same miss keeps costing you because its lesson never arrives.

IF YOU DO JUST ONE THING **Keep one lesson from each round and carry it forward.**

Transfer is the difference between a golfer who repeats a mistake and one who turns last week's miss into this week's aim.

THE FIVE COMPONENTS OF TRANSFER

Misses teach you · START HERE — WORKING AREA

Letting misses teach you is the piece that's furthest back — too many slip past without a lesson.

Look back — WORKING AREA

Looking back after a round is developing; you'll review, but not always with a takeaway.

Turn miss to aim — WORKING AREA

Turning a miss into an aim is inconsistent — the fix doesn't yet reliably become next time's target.

Find the fix — WORKING AREA

Finding the fix works on occasion, though it doesn't always stick for the next round.

Keep one lesson — WORKING AREA

Keeping one lesson is still forming — the single takeaway often fades before you tee it up again.

It breaks at the first link: if a miss never registers as a lesson, there's nothing to look back on, nothing to turn into an aim, and the fix never makes the next tee.

PRIMARY ADVICE

Keep a single note per round — one miss, one adjustment — and read it on the first tee next time so the lesson actually travels.

Extra tip: *When a familiar miss shows up, say out loud 'this is the 8th again' — naming the repeat is how it stops being a surprise.*

MENTAL DRILL 1

After each round, write one miss and the exact aim that fixes it. Keep it to 3 lines. You succeed when next round you recall it unprompted. Once that holds, check it on the first tee as a ritual.

MENTAL DRILL 2

On the range, pick 5 shots that repeat your most common miss and rehearse the corrected aim. You succeed when the adjustment feels automatic. Once easy, take that exact aim to the hole that keeps catching you.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"This miss becomes next time's aim."

PART 2 · CONTINUED

The four influencing factors

You have now seen your eight steps — the mental routine itself. But how well that routine holds up depends on four factors around it, in shot order: how you weigh **risk** before the shot, how **pressure** loads your swing, how quickly you **bounce back** after the shot, and how **ready** you are — the game you have available today.

They are not steps, but the conditions that decide whether the routine holds when it gets tense. We look at each factor through the same four lenses: Knowledge (what do you know?), Context (what is true here?), Dialogue (say the shot) and Self (are you ready to hit it?). Four factors times four lenses: sixteen sub-factors.

INFLUENCING FACTOR 1 OF 4

Risk appetite

Pre-shot: club, target, line and miss

4.3/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *Par 5, 230 to a tucked pin over water. You grab 3-wood because it feels bold, not because the carry number backs it. The shot leaks right into the hazard — and the decision was made by mood, not by math.*

WHAT THIS FACTOR IS

Risk appetite sets the shot before commitment begins: which club, which target, which line and which miss you accept. It is neither courage nor caution. With a poor risk call the atmosphere decides — mood, ego or another player — and the numbers are guessed or ignored. With a good risk call the facts decide: a known carry, a clear target and an acceptable miss, and then full commitment. Judge the decision separately from the result.

Knowledge sets odds · context sets exposure · dialogue states reasons · self carries consequences

At 4.3 your risk call is a genuine work-on. Playing off 6.3, your shot-making is good enough that the decision, not the swing, is leaking strokes. Too often the atmosphere picks the club. The upside is clear: better calls alone will tighten your scores without touching your technique.

HOW THIS HITS YOUR ROUTINE

Primarily in the pre-shot, in Focus and Concentration: club, target, line and miss. A good pre-shot produces a target that is specific, reachable and in line with your form. Skewed by risk appetite, the choice turns too aggressive or too cautious — and that happens before the swing, not inside it. In the swing it asks for commitment to the chosen shot; after the shot, for reviewing the decision, not the score.

> *Guessed decisions turn makeable pars into needless doubles.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a playing partner over a tempting par 5 second shot — does he check a yardage and pick a target, or just swing?

IF YOU DO JUST ONE THING Let the carry number pick the club, not the mood.

THE FOUR SUB-FACTORS OF RISK APPETITE

KNOWLEDGE Calibration · START HERE — GROWTH AREA

At 3.4, your risk profile isn't yet built on your real dispersion and success rates.

CONTEXT Exposure — WORKING AREA

At 4.6, you read lie, wind and trouble only part of the time.

DIALOGUE Rationale — WORKING AREA

At 4.0, your reasoning for club and line often stays unspoken.

SELF Tolerance — WORKING AREA

At 5.2, you can genuinely stand behind a chosen shot and its cost.

PRIMARY ADVICE

Before every club pull, state one carry number and one acceptable miss out loud. No number, no commitment.

Extra tip: *On risky shots, define the bailout first. Know where a safe miss lives before you ever commit to the hero line.*

DRILL 1 · ON THE COURSE

On the range, hit ten shots to a defined target with a named acceptable miss left and right. Score a 'hit' only when the ball finishes inside that window, not just near the flag.

DRILL 2 · AT HOME

At home, review three recent holes. Write the decision you made and the decision the facts supported. Judge each call on reasoning only, never on where the ball ended up.

OBSERVATION POINT · CALIBRATION — *"Play your percentage."*

Watch for: Chooses from memory or best-case ability; no reference to stock dispersion or actual percentages.

Ask: What percentage shot is this for you? **Probe:** What evidence from practice or recent rounds supports that?

KEY LINE FOR THIS FACTOR

"Your swing can handle the shot; let the facts decide which shot."

INFLUENCING FACTOR 2 OF 4

Pressure

Swing: tension, tempo and freedom

5.0/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *Standing on the 18th tee, one over the number you wanted, you feel the grip tighten and the tempo quicken. Same swing, more load — and the tee shot gets steered right instead of swung free.*

WHAT THIS FACTOR IS

Pressure makes the shot feel bigger than it is. It loads the routine — especially attention, tension and commitment — and is felt most in the swing: rushing, steering, a tighter grip, a shorter breath. Pressure can come from outside (a match, the cut, the final hole) or be added by yourself (the score, fear of the miss, wanting to prove something). The routine stays the same; only the load increases.

Knowledge locates the limit · context supplies load · dialogue frames meaning · self registers activation

At 5.0 pressure is a true work-area. Off 6.3 you hold up fine most rounds, but the big moments still load your swing — rushing, steering, a shorter breath. The task isn't zero nerves; it's keeping a usable playing level when the hole matters.

HOW THIS HITS YOUR ROUTINE

Primarily in the swing: grip, breath, tempo and freedom. Conviction loses its ease and Trust is the most pressure-sensitive step of all — the urge to steer IS a pressure response. Pressure can already build in the pre-shot (outcome thinking, bodily tension); after the shot it asks you to keep the result in proportion.

> *Tight finishes leak shots when the swing gets steered.*

OBSERVATION POINT · WATCH SOMEONE ELSE

On a tough hole with the match on the line, watch a partner's shot difficulty versus his reaction — does the situation's real demand match how he plays it?

IF YOU DO JUST ONE THING Keep the breath long and the grip light when the hole gets big.

THE FOUR SUB-FACTORS OF PRESSURE

KNOWLEDGE Threshold — WORKING AREA

At 5.9, you partly know where pressure starts to shift your tempo and attention.

CONTEXT Demand · START HERE — WORKING AREA

At 4.1, you often add weight beyond what the situation truly asks.

DIALOGUE Narrative — WORKING AREA

At 5.3, your inner dialogue sometimes enlarges the moment, sometimes holds it.

SELF Arousal — WORKING AREA

At 4.7, your activation level is workable but not yet consistently usable.

PRIMARY ADVICE

On the shot that feels big, take one slow breath and make your practice swing full-length. A full rehearsal tells the body the load hasn't changed.

Extra tip: *Match the grip pressure of your range swings. On pressure shots, check your hands are at a four out of ten before you take it back.*

DRILL 1 · ON THE COURSE

On the range, create a consequence: one target, one ball, must-hit to win. Notice your breath and grip, then deliberately keep both at your normal level before swinging.

DRILL 2 · AT HOME

At home, replay a recent pressure shot. Name the exact moment your tempo changed and rehearse one short phrase that keeps the shot its true size.

OBSERVATION POINT · DEMAND — *"Read the stakes."*

Watch for: Treats every shot as equally important — or inflates the real score, format or consequence.

Ask: What does this shot actually require? **Probe:** Which consequence is real, and which is added?

KEY LINE FOR THIS FACTOR

"The shot never grows; only the weight you hang on it does."

INFLUENCING FACTOR 3 OF 4

Resilience

Post-shot: recover, reset and learn

5.8/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *You three-putt the 9th and carry it to the 10th tee. The plan gets careless, the tempo stays quick, and a second loose shot follows — the last hole is still playing while you stand over the next one.*

WHAT THIS FACTOR IS

Resilience gets you to the next shot. It ends the carryover from the last shot and frees your attention for the next routine. As long as the previous shot is still playing — in your emotion, your tempo or your decisions — the reset is not finished. The reset is complete when you are available again for the shot in front of you.

Knowledge tracks the pattern · context selects the response · dialogue turns attention · self regains state

At 5.8 your reset is a solid work-area with real upside. Off 6.3 you recover from most setbacks, but the carryover isn't always fully closed before the next routine. When the previous shot stops playing, your attention is free — and your scoring runs cleaner.

HOW THIS HITS YOUR ROUTINE

Primarily in the post-shot: Evaluation keeps emotion calibrated, Acceptance closes the shot, Analysis turns it into information and Transfer carries one lesson forward. But carryover can also enter the next plan and disturb the next swing.

> *One lingering miss too often becomes a two-shot stretch.*

OBSERVATION POINT · WATCH SOMEONE ELSE

After a partner misses a short putt, listen for what he says to himself walking off — does his talk close the hole or replay it?

IF YOU DO JUST ONE THING Say what matters now, then walk to the next shot clean.

THE FOUR SUB-FACTORS OF RESILIENCE

KNOWLEDGE **Trajectory** — WORKING AREA

At 6.7, you know your recovery pattern well — how long a miss tends to linger.

CONTEXT **Agility** — WORKING AREA

At 6.1, you adapt your recovery to what the round actually requires.

DIALOGUE **Reorientation** · START HERE — WORKING AREA

At 4.9, you don't yet reliably put the turning point into words.

SELF **Elasticity** — WORKING AREA

At 5.5, your internal return to a playable state is steady but still developing.

PRIMARY ADVICE

After a miss, name one thing that matters for the very next shot out loud. A verbal turning point closes the last one.

Extra tip: *Give yourself a fixed marker — reaching your ball — as the line where the previous shot is done and the next routine begins.*

DRILL 1 · ON THE COURSE

During a practice round, after every bogey or worse, say one short sentence that names what matters now before you walk to the next shot. Treat it as non-negotiable.

DRILL 2 · AT HOME

At home, recall two recent setbacks that spiralled. Write the sentence that would have closed each one, so the phrase is ready on the course.

OBSERVATION POINT · REORIENTATION — *"Name the next task."*

Watch for: Keeps talking about the previous shot or cannot formulate one clear next task.
Ask: What matters now? **Probe:** Can you say the next job in one sentence?

KEY LINE FOR THIS FACTOR

"The last shot stops scoring the moment you let it stop playing."

INFLUENCING FACTOR 4 OF 4

Readiness

Whole routine: the game available today

7.4/10

STRENGTH

A STRENGTH THAT HOLDS YOUR ROUTINE UP UNDER PRESSURE

> *You arrive warmed up, know your carries are a touch short in the cold, and plan the round around it — clubbing up, picking fatter targets. The game you brought to the first tee is the game you actually play.*

WHAT THIS FACTOR IS

Readiness is the game available today. It matches your plan to the body, swing, numbers and equipment actually present. Not ready means the plan asks for a shot you cannot reliably produce today. Ready means you can stand over the ball and execute what has actually been prepared. Play the game you brought to the first tee.

Knowledge builds the base · context tests fit · dialogue formulates the plan · self provides presence

At 7.4 readiness is a clear strength. Off 6.3 you prepare well and match your plan to the day rather than forcing an ideal version. Your foundation and fit are excellent. The next edge is sharpening how you put today's read into a crisp, usable plan.

HOW THIS HITS YOUR ROUTINE

Readiness runs through the whole routine: an available body, numbers and shot in the pre-shot; an available swing and trust in the swing; and available attention to learn in the post-shot.

> *Playing the game you actually brought keeps your scores steady.*

OBSERVATION POINT · WATCH SOMEONE ELSE

On the first tee, watch how a partner describes his game for the day — does he give a clear plan or just a vague feeling?

IF YOU DO JUST ONE THING Diagnose today's game in one sentence, then build the plan on it.

THE FOUR SUB-FACTORS OF READINESS

KNOWLEDGE **Foundation** — STRENGTH

At 8.3, your practice, recovery and verified patterns give you a strong base.

CONTEXT **Fit** — STRENGTH

At 7.7, you match today's game to the course and conditions well.

DIALOGUE **Formulation** · START HERE — WORKING AREA

At 6.5, turning your read into a crisp usable plan is your growth edge here.

SELF **Presence** — STRENGTH

At 7.1, you arrive gathered and able to run the whole routine.

PRIMARY ADVICE

On the first tee, state in one sentence what today's game can and can't do. Make the read explicit so the plan follows it.

Extra tip: *When something's off — tempo, a shot shape — adjust the plan openly rather than hoping the ideal version shows up mid-round.*

DRILL 1 · ON THE COURSE

On the range before a round, diagnose today's ball flight in one sentence, then set three course targets that fit it. Carry that plan straight to the first tee.

DRILL 2 · AT HOME

At home, build a two-line pre-round checklist: today's capacity, and the plan it supports. Practise stating it so the formulation becomes automatic.

OBSERVATION POINT · FORMULATION — *"Call today's game."*

Watch for: Cannot diagnose present readiness or state one plan that fits current capacity and conditions.

Ask: What game have you brought today? **Probe:** Say one plan that fits it.

KEY LINE FOR THIS FACTOR

"You bring a strong game to the tee; now say it out loud."

ONE EXTRA INTERVENTION

Learning by observing

With each of your four factors comes an **observation point**. That is no side note — it is an intervention in itself. Your sharpest insight into your own mental game often comes not from looking inward, but from *someone else* watching.

When you deliberately watch how a playing partner handles pressure, a missed putt, a risky decision, two things happen at once. You see a pattern you do not spot so easily in yourself — the tension in the shoulders on the first tee, the tempo that changes after a bad shot, the club picked too quickly. And right at that moment you become more aware of your own routine and your own factors. Observing makes the abstract concrete.

> *The beauty is: it costs you nothing extra. You already play in company. By watching one thing in someone else for one round at a time, you build an eye for the mental game — which you then turn on yourself. What you learn to spot in others, you recognise in yourself.*

HOW TO GO ABOUT IT

Pick one factor per round. In yourself or in one playing partner, watch the observation point that belongs to it. Fact first — what a camera would capture — and only then the meaning. Wait for three comparable moments before you call it a pattern. After the round, ask yourself: what did I see, and did I recognise it in myself too?

FINALLY

This is *yours now*

Chris, you already know how to win a hole before you swing — that's rare, and it's yours. What you've seen in these pages is the other half: that the same intensity which makes your reading so sharp is what keeps a miss in your head too long. Knowing that is the whole turn. You walk onto the next tee understanding yourself as a golfer — and the real work, and the real freedom, starts right there.

WANT TO GO FURTHER?

The next step *in your story*

Reading a report changes nothing on the course yet — you know that. The real gain, and the real fun, only start when you pick one thing and work on it. And you do not have to do that alone.

For that, MentalRoutine builds from exactly this profile a personal **Training report**: a personal workbook of around ten pages, tuned to your scores and your level of play. No generic tips, but exercises, mantras and stories that fit where you stand now — the logical next step after what you have just read about yourself.

YOUR PERSONAL ADVICE

Where you are best *placed to begin*

We laid your full profile side by side: your eight steps with their forty components, and your four influencing factors. Below are the three topics where training pays off most for you now — your two biggest opportunities and your strongest step. The same three are waiting as advice in your portal.

YOUR THREE RECOMMENDED TOPICS

Each its own training report — together exactly the three included with your assessment.

1. Acceptance
start with: Let go

IMPROVE
score 4.4/10

2. Transfer
start with: Misses teach you

IMPROVE
score 5.2/10

3. Focus
start with: Pick a target

LEVERAGE
score 8.1/10

OR CHOOSE AN INFLUENCING FACTOR

You can also spend one of your three reports on a factor. For you, **Risk appetite** (4.3/10) is the obvious choice — start there with **Calibration** — *"Play your percentage."*

HOW TO START

Start with the first topic: that is where the most is to be gained. Rather go another way? In your portal you choose freely from all twelve topics.

Your training reports are waiting in your portal — that is where you choose what to pick up first.

Go to the portal →

AFTER THIS REPORT

How your *training works*

HOW A TRAINING REPORT WORKS

A STEP OF YOUR ROUTINE

Trains one of your eight steps through five angles, tuned to your score on each component. Choose this if you want to work on a part of your routine.

AN INFLUENCING FACTOR

Trains one of your four factors through the four lenses: knowledge, context, dialogue and self. Choose this if the terrain around your routine costs you most.

> Nothing extra to arrange: three training reports are included with your assessment, and you choose them yourself from all twelve topics — your eight steps and your four factors. Everything is ready in your portal, at your own pace.

TWO WAYS TO GROW

IMPROVE

With a lower score. The report motivates and builds: small, doable steps that make your weak spot stronger bit by bit. This is often the quickest gain.

LEVERAGE

With a high score. The report inspires: how do you use a strength you already have even more deliberately, so it wins you shots on the holes that count?

WHEN TO MEASURE AGAIN?

Give yourself 3 to 6 months to work with your training reports and the advice in this report, and make sure you really practise in that period — count on at least 6 to 10 rounds or 8 to 12 practice sessions where you work on it deliberately. Then take the MentalRoutine Assessment again. Where you truly changed something, you will see it as a clear shift in your profile — not in a single decimal, but in the direction a whole step moves.

"The greens are not going anywhere. The game will always be here for you. What you choose to do with what you've learned — that's entirely yours."

— MENTALROUTINE · WWW.MENTALROUTINE.COM
