READING GUIDE

This report — *how to read it*

1 **Start here: Mental Index & Archetype** (next page)
Your overall score and archetype — a 2 minute read, direct insight into your mental profile.

2 **Then go to Priorities + Action plan** (page 11–12)
Three concrete priorities and an action plan for before, during and after the round. Cut out the tear-off card — take it to the course (in your bag or to a partner).

3 **Use Part 2 as a reference or with your coach**
Per step a scene on the course you will recognise, your five components and concrete drills — then your four factors with their lenses. Ideal to share with a teaching professional or sport psychologist before a session.

The holes and moments we describe are recognisable example situations based on your answers — not rounds we watched, but a mirror of how you describe yourself on the course.

YOUR 8 STEPS — QUICK GUIDE

Focus	7.4/10
Concentration	6.9/10
Conviction	7.1/10
Trust ★ Strongest step	7.8/10
Evaluation	6.3/10
Acceptance ▼ Biggest opportunity	5.6/10
Analysis	6.0/10
Transfer	6.4/10

HOW DO YOU READ A SCORE?

7.0–10	**Strength** — build on this; use it as an anchor under pressure.
4.0–6.9	**Working area** — functional but inconsistent; focused attention pays off.
0–3.9	**Growth area** — most to be gained here; this step costs you energy now.

'Strongest step' and 'biggest opportunity' compare your steps with each other; strength, working area and growth area say where a score sits on the scale.

WHERE YOUR MENTAL INDEX (6.7) SITS

0–3.9 · Growth area Working area 7.0–10 · Strength

MENTAL INDEX & ARCHETYPE

MENTAL INDEX

The higher your Mental Index, the stronger you experience your own mental game

A 6.7 says your game has a strong, reliable spine — the way you prepare and swing holds up. The slips are nearly all on the back end, in how long a bad hole stays with you.

YOUR ARCHETYPE

The Committer

Once you pull a club, you go all in. No half measures.

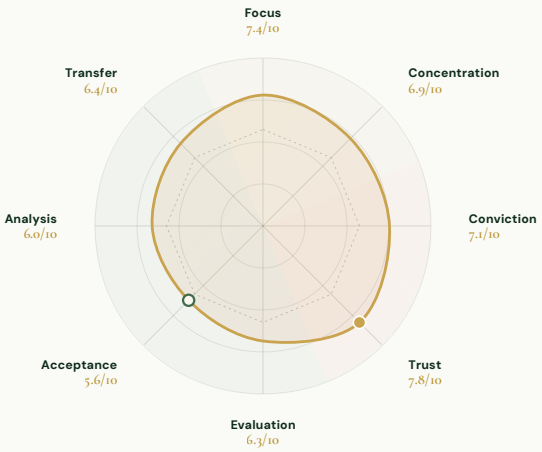

"Golf is a game that is played on a five-inch course — the distance between your ears."

— BOBBY JONES

MENTAL FINGERPRINT

Readiness	5.0/10

Not steps, but the conditions that decide whether your routine holds. Covered in Part 2.

6.7
MENTAL INDEX

The further a point sits from the centre, the stronger that step. Your silhouette shows at a glance where your foundation lies — and where the most is to be gained.

INTRODUCTION

Welcome to *your report*

FOR YOU

This report isn't a verdict, Sam. It's a mirror held up to how you already play — the parts that carry you and the parts that drag. Nothing here is a grade on who you are. Read it as a conversation about the golfer you clearly already are, and the one you're becoming.

WHAT YOUR SILHOUETTE SAYS

Your game runs on commitment: you choose a shot and you trust it fully, and that trust is the best thing you own on the course. The trouble shows up after the ball lands — a bad result lingers, and you're still chewing on it while you're standing over the next shot. So your rounds don't fall apart from bad swings; they fall apart from good swings you haven't let go of yet.

Where the shape bulges outward lies your foundation. Where it caves in lies the most gain. Part 2 tells you per step what to do about it.

"If I commit to the shot and trust my routine, the result takes care of itself."

— ANNIKA SÖRENSTAM

ABOUT THIS REPORT

How does *the MentalRoutine work?*

THE MODEL AND THIS REPORT

The model is built on sport-psychology research — how you steer attention, handle tension and stay motivated — and tested on more than 1,000 golfers, from handicap 0 to 36+. The next page shows at a glance how it fits together: three phases, eight steps with five components each, and four influencing factors with four lenses each. The report has two parts. Part 1 is your portrait: what your scores say, where your strength lies and where you start. Part 2 is your reference: every step and then every factor worked out in full, with exercises.

HOW YOUR SCORES ARE BUILT

You answer a series of questions about your routine and the factors around it — 20 to 25 minutes in all. Per step we measure five components (forty in all) and per influencing factor four sub-factors (sixteen in all). Every score is a mark from 0 to 10, based on the maximum attainable score on that component — so you see at a glance where you are strong and where the most room lies. The Mental Index (0–10) sums your eight steps in one number.

Important: these scores measure how you experience your own game — not an outside, measured performance. Read a 10 as "the top of the scale", not as perfection. Because it reflects your own experience, the scores point you straight to where it chafes for you.

THIS REPORT IS UNIQUE TO YOUR PROFILE

The course scenes, comparisons and advice in this report are not generic — they are built from your own answers and handicap (24.0). It works for golfers at every level, from handicap 0 to 36+. There is no "right" or "wrong" mental profile. This report helps you understand yourself better; it is not a medical or psychological diagnosis. Struggling with severe tension or stress around your game? Speak to a sport psychologist.

THE MODEL

One routine. Eight steps. *Every shot.*

Not eight separate parts, but one routine you run in the same order on every shot — and the terrain that routine has to get through. The shot routine tells you when something happens (before, during or after the shot), the mental routine what you do at that moment, and the influencing factors what makes it easier or harder.

PRE-SHOT		SWING		POST-SHOT			
1	2	3	4	5	6	7	8
Focus	Concentration	Conviction	Trust	Evaluation	Acceptance	Analysis	Transfer
Risk appetite 7.2		**Pressure** 6.8		**Resilience** 5.4			
Interferes with your target and plan: the risk you accept before the shot.		Interferes with conviction and a free swing: under real pressure your game falls back on what is ingrained.		Interferes with processing after the shot — and decides whether a miss carries into the Focus of your next shot.			

↻ *Step 8, Transfer, hands the next shot its Focus — that is how the loop closes.*

READINESS — THE FOUNDATION 5.0

Your capacity to run any of this at all: built over time, plus your state today. Readiness is not one point in the loop, but the ground under every step.

HOW TO USE THE MODEL — FOUR QUESTIONS FOR EVERY SHOT

1 · When?
THE SHOT ROUTINE
Before, during or after the shot: three phases.

2 · Which step?
THE MENTAL ROUTINE
Eight steps, each with five trainable components — forty in all.

3 · What was in play?
THE INFLUENCING FACTORS
Four factors, each seen through four lenses: knowledge, context, dialogue and self — sixteen in all.

4 · What now?
ONE ACTION
One exercise, cue or reset for the next comparable shot. You find them per step and per factor in Part 2.

Together 56 measurement points: 40 in your routine, 16 in the factors around it. Every piece of advice in this report works on one of them.

Pre-Shot · Swing · *Post-Shot*

Your Pre-Shot is clear and your Swing is fearless — you stand over the ball knowing what you want and you turn it loose. That's your anchor, Sam. The break point comes after the ball stops: the processing of a poor result is where your round leaks, because the swing was never the problem.

PRE-SHOT
Preparation

7.2/10

FOCUS
CONCENTRATION

You stand behind the ball, pick your line, and you're ready to go without second-guessing the plan you just made.

Influenced by: **Risk appetite** 7.2/10

SWING
Execution

7.4/10

CONVICTION
TRUST

You turn it loose on the shot you chose — no last-second steering, no shortened swing to play safe.

Influenced by: **Pressure** 6.8/10

POST-SHOT
Processing

6.1/10

EVALUATION
ACCEPTANCE
ANALYSIS
TRANSFER

You take the result harder than you need to, and the last bad one is still with you as you address the next.

Influenced by: **Resilience** 5.4/10

Readiness 5.0/10 — the foundation under all three phases

ENERGY LEAK

The leak runs from Swing into Post-Shot: you commit beautifully, then a flared iron follows you up the fairway and onto the next tee.

PART 1 · THE BIG PICTURE

The All-In Swing and the Heavy Miss

On the 8th you had a semi-blind approach over a cross-bunker, picked your club, and flushed it — no steering, full send, exactly the shot you saw. That's the best of you, Sam: your Trust is the highest thing you own. But here's what nobody's told you — the same full-commitment nature that makes your swing fearless is exactly what makes a miss impossible to shrug off. You gave the shot everything, so when it doesn't come off, it costs you everything too.

> *You can't give a shot everything and then ask the miss to weigh nothing.*

STRONGEST STEP

Trust

7.8/10

Lean on your Trust as the backbone of the whole round — on the holes where nerves creep in, fall back on the free swing you already own.

BIGGEST OPPORTUNITY

Acceptance

5.6/10

"As full as I swung, I let go."

On the 12th, when a flared approach leaves you short-sided and the heat rises, whisper it before you pick up the ball to chip.

YOUR NEXT STEPS

Three routes *forward*

ROUTE 01

More *enjoyment* in the game

More enjoyment, for you, isn't about scoring lower — it's about how the walk to the next tee feels. Right now a flared iron rides along with you and quietly sours three holes. Work on the back end of your routine and that same flared iron becomes a shrug by the time you reach your bag.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · TRANSFER · CONCENTRATION

These three decide how heavy or light your round feels between shots. Lighten the back end and the whole walk becomes something you look forward to again.

ROUTE 02

Better *performance*

For better scoring off a 24, the gold isn't in the swing — it's in not stacking a second mistake on the first. When a bogey drags you into a double, that's two holes gone, not one. Tighten your Post-Shot and you stop giving away the hole after the hole.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · EVALUATION · ANALYSIS

Your swing and prep already hold up — the scoring leak is all behind the ball. Clean up how you read, accept and diagnose a miss and the strokes come back on their own.

ROUTE 03

Enjoyment & performance

The balance road uses what you already own to fix what you don't. Your Trust and clear Pre-Shot are your anchors — lean on them while you build a calmer back end. You keep the fearless swing and lose the heavy walk.

GIVE THESE STEPS PRIORITY

ACCEPTANCE · TRUST · FOCUS

Trust and Focus are already strengths you can lean on; Acceptance is where the round gets lighter and lower at once. Together they let you build without feeling like you're tearing your game apart.

PRIORITIES

Where to begin — *your focus*

LEVERAGE YOUR STRENGTHS

TRUST · FOCUS · CONVICTION

When a hole gets tight, fall back on what already works: step behind the ball, pick one clear target, and commit the way you always do. Your fearless swing is your safe harbour on the holes where nerves creep in — use it on purpose, not just by instinct.

HANDLING YOUR OPPORTUNITIES WELL

EVALUATION · ANALYSIS · ACCEPTANCE

Don't try to fix Evaluation, Analysis and Acceptance all at once — that's a sure way to overload a good round. Start with Acceptance alone, because everything else downstream depends on a calm head first. Get the miss off your back cleanly, and watching and diagnosing honestly become easy afterward.

YOUR TOP 3 PRIORITIES NOW

1. Acceptance first — because letting a miss go cleanly is what unlocks every other repair in your Post-Shot, and it's where your round gets lightest.
2. Evaluation next — once you're calm, you can actually see what the ball did instead of guessing, which stops the miss from growing in your head.
3. Analysis third — with a clear head and honest eyes, you finally pin one real cause instead of carrying a vague worry to the next tee.

YOUR 4 WEEKS — STEP BY STEP

WEEK 1

After every miss, loosen your glove and take one slow breath before walking.

WEEK 2

Add one plain fact about the miss — direction and distance — after that breath.

WEEK 3

Before the decisive shot, commit out loud to one club and go.

WEEK 4

String the breath, the fact and the commit into one smooth routine.

GETTING TO WORK

Your personal *action plan*

MEASURE IT ON THE COURSE — THIS ROUND

- ☐ Count how many times a bogey was immediately followed by another bogey during the round.
- ☐ Tally how often you were still replaying the last shot while standing over the next one.
- ☐ Note how many times you named one plain fact about a miss before walking on.

TEST THIS REPORT'S CORE YOURSELF

☐ Over three rounds, after each miss tag it as either a well-struck shot with bad luck or a miss you half-expected, and mark whether you were loose again within ten seconds. Does the well-struck-but-unlucky kind really hang on you longer? Then this report's core holds.

Before

THE ROUND

- Decide before the first tee that one bad swing won't cost you two holes today.
- Pick one hole where you'll practise letting go, and tell yourself which one.
- Pack a spare glove so loosening and resetting it becomes your reset trigger.

During

ON THE COURSE

- Loosen your glove after every miss before you take a single step forward.
- Say one plain fact about the miss out loud, then let it go.
- On the decisive shot, commit to one club and swing without a safety poke.

After

REFLECTION

- Write down the single bogey that followed another, and what came first.
- Note one miss you let go cleanly and give yourself credit for it.
- Pick one lesson from the round and write it in a single line.

TAKE THIS TO THE COURSE · PUT IT IN YOUR BAG

PRE-SHOT CUE	Pick one target, see the shot, then go.
RESET LINE	Glove loose, breathe out, walk on clean.

YOUR PROMISE SHEET

Sam

Sam, from your answers one thing stands out clearly: you don't do half measures. You pull a club and you give the shot everything — that loyalty to your own plan is rare, and it's the strongest thing you own. You also told me a miss sticks to you, that patience runs thin when a hole goes wrong; that's not a flaw in your game, it's the flip side of how fully you commit.

YOUR MAIN MANTRA — THE LINE FOR THIS ROUND

> *"As full as I swung, I let go."*

"The mind messes up more shots than the body."

— TOMMY BOLT

DEEP DIVE

Questions to *think about*

Write your first thoughts below. There are no right or wrong answers — only honest ones. You need not answer them straight away — feel free to come back later.

ON YOUR STRONGEST STEP — TRUST

On which tight holes do you lean on your Trust by instinct, and which ones could you choose it on purpose?

ON YOUR BIGGEST OPPORTUNITY — ACCEPTANCE

What exactly are you still holding onto as you address the next shot — and whose round is it serving?

OVERALL — YOUR COMPLETE PROFILE

If your swing is already fearless, what would change if your walk to the next tee were just as free?

YOUR INTENTION FOR THE NEXT ROUND

Which single mental habit will you build in over the next four weeks? Describe when, how and what for.

PART 2 OF THE REPORT

Your Complete *Profile*

Per step and per factor — worked out in full

In this part each of your eight steps is worked out in full: a scene on the course you will recognise, your score, the five components read personally, concrete advice, two exercises and a mantra. Then come your four influencing factors, each with the four lenses. Use Part 2 as a reference — or share it with your coach.

THE EIGHT STEPS

1. Focus	7.4	**17**
2. Concentration	6.9	**19**
3. Conviction	7.1	**21**
4. Trust	7.8	**23**
5. Evaluation	6.3	**25**
6. Acceptance	5.6	**27**
7. Analysis	6.0	**29**
8. Transfer	6.4	**31**

THE FOUR FACTORS

Risk appetite	7.2	**34**
Pressure	6.8	**36**
Resilience	5.4	**38**
Readiness	5.0	**40**

FOR YOUR COACH — IN 90 SECONDS

BIGGEST GAIN	His biggest gain is on the back end of the routine: a clean, physical let-go after a miss will stop the second-mistake spiral that's bleeding his rounds.
CORE DIAGNOSIS	His greatest strength and his main leak are one trait: total commitment. He swings fully trusting, which also means a miss lands with full weight — Trust high, Acceptance low, same wiring.
START QUESTION	*"When a hole goes wrong, what exactly are you still carrying as you stand over the next shot?"*

Every step has its own story.
This one is yours.

STEP 1 OF 8 · PRE

Focus

Influenced by: Risk appetite 7.2/10 · Readiness — the foundation

7.4/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"You know what you want before you ever stand to the ball."

> *On the 2nd, a mid-length par 4 into a soft breeze, you stepped behind the ball, saw the shot land just short of the green, and picked your club without a flicker of doubt. You trusted the picture and swung. The ball finished right where you'd seen it, pin-high and safe.*

DEFINITION

You pick the target area, settle your club choice and see the ball flight before you swing. This includes course management: how do you play the hole strategically, in a way that suits your own game? Focus must be fully finished before you move on to concentration.

When you stand on a tricky hole, you don't dither — you settle on a target and a club and you're ready. That clarity is why your Pre-Shot almost never costs you a stroke.

BLIND SPOT?

Late in a round, legs tired on the 16th or 17th, you can grab the first picture that feels good enough instead of the best one — speed turning into a shortcut. Worth a quick check with your pro once.

ON THE CARD · YOUR CLEAR PICTURE MEANS YOU RARELY WASTE A SHOT STANDING THERE UNSURE OF WHAT YOU'RE TRYING TO DO.

You arrive over the ball with a clear picture, so there's no fog to swing through.

IF YOU DO JUST ONE THING **Name your landing spot out loud before every shot.**

Focus is the difference between aiming at 'the green' and aiming at the front-left slope that feeds toward the pin.

THE FIVE COMPONENTS OF FOCUS

Pick a target · START HERE — WORKING AREA

You settle on a target quickly, though on tight holes you sometimes aim a touch broad.

See the shot — STRENGTH

Seeing the shot land before you swing comes to you naturally — it's your best Pre-Shot weapon.

Judge it honestly — STRENGTH

You read your own ability honestly and rarely bite off more than you can chew.

Weigh the risk — STRENGTH

Weighing the risk is instinctive for you; you pick the smart play on the dangerous holes.

Commit to it — STRENGTH

Once you've chosen, you stand to the ball fully committed — no lingering what-ifs.

It starts with seeing the shot: because that picture is so clear, your risk read and your commitment fall into place behind it — only the broad target on tight holes nudges the chain.

PRIMARY ADVICE

Keep naming your exact landing spot out loud, even on the easy holes — it keeps the habit loaded for the hole where it matters.

Extra tip: *On the last three holes, deliberately take one extra second behind the ball so tiredness doesn't rush your picture.*

MENTAL DRILL 1

On the back nine, on 3 holes, say your landing spot out loud before every full shot even when your legs are tired. Succeeds if you do it on all three. If that holds, carry it into every round's closing stretch.

MENTAL DRILL 2

On the range, hit 10 balls where you name a precise target — not 'left', but 'that flag's left shoulder' — before each. Succeeds if all 10 have a specific target. Then shrink the target to a single branch or marker.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I see it, I pick it, I go."

STEP 2 OF 8 · PRE

Concentration

Influenced by: Risk appetite 7.2/10 · Readiness — the foundation

6.9/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You can shut the noise out when you decide to."

> *On the 4th, a long par 4 with trouble right, a group was chattering on the next tee as you set up. You blocked them out, kept your eye on the back of the ball, and made your swing. You found the fairway and walked on without a word.*

DEFINITION

You put all your attention on that one task — the ball to the target area — and shut out everything that is irrelevant right now: the last shot, the state of the match, outside noise and inner doubt.

When something tries to pull your attention away over a shot, you can park it and stay with the ball. The one soft spot is holding that focus across a whole run of holes.

ON THE CARD · BECAUSE YOU SEAL OFF THE NOISE, YOU RARELY THROW A SHOT AWAY TO DISTRACTION — THE TROUBLE IS HOLDING IT HOLE AFTER HOLE.

You can seal off distractions over the ball, so outside noise rarely leaks into your swing.

02

IF YOU DO JUST ONE THING **Fix your eyes on one dimple before you take the club back.**

Concentration is the difference between hearing the voices on the next tee and noticing they've gone quiet only afterward.

THE FIVE COMPONENTS OF CONCENTRATION

Stay with it · START HERE — WORKING AREA

Staying with it over a full run of holes is where your focus thins out a little.

Park distractions — STRENGTH

Parking distractions is a real strength — chatter and movement slide right off you.

Eye on ball — WORKING AREA

Your eye stays on the ball well, with the odd lapse after a poor previous shot.

Reset — STRENGTH

Resetting your attention comes easily once you reach the ball.

Relax between shots — STRENGTH

You stay relaxed between shots, which keeps your focus fresh when you need it.

Four of these stand strong — it's staying with it across the whole round that holds the rest back; your reset and relaxation are fine, but focus simply thins over time.

PRIMARY ADVICE

Before each shot, pick one dimple on the back of the ball and keep your eyes there until contact — a tiny target steadies a wandering mind.

Extra tip: *Between shots, let yourself look at the trees or the sky, then narrow back in only when you reach the ball.*

MENTAL DRILL 1

On 5 holes, use a one-word trigger — 'now' — just before every full swing to snap your attention onto the ball. Succeeds if you do it on all five. If that sticks, use it on the holes right after a bad shot.

MENTAL DRILL 2

On the range, hit 10 balls with music or chatter playing; on each, stay locked on one dimple until contact. Succeeds if 8 of 10 feel undisturbed. Then try it standing on a busy first tee.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"This shot, this ball, right now."

STEP 3 OF 8 · SWING

Conviction

Influenced by: Pressure 6.8/10 · Readiness — the foundation

7.1/10

STRENGTH

A STRONG SIDE OF YOUR GAME

"Once you decide a shot is yours, you don't flinch from it."

> *On the 6th, a reachable-in-three par 5, you faced a lay-up with a fairway wood off a tight lie. You believed in the shot, took it on, and backed yourself all the way through the swing. The ball ran out to a spot that left you a simple pitch.*

DEFINITION

You are convinced you will hit the shot exactly as intended. You want it, you can do it, you do it. Doubt is useless and has to be switched off completely, because without conviction there is no good performance.

When you've picked the bold play, you take it on without shrinking — you commit. The small gap is in the quiet belief before you move, which can wobble on the harder shots.

BLIND SPOT?

On the toughest shots — a long carry over trouble — the belief can thin for a second right before you move, even though you still take it on. Worth testing with your pro once.

ON THE CARD · BECAUSE YOU TAKE THE SHOT ON FULLY, YOU RARELY HALF-SWING YOUR WAY INTO TROUBLE ON THE BOLD PLAYS.

You back the shot you chose, so you swing freely instead of steering a doubt.

03

IF YOU DO JUST ONE THING **Say 'this is my shot' before you take the club back.**

Conviction is the difference between hoping a shot comes off and standing there certain it will.

THE FIVE COMPONENTS OF CONVICTION

Believe in it · START HERE — WORKING AREA

Believing in it before you move is where belief occasionally thins on the hardest shots.

Fully commit — STRENGTH

Fully committing is a strength — once you move, there's no holding back.

Fire yourself up — WORKING AREA

You can fire yourself up for a shot, though it comes and goes a little.

Take it on — STRENGTH

Taking it on is instinctive — you don't shrink from the bold play.

Back yourself — STRENGTH

You back yourself well once the decision is made.

It hinges on the quiet belief first: when that thins on a hard carry, your fire dips with it — but your full commit and willingness to take it on usually pull the swing through anyway.

PRIMARY ADVICE

On the shot you've decided is yours, take one firm practice swing at full speed first — let your body feel the commitment before the ball does.

Extra tip: *When doubt flickers before a hard carry, name the reason you chose this club out loud, then go.*

MENTAL DRILL 1

On the course, on 3 decisive shots, commit out loud to your club before swinging — the full-commit nature you already have, said aloud. Succeeds if you do all three without a safety switch. Then add it to every approach.

MENTAL DRILL 2

On the range, hit 10 balls to a demanding target, saying 'this is my shot' before each. Succeeds if 8 feel genuinely committed, not hopeful. Then do it after a poor previous ball, when belief usually dips.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"This is my shot, all in."

STEP 4 OF 8 · SWING

Trust

Influenced by: Pressure 6.8/10 · Readiness — the foundation

7.8/10

STRENGTH ★ Strongest step

A STRONG SIDE OF YOUR GAME

"Your swing is loyal — it does what you told it to do."

> *On the 8th, a par 3 over a bunker to a tucked pin, you took your club, stayed loose, and made your normal swing with no swing-thoughts cluttering it. You didn't steer it or guard against the bunker — you hit your plan. The ball carried clean and sat down on the green.*

DEFINITION

You hit the shot with full commitment: no hesitation, nothing held back. This is 'stand there and do it'. The prep is done; now the loyal execution, with the right balance of power and calm.

When you stand over a shot with trouble in play, you swing free instead of guarding — no last-second steering. That loyalty to your plan is the highest thing in your whole game.

BLIND SPOT?

Under real pressure, your loose, free full swing doesn't always carry over to the short putts — on a 1.5-metre putt to save par, you can tighten and start steering the putter where you'd normally flow. Worth testing with your pro once.

ON THE CARD · BECAUSE YOU DON'T STEER, YOUR GOOD SWINGS ACTUALLY COME OUT AS GOOD SHOTS INSTEAD OF GUARDED ONES.

You turn the shot loose cleanly, so your swing never gets strangled by second-guessing.

04

IF YOU DO JUST ONE THING **Make your practice swing the feel you keep for the real one.**

Trust is the difference between swinging the shot you planned and steering a careful poke at the last second.

THE FIVE COMPONENTS OF TRUST

Don’t steer — RELATIVE WEAKEST

You don't steer the club — you let it swing, which is exactly as it should be.

No swing thoughts — STRENGTH

Swinging with no clutter of swing-thoughts is the cleanest part of your whole game.

Hit your plan — STRENGTH

You hit your plan rather than a last-second compromise, hole after hole.

Stay loose — STRENGTH

Staying loose over the ball comes naturally — under everyday play you don't tighten up.

Practise on purpose — STRENGTH

You practise with real intent, which is why the trust holds on the course.

It flows from a quiet mind: with no swing-thoughts cluttering you, you stay loose, don't steer, and hit your plan — one free swing feeding the next, and your purposeful practice keeps the whole chain oiled.

PRIMARY ADVICE

On the short putts that scare you, take the same loose, full practice stroke you'd take with a wedge — then repeat it exactly on the ball.

Extra tip: *Before each full shot, make one relaxed practice swing and vow to copy its rhythm, not improve on it.*

MENTAL DRILL 1

On the course, under a bit of pressure — a putt to save par — take your loose full-swing feel into the stroke on 5 such putts. Succeeds if you don't decelerate on any. If that holds, use it on every putt inside two metres.

MENTAL DRILL 2

On the practice green, roll 10 putts from 1.5 metres with the same free feel as your wedge swing, no steering. Succeeds if 8 reach the hole with pace. Then take it to the first green of your round.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Same loose swing, every time."

STEP 5 OF 8 · POST

Evaluation

Influenced by: Resilience 5.4/10 · Readiness — the foundation

6.3/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You judge the miss on feeling before you've really looked at it."

> *On the 10th, a dogleg par 4, you pushed an iron right of the green and your first thought was just 'that was awful' as you stabbed the club back in the bag. You didn't actually watch where it finished or why. On the next shot you were still guessing at the lie.*

DEFINITION

You note objectively what the ball did — strike feel, sound, direction, ball flight, distance, where it finished, divot — and match it against your Focus plan. This sets up the Analysis.

When you miss a green, you tend to label it 'bad' and move on without seeing what the ball actually did. That costs you, because you can't fix or accept a miss you never really watched.

ON THE CARD · WHEN YOU DON'T WATCH THE MISS, YOU CARRY A 'THAT WAS TERRIBLE' TO THE NEXT SHOT INSTEAD OF A FACT YOU CAN USE.

Reading the miss cleanly keeps your round lighter — you deal with what happened, not with a vague 'that was awful'.

05

IF YOU DO JUST ONE THING **Watch the ball all the way until it stops before reacting.**

Evaluation is the difference between 'that chip was terrible' and 'that chip ran a metre long, slightly heavy contact'.

THE FIVE COMPONENTS OF EVALUATION

Watch closely · START HERE — WORKING AREA

Watching the ball closely all the way down is where you most often look away too soon.

Judge the miss — WORKING AREA

Judging the miss itself works better for you once you've actually seen it.

Stay level-headed — WORKING AREA

Staying level-headed while you look is still unsteady — feeling arrives before facts.

Check your plan — WORKING AREA

Checking the result against your plan happens sometimes, not every hole yet.

Fixed order — WORKING AREA

Keeping a fixed order to your read is forming, but not automatic under pressure.

It starts with watching: when you don't track the ball cleanly, you judge the miss too harshly, never stay level while you look, and skip checking it against your plan.

PRIMARY ADVICE

After the ball stops, keep your eyes on the finishing spot for two full seconds and name where it ended — left, long, short — before you move the club.

Extra tip: *Make the same order every time: watch, say the fact, then pick up the club. Never react before you've looked.*

MENTAL DRILL 1

On 3 holes, after every full shot, track the ball until it stops and say one plain fact about where it finished. Succeeds if you watch every one fully. If that holds, do it for every shot in the round.

MENTAL DRILL 2

On the range, hit 10 shots and after each call the flight and finish out loud — 'pushed right, pitched short' — before the next. Succeeds if all 10 get a factual read, no 'bad'. Then take it onto the course.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"Watch it land, then judge it."

STEP 6 OF 8 · POST

Acceptance

Influenced by: Resilience 5.4/10 · Readiness — the foundation

5.6/10

WORKING AREA

▼ Biggest opportunity

SOLID — WITH ROOM TO SHARPEN FURTHER

"The miss you gave everything to is the one you can't put down."

> *On the 12th, after a flared approach left you short-sided in deep rough, you duffed the chip and felt the heat climb up your neck. You picked up quickly, walking faster, jaw set, still playing the chip over in your head. Three holes later it was still with you.*

DEFINITION

You accept the outcome of your shot, good or bad. It happened; you cannot change it any more. Emotions are allowed, but they have to be dealt with before you move to the next shot.

When a hole goes wrong, the result rides along with you and bleeds into the following shots. That's where your rounds really slip — not the swing, but the weight you carry off the green.

ON THE CARD · GOLFERS WITH THIS PATTERN DON'T LOSE STROKES ON THE BAD HOLE — THEY LOSE THEM ON THE TWO GOOD HOLES THEY PLAYED WHILE STILL FUMING.

Letting the miss go is what makes your walk to the next tee feel light instead of loaded.

IF YOU DO JUST ONE THING **After every miss, loosen your glove and breathe out once.**

Acceptance is the difference between a miss that stays on one hole and a miss that quietly ruins the next three.

THE FIVE COMPONENTS OF ACCEPTANCE

Let go · START HERE — WORKING AREA

Letting go is the hardest part for you — a miss clings longer than it should.

Be kind — WORKING AREA

Being kind to yourself after a mistake is starting, but self-criticism still wins often.

Keep perspective — WORKING AREA

Keeping perspective slips when a hole goes wrong — one bad shot feels bigger than it is.

Play on — WORKING AREA

Playing on is improving, yet the previous hole still tags along too often.

Enjoy good shots — WORKING AREA

Enjoying the good shots gets crowded out by dwelling on the bad ones.

It starts with letting go: when the miss won't release, you turn on yourself, lose perspective, struggle to play on, and the good shots never get their moment.

PRIMARY ADVICE

Loosen your glove and let your shoulders drop first, then one long breath out, then — only then — a single word: 'done'. The body settles before the mind can.

Extra tip: *Pick a physical marker on the hole — a tree, a sprinkler head — and tell yourself the miss stays there as you walk past it.*

MENTAL DRILL 1

On the range, hit 10 balls; after each poor one, loosen your glove and breathe out slowly within three seconds — turning your usual quick, jaw-set walk-off into a pause. Succeeds if you manage 8 of 10.

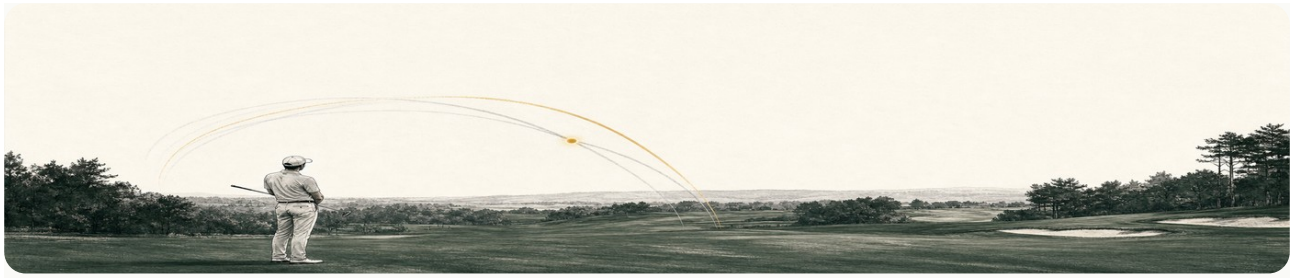

MENTAL DRILL 2

During a round, on 3 chosen holes, after any miss say one kind thing — 'good players miss there too' — before walking on. Succeeds if you do all three without replaying the shot. Then widen it to every miss on the back nine.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"I played it full, now it's done."

STEP 7 OF 8 · POST

Analysis

Influenced by: Resilience 5.4/10 · Readiness — the foundation

6.0/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You reach for a big, vague cause when one small fact would do."

> *On the 15th, a long par 4, you blocked your tee shot into the right trees and muttered that your whole swing had fallen apart. You weren't sure if it was a mental lapse or a technical slip — so you carried a vague worry to the next shot. One loose drive became a cloud over three holes.*

DEFINITION

You compare the shot you hit with the shot you had in mind during Focus. You look for the main cause of any difference — mental as well as technical — and draw one clear conclusion.

When you miss, you tend to blame the whole swing instead of one clear thing. That leaves you with worry rather than a fix, and worry follows you to the next tee.

ON THE CARD · WHEN YOU BLAME THE WHOLE SWING, YOU CARRY A FOG UP THE FAIRWAY THAT A SINGLE CLEAR FACT WOULD HAVE LIFTED.

Pinning one real cause keeps your head clear, so you're not dragging a vague worry up the fairway.

07

IF YOU DO JUST ONE THING **After a miss, name just one cause — not three.**

Analysis is the difference between 'my swing's gone' and 'I rushed the transition on that one shot'.

THE FIVE COMPONENTS OF ANALYSIS

Mental or technical? · START HERE — WORKING AREA

Telling mental from technical is still your blind spot — the two blur together after a miss.

One cause — WORKING AREA

Landing on one cause works better when you catch yourself before the panic spreads.

Spot the pattern — WORKING AREA

Spotting the repeating pattern across holes is forming, but not reliable yet.

Diagnose honestly — WORKING AREA

Diagnosing honestly happens when you're calm; under heat it slides toward blame.

Ask for help — WORKING AREA

You'll ask for help when you need it, which is a real asset to build on.

It hinges on the first split — mental or technical: miss that, and you can't land on one cause, see the pattern, or diagnose honestly when the heat is on.

PRIMARY ADVICE

After a miss, put the club back and ask yourself one question out loud: 'mental or technical?' Pick one answer, then let it go — don't open a second file.

Extra tip: *When you want to blame the whole swing, force it down to a single sentence — 'I came out of it early' — and stop there.*

MENTAL DRILL 1

On 3 holes, after any miss, say out loud 'mental or technical' and give one cause only. Succeeds if you name a single cause each time, never 'everything'. Then use it for every miss in the round.

MENTAL DRILL 2

At home, after a round, list your five worst shots and write one cause each in under ten words. Succeeds if none says 'whole swing'. Then bring that one-sentence habit onto the course.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"One cause, name it, move on."

STEP 8 OF 8 · POST

Transfer

Influenced by: Resilience 5.4/10 · Readiness — the foundation

6.4/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

"You half-see the pattern but don't turn it into tomorrow's aim."

> *On the 17th, a short par 4 you'd bogeyed the same way before, you looked back and half-recognised the pattern — you keep pulling the approach left here. But you didn't turn it into an aim for next time; you just filed a shrug. The same miss, the same bogey, no lesson kept.*

DEFINITION

You give meaning to what the Analysis showed and carry it forward — you store it as an insight for after the round. That way you get to know your strengths and weaknesses over time and know exactly what to work on.

When a miss repeats, you half-recognise it but don't convert it into a plan for next time. So the lesson stays a feeling, and the same bogey keeps coming back.

ON THE CARD · WHEN THE LESSON STAYS A FEELING, THE SAME BOGEY KEEPS RETURNING ON THE SAME HOLE, ROUND AFTER ROUND.

Keeping one lesson means next round starts ahead, not from scratch — your game actually compounds.

IF YOU DO JUST ONE THING **Keep one single lesson from every round, written down.**

Transfer is the difference between noticing you always miss left here and actually aiming right next time.

THE FIVE COMPONENTS OF TRANSFER

Misses teach you · START HERE — WORKING AREA

Letting misses teach you is the piece that still slips — most lessons go unkept.

Look back — WORKING AREA

Looking back at the round works reasonably well; you do notice what went on.

Turn miss to aim — WORKING AREA

Turning a miss into a clear aim for next time is still hit-and-miss.

Find the fix — WORKING AREA

Finding the fix tends to come once you've actually looked back honestly.

Keep one lesson — WORKING AREA

Keeping one lesson is forming, but it often fades before the next round.

It starts with letting the miss teach you: if that doesn't take, your honest look-back and your fix never get turned into a kept aim, and the lesson evaporates.

PRIMARY ADVICE

After the round, write down one miss that keeps happening and the exact aim you'll take next time to beat it — one line, no more.

Extra tip: *Before a hole you've bogeyed the same way before, say your new aim out loud on the tee so the lesson actually travels with you.*

MENTAL DRILL 1

After a round, pick 1 repeating miss and write a one-line fix. Succeeds if it's a concrete aim, not 'play better'. Then read that line on the first tee next round and use it.

MENTAL DRILL 2

On the range, take the miss you keep making on the course and hit 10 balls aimed to counter it. Succeeds if 8 start on the corrected line. Then carry that aim onto the hole where it bit you.

MANTRA FOR THIS STEP — SPARE

One line for when you feel this step. Your main mantra is on your promise sheet.

"One lesson kept, carried forward."

PART 2 · CONTINUED

The four influencing factors

You have now seen your eight steps — the mental routine itself. But how well that routine holds up depends on four factors around it, in shot order: how you weigh **risk** before the shot, how **pressure** loads your swing, how quickly you **bounce back** after the shot, and how **ready** you are — the game you have available today.

They are not steps, but the conditions that decide whether the routine holds when it gets tense. We look at each factor through the same four lenses: Knowledge (what do you know?), Context (what is true here?), Dialogue (say the shot) and Self (are you ready to hit it?). Four factors times four lenses: sixteen sub-factors.

INFLUENCING FACTOR 1 OF 4

Risk appetite

Pre-shot: club, target, line and miss

7.2/10

STRENGTH

A STRENGTH THAT HOLDS YOUR ROUTINE UP UNDER PRESSURE

> *Par 5, your drive sits 200 out with water short-left. You pause, picture the layup to 90 yards, and commit. You pick the target you can actually reach, not the hero line your ego whispers.*

WHAT THIS FACTOR IS

Risk appetite sets the shot before commitment begins: which club, which target, which line and which miss you accept. It is neither courage nor caution. With a poor risk call the atmosphere decides — mood, ego or another player — and the numbers are guessed or ignored. With a good risk call the facts decide: a known carry, a clear target and an acceptable miss, and then full commitment. Judge the decision separately from the result.

Knowledge sets odds · context sets exposure · dialogue states reasons · self carries consequences

A 7.2 is a real strength, Sam. You let facts decide more often than mood, and you stand behind your choice once it's made. That willingness to accept the chosen miss is ahead of your handicap. The next step is sharpening the numbers behind each call.

HOW THIS HITS YOUR ROUTINE

Primarily in the pre-shot, in Focus and Concentration: club, target, line and miss. A good pre-shot produces a target that is specific, reachable and in line with your form. Skewed by risk appetite, the choice turns too aggressive or too cautious — and that happens before the swing, not inside it. In the swing it asks for commitment to the chosen shot; after the shot, for reviewing the decision, not the score.

> *Clear decisions mean fewer blow-up holes and more makeable next shots.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a playing partner over a tough tee shot: does their language explain the choice, or do they just swing and hope?

THE FOUR SUB-FACTORS OF RISK APPETITE

KNOWLEDGE **Calibration** · START HERE — WORKING AREA

Your realistic shot pattern is forming, but some distance numbers still run optimistic.

CONTEXT **Exposure** — STRENGTH

You read lie, wind, and trouble well and adjust to what the hole offers.

DIALOGUE **Rationale** — WORKING AREA

You can explain most choices, though some reasoning stays loose under tougher calls.

SELF **Tolerance** — STRENGTH

You genuinely accept the chosen miss and stay behind it — a clear strength.

PRIMARY ADVICE

Before each full swing, name the club, target, and acceptable miss out loud. Three words, then commit fully.

Extra tip: *Track one round where you log whether the decision was sound, ignoring the outcome. Build evidence for your calls.*

DRILL 1 · ON THE COURSE

On the range, hit ten balls where you first state carry number and target, then swing. If you can't name the number, don't hit. This trains Calibration against guessing.

DRILL 2 · AT HOME

At home, write your realistic carry distance for every club. Honest numbers, not best-ever. Keep the card in your bag for quick reference.

OBSERVATION POINT · CALIBRATION — *"Play your percentage."*

Watch for: Chooses from memory or best-case ability; no reference to stock dispersion or actual percentages.
Ask: What percentage shot is this for you? **Probe:** What evidence from practice or recent rounds supports that?

KEY LINE FOR THIS FACTOR

"You already stand behind your shots — now make the numbers behind them just as solid."

INFLUENCING FACTOR 2 OF 4

Pressure

Swing: tension, tempo and freedom

6.8/10

WORKING AREA

SOLID — WITH ROOM TO SHARPEN FURTHER

> *Closing hole, a stroke to protect, and your grip quietly tightens over the tee shot. Your tempo quickens, the breath shortens. The hole hasn't changed — only the weight you're carrying onto it.*

WHAT THIS FACTOR IS

Pressure makes the shot feel bigger than it is. It loads the routine — especially attention, tension and commitment — and is felt most in the swing: rushing, steering, a tighter grip, a shorter breath. Pressure can come from outside (a match, the cut, the final hole) or be added by yourself (the score, fear of the miss, wanting to prove something). The routine stays the same; only the load increases.

Knowledge locates the limit · context supplies load · dialogue frames meaning · self registers activation

A 6.8 is a solid working level, Sam. You know where pressure usually grabs you and your self-talk often keeps the shot in proportion. The load from tough moments still nudges your tempo more than you'd like. Steadying your activation is the next gain.

HOW THIS HITS YOUR ROUTINE

Primarily in the swing: grip, breath, tempo and freedom. Conviction loses its ease and Trust is the most pressure-sensitive step of all — the urge to steer IS a pressure response. Pressure can already build in the pre-shot (outcome thinking, bodily tension); after the shot it asks you to keep the result in proportion.

> *Controlled arousal keeps your tempo intact when the shot matters most.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a partner on a demanding approach: does their pre-shot stay the same, or does the moment visibly add weight they didn't need?

PART 2 · FACTOR 2 OF 4 · **Pressure** 6.8/10

THE FOUR SUB-FACTORS OF PRESSURE

KNOWLEDGE **Threshold** — STRENGTH

You know your triggers well and can anticipate where pressure tends to appear.

CONTEXT **Demand** · START HERE — WORKING AREA

You read the real demand of a moment fairly, though big holes can inflate it.

DIALOGUE **Narrative** — STRENGTH

Your inner dialogue usually keeps the shot in proportion rather than enlarging it.

SELF **Arousal** — WORKING AREA

Your activation climbs under load — still usable, but not yet fully settled.

PRIMARY ADVICE

On the tee of a high-stakes hole, take one slow exhale before you set your grip. Let tempo lead, not urgency.

Extra tip: *Replace outcome words with a single execution cue — 'smooth' or 'through'. Give your mind the swing, not the scoreboard.*

DRILL 1 · ON THE COURSE

On the range, create pressure: one ball must land in a 15-yard target zone or you restart the set. Notice your breath and grip as the stakes rise, then reset to tempo.

DRILL 2 · AT HOME

At home, practice a four-count exhale while picturing your final hole. Train the breath you'll want when activation climbs on the course.

OBSERVATION POINT · DEMAND — *"Read the stakes."*

Watch for: Treats every shot as equally important — or inflates the real score, format or consequence.
Ask: What does this shot actually require? **Probe:** Which consequence is real, and which is added?

KEY LINE FOR THIS FACTOR

"The shot never grows — only the weight you hand it, so keep it light."

INFLUENCING FACTOR 3 OF 4

Resilience

Post-shot: recover, reset and learn

5·4/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *You chunk a wedge into the bunker, and the next tee shot leaks right because the last one is still playing in your head. The miss hasn't finished — it's steering the shot in front of you.*

WHAT THIS FACTOR IS

Resilience gets you to the next shot. It ends the carryover from the last shot and frees your attention for the next routine. As long as the previous shot is still playing — in your emotion, your tempo or your decisions — the reset is not finished. The reset is complete when you are available again for the shot in front of you.

Knowledge tracks the pattern · context selects the response · dialogue turns attention · self regains state

A 5.4 is a genuine working area, Sam. One poor shot still carries into the next tempo and the next decision more often than you'd want. Your body recovers reasonably, but naming the turning point — closing the shot out loud — is where the gap sits. Small, repeatable resets will move this.

HOW THIS HITS YOUR ROUTINE

Primarily in the post-shot: Evaluation keeps emotion calibrated, Acceptance closes the shot, Analysis turns it into information and Transfer carries one lesson forward. But carryover can also enter the next plan and disturb the next swing.

> *Faster resets stop one miss from becoming three on a hole.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a partner after a missed putt: do they say anything that closes it, or do they carry silence and tension to the next tee?

PART 2 · FACTOR 3 OF 4 · **Resilience** 5.4/10

THE FOUR SUB-FACTORS OF RESILIENCE

KNOWLEDGE **Trajectory** WORKING AREA

You're learning your recovery pattern, but a bad shot can still linger too long.

CONTEXT **Agility** WORKING AREA

You adapt your recovery to context reasonably, matching the response to what the round needs.

DIALOGUE **Reorientation** · START HERE WORKING AREA

Naming a verbal turning point is your softest point — the close often stays unspoken.

SELF **Elasticity** WORKING AREA

Your internal return is developing; body and attention regain a playable state slowly.

PRIMARY ADVICE

After a bad shot, say one short sentence: 'That's done — next shot, this target.' A verbal line in the sand.

Extra tip: *Pick a physical trigger — a slow walk to the next ball — that signals the previous shot is closed and attention is free.*

DRILL 1 · ON THE COURSE

Play nine holes where after every miss you speak one closing sentence before walking on. No replay, no self-talk about score — just name the next playable task and move.

DRILL 2 · AT HOME

At home, rehearse your reset line aloud until it's automatic. One phrase that closes a shot, so it's ready when the round tests you.

OBSERVATION POINT · REORIENTATION — *"Name the next task."*

Watch for: Keeps talking about the previous shot or cannot formulate one clear next task.
Ask: What matters now? **Probe:** Can you say the next job in one sentence?

KEY LINE FOR THIS FACTOR

"The last shot is over the moment you say so — give it a clear ending."

INFLUENCING FACTOR 4 OF 4

Readiness

Whole routine: the game available today

5.0/10

WORKING AREA

A WORKABLE BASE TO BUILD ON

> *You arrive at the first tee rushed, no warm-up, and reach for the shot your best days produce rather than today's. The plan asks for a swing you can't reliably repeat under these conditions.*

WHAT THIS FACTOR IS

Readiness is the game available today. It matches your plan to the body, swing, numbers and equipment actually present. Not ready means the plan asks for a shot you cannot reliably produce today. Ready means you can stand over the ball and execute what has actually been prepared. Play the game you brought to the first tee.

Knowledge builds the base · context tests fit · dialogue formulates the plan · self provides presence

A 5.0 is a working area, Sam. Some of your preparation is in place, but matching the plan to the game you actually brought today is inconsistent. Turning an honest read into a clear plan, and arriving fully present over the ball, is where this grows. These are learnable habits.

HOW THIS HITS YOUR ROUTINE

Readiness runs through the whole routine: an available body, numbers and shot in the pre-shot; an available swing and trust in the swing; and available attention to learn in the post-shot.

> *Playing today's game, not your best game, lowers your big numbers.*

OBSERVATION POINT · WATCH SOMEONE ELSE

Watch a partner over the ball: are they gathered and clear, or scattered and half-committed before they diagnose today's game into a plan?

PART 2 · FACTOR 4 OF 4 · **Readiness** 5.0/10

THE FOUR SUB-FACTORS OF READINESS

KNOWLEDGE **Foundation** WORKING AREA

Your preparation and warm-up base is forming but not yet consistent round to round.

CONTEXT **Fit** WORKING AREA

Matching today's game to course and conditions still slips toward the ideal version.

DIALOGUE **Formulation** · START HERE WORKING AREA

Turning an honest read into a clear, usable plan is your softest point here.

SELF **Presence** WORKING AREA

Your gathered presence over the ball wavers; full commitment isn't always there.

PRIMARY ADVICE

Before the round, name three shots you can trust today and three to avoid. Build the plan around what's actually present.

Extra tip: *On the first tee, take ten seconds to gather — feet set, one breath, one intention — before you run the routine.*

DRILL 1 · ON THE COURSE

On the range, run a short warm-up where you grade each club 'trusted' or 'shaky' today, then play the course only with the trusted ones in your mind.

DRILL 2 · AT HOME

At home, write a two-line plan before you leave: how you feel, and the one shot shape you'll lean on. Turn the read into instructions.

OBSERVATION POINT · FORMULATION — *"Call today's game."*

Watch for: Cannot diagnose present readiness or state one plan that fits current capacity and conditions.

Ask: What game have you brought today? **Probe:** Say one plan that fits it.

KEY LINE FOR THIS FACTOR

"Play the game you brought to the first tee, not the one you wish you had."

ONE EXTRA INTERVENTION

Learning by observing

With each of your four factors comes an **observation point**. That is no side note — it is an intervention in itself. Your sharpest insight into your own mental game often comes not from looking inward, but from *someone else* watching.

When you deliberately watch how a playing partner handles pressure, a missed putt, a risky decision, two things happen at once. You see a pattern you do not spot so easily in yourself — the tension in the shoulders on the first tee, the tempo that changes after a bad shot, the club picked too quickly. And right at that moment you become more aware of your own routine and your own factors. Observing makes the abstract concrete.

> *The beauty is: it costs you nothing extra. You already play in company. By watching one thing in someone else for one round at a time, you build an eye for the mental game — which you then turn on yourself. What you learn to spot in others, you recognise in yourself.*

HOW TO GO ABOUT IT

Pick one factor per round. In yourself or in one playing partner, watch the observation point that belongs to it. Fact first — what a camera would capture — and only then the meaning. Wait for three comparable moments before you call it a pattern. After the round, ask yourself: what did I see, and did I recognise it in myself too?

FINALLY

This is *yours now*

You already know how to give a shot everything, Sam — that fearlessness is rare and it's yours. What this report hands you is the other half: the quiet skill of setting a miss down as completely as you let a swing go. You know now exactly who you are on the course, and exactly where the next bit of growth lives. That knowing is the start — the real work, and the real fun, begins right here.

WANT TO GO FURTHER?

The next step *in your story*

Reading a report changes nothing on the course yet — you know that. The real gain, and the real fun, only start when you pick one thing and work on it. And you do not have to do that alone.

For that, MentalRoutine builds from exactly this profile a personal **Training report**: a personal workbook of around ten pages, tuned to your scores and your level of play. No generic tips, but exercises, mantras and stories that fit where you stand now — the logical next step after what you have just read about yourself.

YOUR PERSONAL ADVICE

Where you are best *placed to begin*

We laid your full profile side by side: your eight steps with their forty components, and your four influencing factors. Below are the three topics where training pays off most for you now — your two biggest opportunities and your strongest step. The same three are waiting as advice in your portal.

YOUR THREE RECOMMENDED TOPICS

Each its own training report — together exactly the three included with your assessment.

1. Acceptance
start with: Let go

IMPROVE
score 5.6/10

2. Analysis
start with: Mental or technical?

IMPROVE
score 6.0/10

3. Trust
start with: Don't steer

LEVERAGE
score 7.8/10

OR CHOOSE AN INFLUENCING FACTOR

You can also spend one of your three reports on a factor. For you, **Readiness** (5.0/10) is the obvious choice — start there with **Formulation** — *"Call today's game."*

HOW TO START

Start with the first topic: that is where the most is to be gained. Rather go another way? In your portal you choose freely from all twelve topics.

Your training reports are waiting in your portal — that is where you choose what to pick up first.

Go to the portal →

AFTER THIS REPORT

How your *training works*

HOW A TRAINING REPORT WORKS

A STEP OF YOUR ROUTINE

Trains one of your eight steps through five angles, tuned to your score on each component. Choose this if you want to work on a part of your routine.

AN INFLUENCING FACTOR

Trains one of your four factors through the four lenses: knowledge, context, dialogue and self. Choose this if the terrain around your routine costs you most.

> Nothing extra to arrange: three training reports are included with your assessment, and you choose them yourself from all twelve topics — your eight steps and your four factors. Everything is ready in your portal, at your own pace.

TWO WAYS TO GROW

IMPROVE

With a lower score. The report motivates and builds: small, doable steps that make your weak spot stronger bit by bit. This is often the quickest gain.

LEVERAGE

With a high score. The report inspires: how do you use a strength you already have even more deliberately, so it wins you shots on the holes that count?

WHEN TO MEASURE AGAIN?

Give yourself 3 to 6 months to work with your training reports and the advice in this report, and make sure you really practise in that period — count on at least 6 to 10 rounds or 8 to 12 practice sessions where you work on it deliberately. Then take the MentalRoutine Assessment again. Where you truly changed something, you will see it as a clear shift in your profile — not in a single decimal, but in the direction a whole step moves.

"The greens are not going anywhere. The game will always be here for you. What you choose to do with what you've learned — that's entirely yours."

— MENTALROUTINE · WWW.MENTALROUTINE.COM
